Pass Guaranteed Quiz Appian - ACD201 - High Pass-Rate Appian Senior Developer Valid Test Simulator

A lot of things can't be tried before buying or the product trial will charge a certain fee, but our ACD201 exam questions are very different, you can try it free before you buy it. It's like buying clothes, you only know if it is right for you when you try it on. In the same way, in order to really think about our customers, we offer a free trial version of our ACD201 study prep for you, so everyone has the opportunity to experience a free trial version of our ACD201 learning materials.

Appian Senior Developer Sample Questions (Q54-Q59):

NEW QUESTION # 54

You're developing a user input form for a government services application that includes a file upload component. If the uploaded file is a multimedia file (for example: .MP4, .MOV or .WAV), the customer wants these uploaded to Microsoft SharePoint instead.

What is the best way to achieve this requirement?

- A. Use the out-of-the-box Appian Connected System, but since it does not have any pre-built connected systems, you will need to use either a HTTP or OpenAI Connected System to connect with SharePoint.
- B. Develop a connected system plug-in given SharePoint has an extensive API that cannot easily be resolved using the Appian out-of-the-box Connected System.
- C. Use the out-of-the-box Appian Connected System as it has a pre-built connected system to SharePoint to provide a guided experience for designers to send and receive data.**

Answer: C

Explanation:

Appian provides an out-of-the-box pre-built connected system for SharePoint, allowing you to integrate file uploads to SharePoint with a guided experience for configuration-making this the best way to fulfill the requirement.

NEW QUESTION # 55

You need to configure Appian user authentication against an external directory server. The requirement is to use the same corporate logon information without single sign-on (SSO).

Which authentication type should you use?

- A. OpenID Connect authentication
- B. LDAP authentication**
- C. PIIE user authentication

Answer: B

Explanation:

LDAP authentication allows users to log in with their corporate credentials by authenticating against an external directory server, without requiring single sign-on (SSO).

NEW QUESTION # 56

You're creating a synced record type which will store read-only data from an external web service. Data in the external system is updated nightly, and the latest information must be available to users in the morning.

Currently there are approximately 150,000 entries in the external system, and this number is not expected to change significantly. There is an existing integration object and associated expression rule, which when called returns the complete dataset from the external system.

What are two configurations that you must apply to ensure that the latest and complete record set is available?

(Choose two.)

- A. Modify the integration object and associated expression rule to return batches of 1000 based on a batch number passed in from the record type.
- B. Set all record fields to evaluate in real-time so that the latest information is always retrieved from the web service.
- C. Within the Source Filters settings on the record type, disable the row limit option so that all entries can be retrieved from the external system.
- D. Within the record type, schedule a full sync to occur nightly after the data is refreshed in the external system.

Answer: C,D

Explanation:

Scheduling a nightly full sync ensures the record type is updated with the latest data after the external system refreshes.

Disabling the row limit in Source Filters allows the complete dataset to be retrieved and synced, ensuring all entries are available.

NEW QUESTION # 57

An insurance company's product details are currently distributed across numerous database tables, encompassing over 60 to 70 fields.

You need to implement a product comparison tool for business users to compare up to three insurance products simultaneously, with all the product details in a tabular format.

Refer to the following sample format:

Which object should be used to transform the data into the required format?

- A. VCCCiews
- B. Stored procedure
- C. Record type with relationships

Answer: A

Explanation:

Database views are ideal for transforming complex, distributed product data into a single, flattened structure tailored for reporting or comparison. In this case, a view can pivot the 60-70 fields and organize them by attribute (e.g., Name, Type, Premium) across multiple product columns, enabling a tabular comparison layout like the one shown. Views also optimize performance and reduce transformation overhead in the interface layer.

NEW QUESTION # 58

You're conducting a design review.

You identify slow-performing expression rules querying a specific data store, and need to understand the "number of operations against data stores."

Which metric from the data_store_details.csv file is helpful to you?

- A. Query Count
- B. TCCCTotal Count
- C. Execute Count

Answer: A

Explanation:

The "Query Count" metric in the data_store_details.csv file indicates the number of operations (queries) performed against data stores, helping you analyze data store usage.

NEW QUESTION # 59

Our ACD201 learning materials provide multiple functions and considerate services to help the learners have no inconveniences to use our product. We guarantee to the clients if only they buy our ACD201 study materials and learn patiently for some time they will be sure to pass the ACD201 test with few failure odds. The price of our product is among the range which you can afford and after you use our study materials you will certainly feel that the value of the product far exceed the amount of the money you pay. Choosing our ACD201 Study Guide equals choosing the success and the perfect service.
