## Salesforce Certified MuleSoft Platform Integration Architect Sample Questions (Q37-Q42):

### NEW QUESTION # 37

Which types of testing are crucial for verifying that Mule applications meet functional and non-functional requirements? (Choose Two)

- A. Performance testing under varied load scenarios.
- B. Visual testing of application interfaces.
- C. Unit testing individual components.
- D. Integration testing across multiple modules.

Answer: A,D

### NEW QUESTION # 38

What does the OS Connector primarily facilitate in a Mule application?

- A. High-volume data transactions
- B. Real-time data processing
- C. Long-term data warehousing
- D. Short-lived data persistence between flow executions

**Answer: D**

### NEW QUESTION # 39

A developer is developing an MUnit test suite for a Mule application. This application must access third-party vendor SOAP services. In the CI/CD pipeline, access to third-party vendor services is restricted. Without MUnits, a successful run and coverage report score is less than the threshold, and builds will fail.

Which solution can be implemented to execute MUnits successfully?

- A. In MUnits, mock a SOAP service invocation and provide a mock response for those calls
- B. In MUnits, invoke a dummy SOAP service to send a mock response for those calls
- C. In the CI/CD pipeline, create and deploy mock SOAP services
- D. For the CI/CD pipeline, add a skip clause in the flow for invoking SOAP services

**Answer: A**

### NEW QUESTION # 40

How do redelivery policies enhance message reliability in Mule applications? (Choose Two)

- A. They prevent messages from being lost during transmission.
- B. They attempt to redeliver messages a specified number of times before triggering an error handling routine.
- C. They guarantee message delivery in the correct order.
- D. They ensure messages are only delivered once.

**Answer: A,B**

### NEW QUESTION # 41

How does the Scatter-Gather router benefit Mule application design?

- A. It routes each message to the first successful route only.
- B. It simplifies transaction management.
- C. It guarantees the order of message processing.
- D. It collects responses from multiple routes and aggregates them.

**Answer: D**

### NEW QUESTION # 42

.....
