We have hired professional staff to maintain NSE7_SSE_AD-25 practice engine and our team of experts also constantly updates and renew the question bank according to changes in the syllabus. With NSE7_SSE_AD-25 learning materials, you can study at ease, and we will help you solve all the problems that you may encounter in the learning process. If you have any confusion about our NSE7_SSE_AD-25 Exam Questions, just contact us and we will help you out.

The Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator (NSE7_SSE_AD-25) practice questions have a close resemblance with the actual Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator (NSE7_SSE_AD-25) exam. Our Fortinet NSE7_SSE_AD-25 exam dumps give help to give you an idea about the actual Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator (NSE7_SSE_AD-25) exam. You can attempt multiple Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator (NSE7_SSE_AD-25) exam questions on the software to improve your performance.

New NSE7_SSE_AD-25 Test Labs & NSE7_SSE_AD-25 Test Duration

The passing rate of our NSE7_SSE_AD-25 training quiz is 99% and the hit rate is also high. Our professional expert team seizes the focus of the exam and chooses the most important questions and answers which has simplified the important NSE7_SSE_AD-25 information and follow the latest trend to make the client learn easily and efficiently. We update the NSE7_SSE_AD-25 Study Materials frequently to let the client practice more and follow the change of development in the practice and theory.

Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator Sample Questions (Q35-Q40):

NEW QUESTION # 35

What are two advantages of using zero-trust tags? (Choose two.)

- A. Zero-trust tags can be assigned to endpoint profiles based on user groups.
- B. Zero-trust tags can help monitor endpoint system resource usage.
- C. Zero-trust tags can determine the security posture of an endpoint.
- D. Zero-trust tags can be used to allow or deny access to network resources.

Answer: C,D

Explanation:

Zero-trust tags assess endpoint compliance based on defined posture rules and are used in access policies to control whether a device is permitted or denied access to specific network resources.

NEW QUESTION # 36

What is the maximum number of Secure Private Access (SPA) service connections (SPA hubs) supported in the SPA use case? (Choose one answer)

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

Explanation:

In recent versions of FortiSASE (starting from version 24.4 and later), the platform has increased its scalability to support larger enterprise environments.

* **Maximum Hub Support:** According to the FortiSASE Mature Administration Guide and the FortiSASE 25.3.148 Feature Release Notes, administrators can now configure a maximum of 12 SPA Service Connections (SPA hubs). Previously, this limit was restricted to 4 hubs.

* **Scalability for Large Enterprises:** This enhancement allows organizations with complex, geographically dispersed networks-such as those with multiple regional datacenters or cloud hubs-to integrate up to 12 distinct FortiGate SD-WAN hubs into their SASE infrastructure.

* **Service Connection Licensing:** Each SPA hub requires a dedicated FortiGate SPA Service Connection license. In MSSP environments using FortiCloud Organizations, a single FortiSASE instance can inherit these licenses from a root OU, supporting up to the same cumulative maximum of 12 service connections.

* **Routing and Performance:** These 12 hubs form the "Private Access" backbone, where FortiSASE security PoPs act as spokes. The use of BGP (either per-overlay or on loopback) ensures that traffic is dynamically routed to the optimal hub based on the destination network and defined SLA priorities.

NEW QUESTION # 37

In which two ways does FortiSASE help organizations ensure secure access for remote workers? (Choose two.)

- A. It uses the FortiCloud organizational units to assign endpoint profiles to remote workers.
- B. It offers zero trust network access (ZTNA) capabilities.
- C. It uses the identity and access management (IAM) portal to validate the identities of remote workers.
- D. It secures traffic from endpoints to cloud applications.

Answer: B,D

Explanation:

FortiSASE ensures secure access for remote workers by protecting traffic between endpoints and cloud applications and enforcing ZTNA policies that validate user identity and device posture before granting access to corporate resources.

NEW QUESTION # 38

Which secure internet access (SIA) use case minimizes individual workstation or device setup, because you do not need to install FortiClient on endpoints or configure explicit web proxy settings on web browser-based endpoints?

- A. SIA for agentless remote users
- **B. SIA for site-based remote users**
- C. SIA for SSLVPN remote users
- D. SIA for inline-CASB users

Answer: B

Explanation:

In this use case, secure internet access (SIA) is configured at the site level rather than on individual devices. This approach eliminates the need for individual endpoint setup, such as installing FortiClient or configuring web proxy settings on each workstation or device. It allows centralized management and secure internet access for all users at the site level, simplifying deployment and maintenance.

NEW QUESTION # 39

An organization needs to resolve internal hostnames using its internal rather than public DNS servers for remotely connected endpoints. Which two components must be configured on FortiSASE to achieve this?

(Choose two.)

- **A. Split tunnelling destinations**
- B. DNS filter
- C. SSL deep inspection
- **D. Split DNS rules**

Answer: A,D

Explanation:

To resolve internal hostnames using internal DNS servers for remotely connected endpoints, the following two components must be configured on FortiSASE:

* Split DNS Rules:

* Split DNS allows the configuration of specific DNS queries to be directed to internal DNS servers instead of public DNS servers.

* This ensures that internal hostnames are resolved using the organization's internal DNS infrastructure, maintaining privacy and accuracy for internal network resources.

* Split Tunneling Destinations:

* Split tunneling allows specific traffic (such as DNS queries for internal domains) to be routed through the VPN tunnel while other traffic is sent directly to the internet.

* By configuring split tunneling destinations, you can ensure that DNS queries for internal hostnames are directed through the VPN to the internal DNS servers.
