問題 #26
Refer to the exhibit.
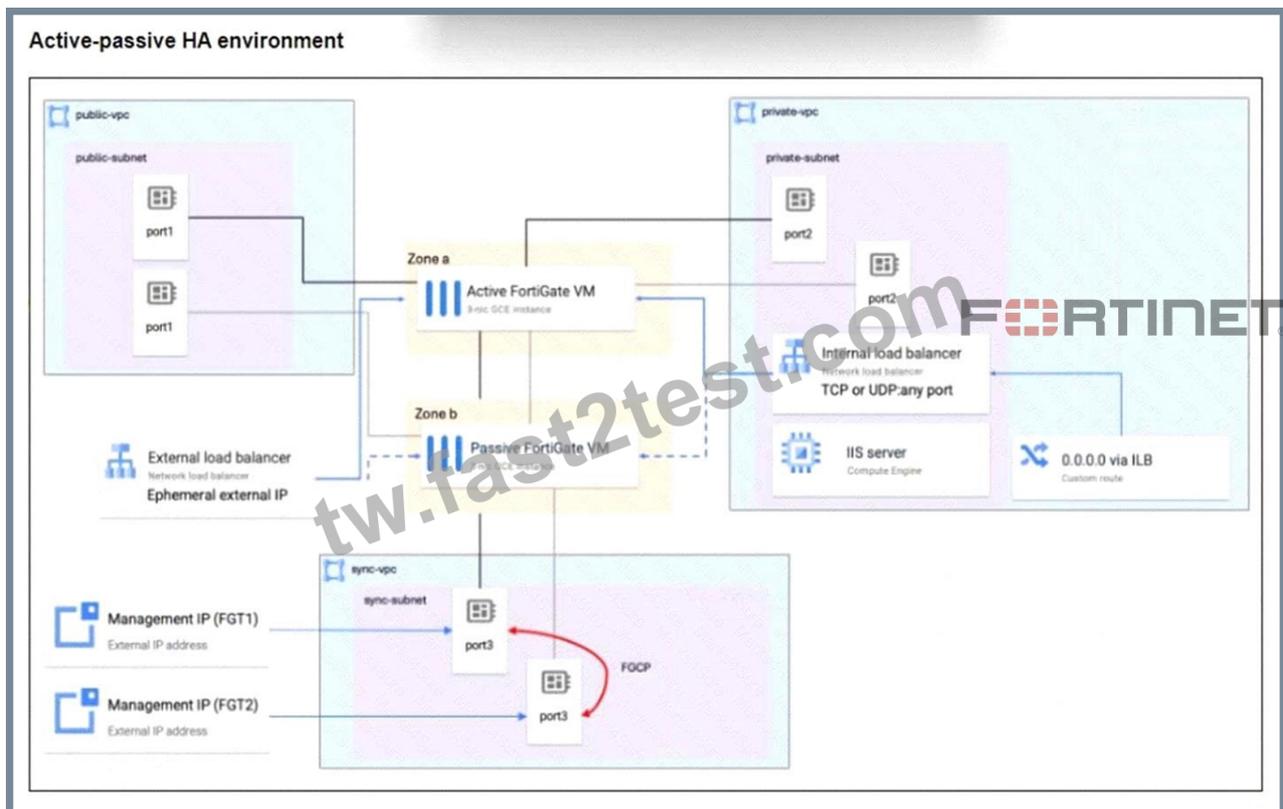

Which three things happen during a failover in which the passive FortiGate VM becomes the master cluster member in an active-passive high-availability (HA) environment? (Choose three.)

- A. The health check for the passthrough load balancers forces internal traffic to route to port2 of the new active cluster member.
- B. The health check status will indicate that the old active cluster member is unhealthy.
- C. The custom route is updated using API calls to forward all traffic to port2 of the new active cluster member device.
- D. The Management IP address moves from port3 of the current active member to port3 of the new active cluster member.
- E. The health check ensures that incoming traffic to the ephemeral external IP address of the load balancer is forwarded to the new active cluster member.

答案：B,C,E

解題說明：
The load balancer health check detects the failure of the old active member and forwards traffic to the new active member.
The health check reflects the status change, marking the previous active as unhealthy.
API calls update custom routes to redirect traffic to the new active cluster member's internal interface (port2).

問題 #27
Google Cloud network services offer vast functionality and inter-connectivity between the cloud and on- premises networks.
Which three additional functions does FortiGate offer when deployed in Google Cloud to complement the native services offered by Google Cloud? (Choose three.)

- A. SSL inspection
- B. OSPF over IPSec
- C. Web filtering
- D. Secure SD-WAN with application visibility
- E. SSL VPN

答案：A,D,E

解題說明：
FortiGate provides SSL VPN capabilities for secure remote access.
It offers SSL inspection to decrypt and inspect encrypted traffic for threats.
FortiGate supports Secure SD-WAN with deep application visibility and control, enhancing network performance and security

beyond native Google Cloud services.

Which Fortinet proprietary protocol do you use when deploying an active-passive high-availability (HA) cluster in Google Cloud?

- A. Broadcast FGCP
- B. Multicast FGSP
- C. Unicast FGCP
- D. Anycast FGSP

答案：C

解題說明：
Unicast FGCP (FortiGate Clustering Protocol) is the proprietary protocol used for active-passive HA clusters in Google Cloud, enabling state synchronization and failover communication between cluster members.

Refer to the exhibit.

An administrator is troubleshooting an issue when a high-availability (HA) failover occurs.
Which conclusion can you draw from the debug output?

- A. Both cluster members are located in the same zone.
- B. The HA cluster is deployed using the software-defined network (SDN) connector.
- C. The health check has successfully updated the internal custom route to forward all internal traffic to 172.16.1.3.
- D. The HA cluster is accessible using HTTPS on 34.68.13.24 and 34.66.4.139.

答案：C

解題說明：
The debug output shows the internal route being updated and moved to the new next hop (172.16.1.3), indicating the health check and failover process successfully redirected internal traffic to the active HA node.

An organization has decided to deploy an active-active high-availability cluster in Google Cloud.
Which three load balancing features are critical to the successful deployment of the cluster? (Choose three.)

- A. The forwarding rule for the internal passthrough network load balancer as the next hot for custom routes

- B. The symmetric hashing of the internal passthrough network load balancer
- C. The health check used by the internal and the external passthrough network load balancer
- D. The L3_DEFAULT protocol in the forwarding rule of the internal passthrough network load balancer
- E. The session termination of the external passthrough network load balancer

答案：A,B,C

解題說明：
Health checks ensure load balancers route traffic only to healthy cluster members.
Forwarding rules act as next hops in routing, directing traffic appropriately within the HA cluster.
Symmetric hashing ensures consistent and balanced traffic distribution across cluster members, critical for active-active deployments.
