So we can say bluntly that our ANVE simulating exam is the best. Our effort in building the content of our ANVE Study Materials lead to the development of learning guide and strengthen their perfection. To add up your interests

and simplify some difficult points, our experts try their best to design our study material and help you understand the learning guide better.

## Axis Network Video Exam Sample Questions (Q41-Q46):

### NEW QUESTION # 41

When dealing with a poorly lit scene, which of the following options would most improve image quality?

- A. Adjusting brightness
- B. Adjusting exposure settings
- C. Adding light
- D. Changing camera placement

**Answer: C**

Explanation:

When dealing with a poorly lit scene, adding light is the most effective option to improve image quality.

Proper illumination ensures that the camera's sensor can capture clear and detailed images, reducing noise and enhancing visibility.

While adjusting exposure settings, brightness, or changing camera placement can help, they are secondary to the fundamental requirement of adequate lighting.

### NEW QUESTION # 44

If an object is placed 1 m (3 ft) away from a light source and the lux level is 3200 lux, what is the lux level at a distance of 8 m (24 ft)?

- A. 200 lux
- B. 50 lux
- C. 10 lux
- D. 400 lux

**Answer: B**

Explanation:

If an object is placed 1 meter (3 feet) away from a light source with a lux level of 3200 lux, the lux level decreases according to the inverse square law of light. At a distance of 8 meters (24 feet), the lux level can be calculated as:

$$\text{New Lux Level} = 3200 \text{ lux} \left(\frac{1}{8}\right)^2 = 3200 \text{ lux} \frac{1}{64} = 50 \text{ lux}$$
