People always feel fear of the unknown thing and cannot handle themselves with a sudden change. However, our AWS-Developer exam questions can stand by your side. And we are determined to devote ourselves to serving you with the superior AWS-Developer Study Materials in this career. Here are some features of our AWS-Developer learning guide in our free demos which you can free download, you can understand in detail and make a choice.

The AWS-Developer exam is an important certification for developers who want to demonstrate their expertise in working with AWS. By passing AWS-Developer exam, developers can demonstrate to potential employers or clients that they have the skills and knowledge necessary to build and maintain applications on AWS. In addition, the certification can help developers advance their careers and increase their earning potential. Overall, the AWS-Developer exam is an important credential for any developer who is working with AWS and wants to showcase their expertise in this area.

To become certified, candidates must pass a 130-minute exam consisting of multiple-choice and multiple-response questions. AWS-Developer Exam is available in multiple languages and can be taken at a testing center or online. The AWS-Developer certification is valid for two years and can be renewed by passing a recertification exam or earning a higher-level certification. Achieving AWS-Developer certification demonstrates a candidate's ability to design, develop, deploy, and maintain applications on the AWS platform, making them a valuable asset to any organization using cloud computing technology.

#### NEW QUESTION # 154

You are managing the AWS account of a big organization. The organization has more than 1000+ employees and they want to provide access to the various services to most of the employees. Which of the below mentioned options is the best possible solution in this case?

- A. The user should create IAM groups as per the organization's departments and add each user to the group for better access control
- B. The user should create an IAM role and attach STS with the role. The user should attach that role to the EC2 instance and setup AWS authentication on that server
- C. Attach an IAM role with the organization's authentication service to authorize each user for various AWS services
- D. The user should create a separate IAM user for each employee and provide access to them as per the policy

**Answer: C**

#### NEW QUESTION # 155

A developer is creating AWS CloudFormation templates to manage an application's deployment in Amazon Elastic Container Service (Amazon ECS) through AWS CodeDeploy. The developer wants to automatically deploy new versions of the application to a percentage of users before the new version becomes available for all users.

How should the developer manage the deployment of the new version?

- A. Deploy the new version in a new CloudFormation stack. After testing is complete, update the application's DNS records for the new stack.
- B. Modify the CloudFormation template to include a Transform section and the AWS::CodeDeploy::BlueGreen hook.
- C. Run CloudFormation stack updates on the application stack to deploy new application versions when they are available.
- D. Create a nested stack for the new version. Include a Transform section and the AWS::CodeDeploy::BlueGreen hook.

**Answer: B**

#### NEW QUESTION # 156

A Development team currently supports an application that uses an in-memory store to save accumulated game results. Individual results are stored in a database. As part of migrating to AWS, the team needs to use automatic scaling. The team knows this will yield inconsistent results.

Where should the team store these accumulated game results to BEST allow for consistent results without impacting performance?

- A. Amazon ElastiCache
- B. Amazon S3
- C. Amazon Kinesis
- D. Amazon RDS

**Answer: A**

### NEW QUESTION # 157

A developer at a company recently created a serverless application to process and show data from business reports. The application's user interface (UI) allow users to select and start processing the files. The UI displays a message when the result is available to view. The application uses AWS Step Functions with A Lambda functions "to process the files. The developer used Amazon API Gateway and Lambda functions to create an API to support the UI.

The company's UI team reports that the request to process a file is often returning timeout errors because of the size or complexity of the files. The UI team w< API to provide an immediate response so that the UI can display a message while the files are being processed. The backend process that is invoked by the A needs to send an email message when the report processing is complete. What should the developer do to configure the API to meet these requirements?

- A. Change the API Gateway route to add an X-Amz-Target header with a static value of 'Async' in the integration request. Deploy the API Gateway stag apply the changes.
- **B. Change the API Gateway route to add an X-Amz-Invocation-Type header with a static value of 'Event' in the integration request. Deploy the API Gatt stage to apply the changes.**
- C. Change the configuration of the Lambda function that implements the request to process a file. Configure the maximum age of the event so that the Lambda function will run asynchronously.
- D. Change the API Gateway timeout value to match the Lambda function timeout value. Deploy the API Gateway stage to apply the changes.

**Answer: B**
