

350-601 Valid Exam Registration, Certification 350-601 Dumps

What's more, part of that PrepAwayETE 350-601 dumps now are free: <https://drive.google.com/open?id=1x3nPhSZVPUGQ2dxTZaoWfR2iwwzFgoe>

Our 350-601 study materials just need you to memorize all keypoints of the knowledge of the real exam. It is unnecessary to review all irrelevant knowledges. At present, our 350-601 exam questions have helped thousands of people pass the exam and obtain the certificate. Also, the passing rate of our 350-601 Training Materials is the highest according to our investigation. None of the other exam braindumps in the market has the pass rate high as 98% to 100% as our 350-601 learning quiz.

Cisco 350-601 exam is intended for data center professionals who have at least three to five years of experience working with Cisco data center technologies. Implementing Cisco Data Center Core Technologies (350-601 DCCOR) certification is ideal for individuals who are responsible for designing and deploying data center solutions, as well as those who are involved in the day-to-day management and operation of data center environments. By earning this certification, candidates will have a deeper understanding of data center technologies and be better equipped to handle complex data center challenges.

Cisco 350-601, also known as Implementing Cisco Data Center Core Technologies (350-601 DCCOR) exam is designed to test the knowledge and skills of candidates who want to become Cisco Certified Network Professional (CCNP) Data Center certified. 350-601 Exam covers a wide range of topics related to data center infrastructure, virtualization, automation, and security. Passing 350-601 exam will validate a candidate's knowledge and ability to implement and manage data center technologies.

Certification 350-601 Dumps | 350-601 Real Exams

Whatever your professional, working towards a Implementing Cisco Data Center Core Technologies (350-601 DCCOR) 350-601 certification or designation takes a significant amount of effort and time. Once you have put all your effort, and investment and prepared well then you will be in a position to pass the Implementing Cisco Data Center Core Technologies (350-601 DCCOR) 350-601 Certification Exam. But once you get success in the Implementing Cisco Data Center Core Technologies (350-601 DCCOR) 350-601 test you'll be eligible to avail all the personal and professional benefits associated with Implementing Cisco Data Center Core Technologies (350-601 DCCOR) 350-601 certification.

Cisco 350-601 (Implementing Cisco Data Center Core Technologies (350-601 DCCOR)) exam is a certification exam that tests the candidate's knowledge of data center technologies. It is one of the most popular exams for IT professionals who want to work with data center technologies. 350-601 Exam is designed to validate the skills required to implement and maintain data center technologies.

Cisco Implementing Cisco Data Center Core Technologies (350-601 DCCOR) Sample Questions (Q219-Q224):

NEW QUESTION # 219

An engineer must configure a Cisco MDS 9000 Series Switch for traffic analysis from the storage array. The storage array is connected to the interface fc2/1 in VSAN 10 and the traffic analyzer to fc4/2. The capture file must include ingress and egress traffic between the switch and the storage array. Also, only traffic in VSAN 10 must be captured.

Which configuration set meets these requirements?

- A. interface fc4/2
switchport mode SD
no shutdown
!
span session 1
source interface fc2/1
destination interface fc4/2
source filter vsan 10
- B. interface fc4/2
switchport mode auto
no shutdown
!
span session 1
source interface fc2/1 rx
destination interface fc4/2
source filter vsan 10
no suspend
- C. interface fc4/2
switchport mode ST
no shutdown
!
span session 1
source interface fc2/1
destination interface fc4/2
source filter vsan 10
- D. interface fc4/2
switchport mode trunk
switchport trunk allow vsan 10
no shutdown
!
span session 1
source interface fc2/1 tx
destination interface fc4/2 rx
no suspend

Answer: A

NEW QUESTION # 220

A customer has a requirement for an automation solution that supports periodically acquiring configuration from a centralized server and aligning UCS servers to their desired state. Which open-source tool meets these requirements?

- A. Puppet
- B. Terraform
- C. SaltStack
- D. Kubernetes

Answer: A

Explanation:

Explanation

"Overview of Puppet architecture: [...] After it receives a catalog, the Puppet agent applies the catalog by checking each resource that the catalog describes. If it finds any resources that are not in their desired state, it makes any changes necessary to correct them"

https://www.cisco.com/c/dam/en/us/products/collateral/servers-unified-computing/ucs-c-series-rackservers/whitepaper_c11-740103.pdf

<https://www.cisco.com/c/dam/en/us/products/collateral/servers-unified-computing/ucs-devops-integration-sol-brfrom-DCCOR-book-under-Puppet-section> The operation of the Puppet agent involves periodically connecting to the Puppet master, which in turn compiles and sends a configuration manifest to the agent. The agent reconciles this manifest with the current state of the node and updates state that is based on differences.

NEW QUESTION # 221

Which two statements describe the process of performing an EPLD upgrade on a Cisco MDS 9000 Series Switch? (Choose two.)

- A. The upgrade is performed on the active supervisor.
- **B. The upgrade is performed from the standby supervisor module.**
- C. If an upgrade is interrupted, the upgrade continues after a connection is restored.
- D. Modules must be online to be upgraded.
- **E. The upgrade process disrupts only the module that is being upgraded.**

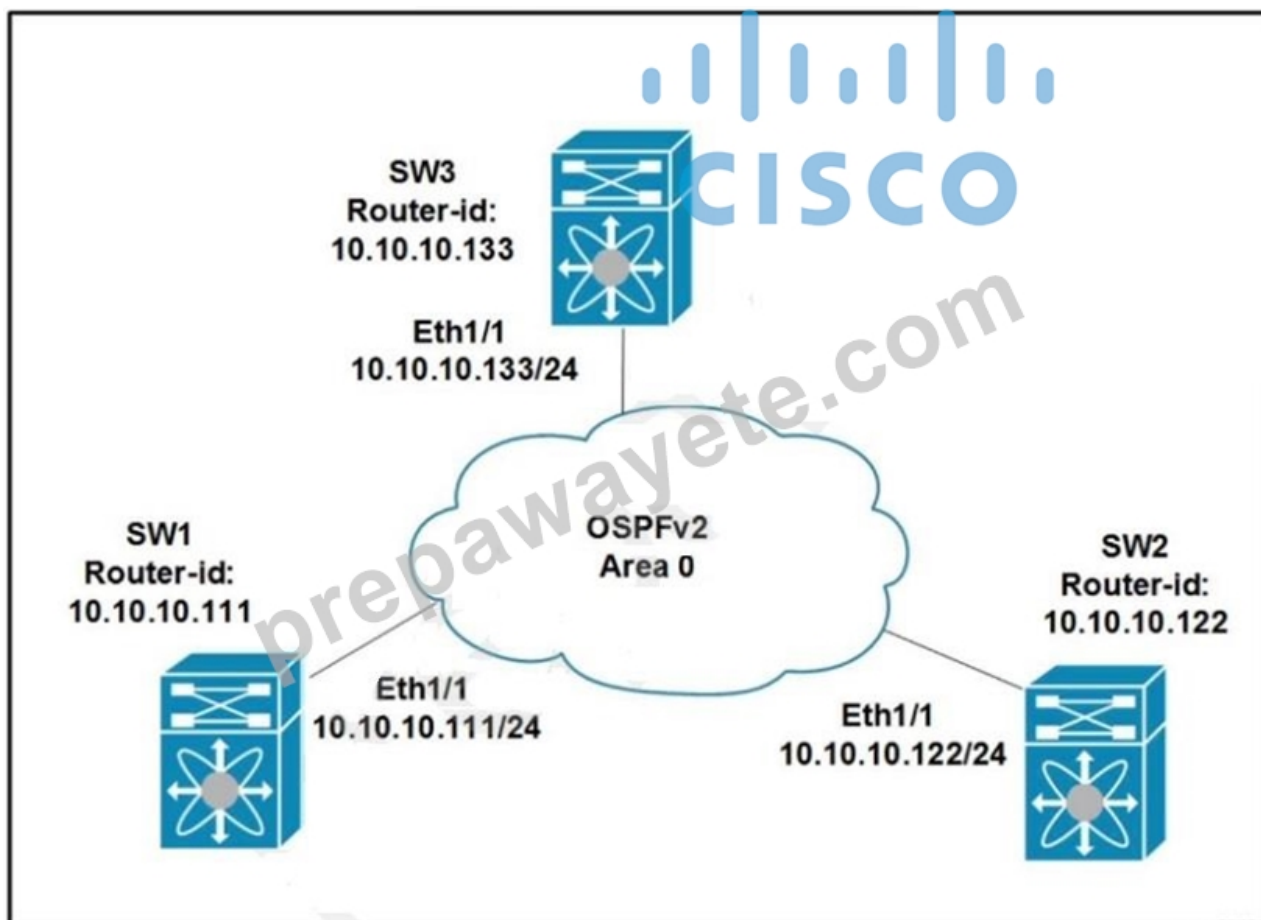

Answer: B,E

Explanation:

Section: Compute

NEW QUESTION # 222

Refer to the exhibit.

All switches are configured with the default OSPF priority. Which configuration should be applied to ensure that the SW2 Cisco Nexus switch controls the LSA floods and advertises the network to the remaining nodes in the OSPFv2 area?

- A. SW2# configure terminal SW2 (config)# interface ethernet 1/1 SW2 (config-if)# ip ospf priority 1
- B. SW2# configure terminal SW2 (config)# router ospf 1 SW2 (config-router)# router-id 10.10.10.22
- **C. SW2# configure terminal SW2 (config)# interface ethernet 1/1 SW2 (config-if)# ip ospf priority 255**
- D. SW2# configure terminal SW2 (config)# interface ethernet 1/1 SW2 (config-if)# ip ospf priority 0

Answer: C

Explanation:

In OSPF, the router with the highest priority on a network becomes the Designated Router (DR), responsible for generating LSAs for the network. By default, all Cisco routers have an OSPF priority of 1. To ensure that SW2 becomes the DR and controls the LSA floods, its priority needs to be the highest in the OSPFv2 area.

The command in option A sets the OSPF priority to the maximum value of 255, which will make SW2 the most likely candidate to be elected as the DR, provided that no other router has a higher priority or a higher router ID if priorities are equal.

References := This explanation is based on the OSPF election process as described in Cisco's OSPF design guide and the Implementing and Operating Cisco Data Center Core Technologies (DCCOR) course materials.

For detailed information, please refer to these resources.

NEW QUESTION # 223

The engineer must configure SPAN on a cisco Nexus 5000 Series switch to get a capture of the traffic from these applications for an in-depth packet analysis. Which two characteristics must be considered? (Choose two.)

- **A. The rx/tx option is available for VLAN or VSAN SPAN sessions.**
- B. Only Ethernet, FC, vFC, port channel port types can be a destination SPAN port.
- C. SPAN source port can be monitored in multiple SPAN sessions.
- **D. A SPAN source port cannot be a destination SPAN port.**
- E. The Ethernet, FC, vFC, port channel, SAN port channel can be used as SPAN source ports.

Answer: A,D
