# Databricks-Certified-Data-Engineer-Associate Test Dates | Databricks-Certified-Data-Engineer-Associate Latest Exam Labs

Our Databricks-Certified-Data-Engineer-Associate learn materials can provide a good foundation for you to achieve your goal. A good job requires good skills, and the most intuitive way to measure your ability is how many qualifications you have passed and how many qualifications you have. With a qualification, you are qualified to do this professional job. Our Databricks-Certified-Data-Engineer-Associate Certification material is such a powerful platform, it can let you successfully obtain the Databricks-Certified-Data-Engineer-Associate certificate, from now on your life is like sailing, smooth sailing.

The GAQM Databricks-Certified-Data-Engineer-Associate (Databricks Certified Data Engineer Associate) Certification Exam is a professional certification program designed to assess the skills and knowledge of individuals working in the field of data engineering. Databricks Certified Data Engineer Associate Exam certification validates the ability of data engineers to design, build, and maintain data pipelines and data warehouses using Databricks technologies. Databricks-Certified-Data-Engineer-Associate Exam covers a wide range of topics, including data ingestion, data transformation, data modeling, data warehousing, and data quality.

Latest Updated Databricks Databricks-Certified-Data-Engineer-Associate Test Dates - Databricks-Certified-Data-Engineer-Associate Databricks Certified Data Engineer Associate Exam Latest Exam Labs

You can try Databricks-Certified-Data-Engineer-Associate free demo before you decide to buy the full version practice test. Databricks-Certified-Data-Engineer-Associate exam dumps details are researched and produced by our Professional Certification Experts who are constantly using industry experience to produce precise, and logical. ExamBoosts Databricks-Certified-Data-Engineer-Associate Exam Dumps will not only help you pass in one attempt, but also save your valuable time.

Databricks Certified Data Engineer Associate Exam Sample Questions (Q97-Q102):

NEW QUESTION # 97
A data engineer needs to create a table in Databricks using data from their organization's existing SQLite database.
They run the following command:

```
CREATE TABLE jdbc_customer360
USING _____
OPTIONS (
  url "jdbc:sqlite:/customers.db",
  dbtable "customer360"
)
```
databricks

Which of the following lines of code fills in the above blank to successfully complete the task?

- A. sqlite
- B. autoloader
- C. DELTA
- D. org.apache.spark.sql.sqlite
- E. org.apache.spark.sql.jdbc

Answer: A

Explanation:
In the given command, a data engineer is trying to create a table in Databricks using data from an SQLite database. The correct option to fill in the blank is "sqlite" because it specifies the type of database being connected to in a JDBC connection string. The USING clause should be followed by the format of the data, and since we are connecting to an SQLite database, "sqlite" would be appropriate here. References:
* Create a table using JDBC
* JDBC connection string
* SQLite JDBC driver

NEW QUESTION # 98
An organization is looking for an optimized storage layer that supports ACID transactions and schema enforcement. Which technology should the organization use?

- A. Data lake
- B. Delta Lake
- C. Cloud File Storage
- D. Unity Catalog

Answer: A

NEW QUESTION # 99
A data analyst has a series of queries in a SQL program. The data analyst wants this program to run every day.
They only want the final query in the program to run on Sundays. They ask for help from the data engineering team to complete this task.

Which of the following approaches could be used by the data engineering team to complete this task?

- A. They could automatically restrict access to the source table in the final query so that it is only accessible on Sundays.
- B. They could wrap the queries using PySpark and use Python's control flow system to determine when to run the final query.
- C. They could submit a feature request with Databricks to add this functionality.
- D. They could redesign the data model to separate the data used in the final query into a new table.
- E. They could only run the entire program on Sundays.

Answer: B

Explanation:
This approach would allow the data engineering team to use the existing SQL program and add some logic to control the execution of the final query based on the day of the week. They could use the datetime module in Python to get the current date and check if it is a Sunday. If so, they could run the final query, otherwise they could skip it. This way, they could schedule the program to run every day without changing the data model or the source table. References: PySpark SQL Module, Python datetime Module, Databricks Jobs

NEW QUESTION # 100
Which of the following benefits is provided by the array functions from Spark SQL?

- A. An ability to work with data in a variety of types at once
- B. An ability to work with data within certain partitions and windows
- C. An ability to work with time-related data in specified intervals
- D. An ability to work with complex, nested data ingested from JSON files
- E. An ability to work with an array of tables for procedural automation

Answer: D

Explanation:
Explanation
Array functions in Spark SQL are primarily used for working with arrays and complex, nested data structures, such as those often encountered when ingesting JSON files. These functions allow you to manipulate and query nested arrays and structures within your data, making it easier to extract and work with specific elements or values within complex data formats. While some of the other options (such as option A for working with different data types) are features of Spark SQL or SQL in general, array functions specifically excel at handling complex, nested data structures like those found in JSON files.

NEW QUESTION # 101
A data engineer has a single-task Job that runs each morning before they begin working. After identifying an upstream data issue, they need to set up another task to run a new notebook prior to the original task.
Which of the following approaches can the data engineer use to set up the new task?

- A. They can create a new job from scratch and add both tasks to run concurrently.
- B. They can clone the existing task in the existing Job and update it to run the new notebook.
- C. They can clone the existing task to a new Job and then edit it to run the new notebook.
- D. They can create a new task in the existing Job and then add it as a dependency of the original task.
- E. They can create a new task in the existing Job and then add the original task as a dependency of the new task.

Answer: C
