Topic - Invoice and Revenue Rates: How They Are Determined

Oracle Fusion Project Billing uses bill rates, burdening, and transfer price schedules to derive standard bill rates, multipliers, markups, and bases for calculating potential revenue when the revenue method classification on a revenue plan is as billed, as incurred, or rate based. Similarly, bill rates derive invoice amounts when the invoice method classification on a bill plan is rate based.

QUESTION: 3

What is the precedence order in which cost rates are determined for a planning resource when deriving raw costs for rate-based planning resources?

- Option A : Resource class rate schedule > Override rate > Job rate schedule > Person rate schedule
- Option B : Override rate > Job rate schedule > Resource class rate schedule > Person rate schedule
- Option C : Person rate schedule > Job rate schedule > Resource class rate schedule > Override rate
- Option D : Override rate > Person rate schedule > Job rate schedule > Resource class rate schedule
- Option E : Job rate schedule > Resource class rate schedule > Override rate > Person rate schedule

Correct Answer: D

QUESTION: 4

You have four resources in your organization: P, Q, R, and S. Resource P - Project or resource calendar is active. Resource Q - Project resource request dates are within the project or resource calendar effective dates. Resource R - Resource calendar is complex, it does not contain seven days, and it contains more than one pattern and shift. Resource S - Number of working days within the requested date range is not zero on the project or resource calendar. Identify the resource for whom Resource Availability Capacity Score will not be calculated. (Choose the best answer.)

- Option A : P
- Option B : Q
- Option C : R
- Option D : S

問題 #104

Your client is involved in automation control systems installation. Over the years, they have analyzed their total project spend on specific resource classes. They have identified that their cost spread distribution factor on a 10 spread point scale resembles: 0-4-10-11-14-13-10-4-0-0. Identify two ways to handle this kind of a spread on their budgets and forecasts. (Choose two)

- A. Use the predefined S-Curve spread with small deviations on the spread points.
- **B. Create a new spread curve or edit an existing spread curve to exactly match the spread points and attach to the resource class.**
- **C. Create a new spread curve or edit an existing spread curve to exactly match the spread points and attach to a project template.**
- D. Use the predefined Bell Curve spread with small deviations on the spread points.

答案: B,C

解題說明:

To handle a custom spread on budgets and forecasts, you can either create a new spread curve or edit an existing one to match the desired spread points. Then, you can attach the spread curve to a project template or a resource class, depending on whether you want to apply it to all projects using that template or all transactions using that resource class. 問題 #105

You have been asked to set up one active person, who is not a team member in the project, as a quality manager for each quality task created under projects. However, when you try to assign the quality manager as Task Manager, you cannot find the person's name in the list of values. What is the reason for this problem?
(Choose the best answer.)

- A. The "Require Task Managers to be Project Team Members" profile option is set to No.
- B. The quality manager is not assigned with a supervisor.
- C. The quality manager belongs to a department that is not associated with the project.
- **D. The "Require Task Managers to be Project Team Members" profile option is set to Yes.**

答案: D

Setup Task Name - Require Task Managers to be Project Team Members

問題 #106

Identify the attribute of a project type that determines if expenditure items are billable, and the amount type to be used as the basis for transfer pricing. (Choose the best answer.)

- A. work type
- B. event type
- C. expenditure type
- D. cost type

答案： A

解題說明：

Reference https://docs.oracle.com/cloud/latest/projectcs_gs/OAPFM/OAPFM1125361.htm#OAPFM1125277 (what's a work type?) In billing, you can use work types to classify work for the following purposes:

- * To determine the default billable status of expenditure items.
- * To classify cross-charge amounts into cost and revenue for cross-charge transactions.

Tip: To use work types to determine whether an expenditure item is billable you must set the profile option Work Type Derived for Expenditure Item to Yes.

When you create or import expenditure items, the default work type is inherited from the associated task.

Tasks, in turn, inherit work type values from parent tasks and ultimately from the project. Project types determine the default work type value for projects and project templates.

問題 #107

Your customer accounts revenue based on, product class category. Because all your customer's projects are funded by private and government institutions, they decide to classify all projects based on their funding source to accurately report on revenue in General Ledger. Accordingly, you create a new class category

"Funding Source" and assign it to all projects. However, you notice that the accounting is still happening based on product class category. Identify the reason for this problem. (Choose the best answer.)

- A. Funding source class category is assigned to all project types.
- B. Product class category is not enabled for "available as accounting source".
- C. Funding source class category is enabled for "available as accounting source".
- D. Funding source class category is not enabled for "available as accounting source".

答案： D

解題說明：

Only one class category at a time is available as an accounting source in Oracle Fusion Subledger Accounting.

To change the class category that Oracle Fusion Subledger Accounting uses, deactivate the old class category and create a new one with a different date range.

問題 #108

Your customer wants to assign the Net 45 payment term to all sets except for the corporate business unit specific set, which is assigned the Net 15 payment term. At transaction entry, the list of values for payment terms consists of only one set of data: the set that is assigned to the transaction's business unit.

Which reference data sharing method would you set up to meet the customer requirement? (Choose the best answer.)

- A. assignment to one set only; no common values allowed
- B. assignment to multiple sets; common values allowed
- C. assignment to multiple sets; no common values allowed
- D. assignment to one set only with common values

答案： C

Reference Data Sharing Methods

Variations exist in the methods used to share data in reference data sets across different types of objects. The following list identifies the methods:

Assignment to one set only, no common values allowed. This method is the simplest form of sharing reference data that allows assigning a reference data object instance to one and only one set. For example, Asset Prorate Conventions are defined and assigned to only one reference data set. This set can be shared across multiple asset books, but all the values are contained only in this one set.

Assignment to one set only, with common values. This method is the most commonly used method of sharing reference data that allows defining reference data object instance across all sets. For example, Receivables Transaction Types are assigned to a common set that is available to all the business units. You need not explicitly assign the transaction types to each business unit. In addition, you can assign a business unit-specific set of transaction types. At transaction entry, the list of values for transaction types includes the following:

Transaction types from the set assigned to the business unit.

Transaction types assigned to the common set that is shared across all business units.

Assignment to multiple sets, no common values allowed. The method of sharing reference data that allows a reference data object instance to be assigned to multiple sets. For instance, Payables Payment Terms use this method. It means that each payment term can be assigned to one or more than one set. For example, you assign the payment term Net 30 to several sets but assign Net 15 to a set specific only to your business unit.

At transaction entry, the list of values for payment terms consists of only the set that is assigned to the transaction's business unit.

Note: Oracle Fusion Applications contains a reference data set called Enterprise. Define any reference data that affects your entire enterprise in this set. Also update the data set going forward as you create new reference data items.
