Salesforce Certified Platform App Builder Sample Questions (Q155-Q160):

NEW QUESTION # 155
You can have multiple records with the same external ID.

- A. True
- B. False

Answer: A

Explanation:
Explanation: It is not recommended, as it will defeat the purpose of the external id.

NEW QUESTION # 156

Universal Containers has created two custom objects called Seminars and Attendees. Organization-wide defaults for these objects have been set to Private. Universal Containers wants to set up a new Junction object between these custom objects. A select group of users should be able to edit records in the Junction object.
Which two steps should an app builder take to configure the proper security?

- A. Sat lookup filters on both Junction object relationship field.
- B. Create owner-based sharing rules that give Read access to the master objects.
- C. Set Sharing Settings to Road Only on both Master-Detail relationship fields.
- D. Create an owner-based sharing rule that gives Road action to the junction object.

Answer: C,D

Explanation:
A: Setting Sharing Settings to Read Only on both Master-Detail relationship fields ensures that users can view but not edit the master records from the junction object.
D: Creating an owner-based sharing rule that gives Read access to the junction object allows specific users or groups to access and edit records in the Junction object while maintaining the private OWD setting.

NEW QUESTION # 157

Identify the standard Lightning components. (Choose 3 answers)

- A. List View
- B. Reports
- C. Visualforce Page
- D. Rich Text
- E. Dashboards

Answer: A,C,D

NEW QUESTION # 158

Universal Containers has a Lightning record page that supports both the mobile app and desktop. An app builder has downloaded a custom Lightning component from AppExchange, but users are unable to view the component on mobile devices.
What can be the issue?

- A. The component has been developed for Desktop Pages.
- B. The component needs to be activated.
- C. The record page needs to be activated.
- D. The record page template is unable to support mobile devices.

Answer: B

NEW QUESTION # 159

Universal Containers (UC) has created a picklist field called Status on three separate custom objects. UC has a requirement to share the list of values for this field across each object.
Which feature would an app builder use?

- A. Dynamic Action
- B. Global Picklist Value Set
- C. Dependent Picklist
- D. Field Update

Answer: B

Explanation:
Explanation
The app builder should use a global picklist value set to share the list of values for the Status field across each object. A global picklist value set is a set of values that can be used by multiple picklist fields on different objects. This can ensure data consistency and reduce maintenance efforts. Option A, C, and D are not features that can share picklist values across objects.

NEW QUESTION # 160
