Unlike the traditional way of learning, the great benefit of our ChromeOS-Administrator learning material is that when the user finishes the exercise, he can get feedback in the fastest time. So, users can flexibly adjust their learning plans according to their learning schedule. We hope that our new design of Professional ChromeOS Administrator test questions will make the user's learning more interesting and colorful.

Google Professional ChromeOS Administrator Exam Sample Questions (Q86-Q91):

NEW QUESTION # 86

You want to restrict who can sign in to a managed device during working hours. Which two settings do you need to use? Choose 2 answers

- A. Device off hours
- B. Single sign-on IdP redirection
- C. Family Link accounts
- D. User Data (Ephemera))

Answer: A,C

Explanation:

* Device off hours: This setting allows you to specify times when the device cannot be used, effectively restricting access to certain

hours.

* Family Link accounts: Family Link is a parental control app that allows you to manage a child's account and device usage. By requiring Family Link accounts, you can enforce sign-in restrictions for younger users.

Other options are incorrect because:

* A: Single sign-on (SSO) redirection simplifies sign-in for authorized users, but doesn't inherently restrict access.

* C: User Data (Ephemeral) controls whether user data is saved locally, but doesn't restrict sign-in.

NEW QUESTION # 87

Your organization's security protocols require you to ensure that any unattended devices log the user out after 24 hours. You have 1000 ChromeOS devices to manage. How would you implement this with the least amount of admin effort?

- A. Force-install a custom app to each device in question that notifies the user that they need to sign out of their device after 24 hours
- B. Create a corporate policy stating (he users are to manually sign out after the end of every shift
- C. You can remotely access each device and sign out of the user account using Chrome Remote Desktop
- D. Enable the 'User and Browser Settings' and update 'Maximum user session length' to any time up to 24 hours

Answer: D

Explanation:

This is the most efficient method as it applies the setting to all devices within the organizational unit (OU) through a single policy change in the Admin console.

The other options are less efficient:

* Corporate policy: Relies on user compliance and is difficult to enforce.

* Chrome Remote Desktop: Requires manual intervention for each device.

* Custom app: Adds complexity and potential security risks.

NEW QUESTION # 88

You want to enterprise-enroll a device that has previously been signed in to. What should you do first?

- A. Delete all consumer accounts, and then follow the same steps for enrolling a brand new device
- B. Wipe the device
- C. Contact Google support to convert the device into an enterprise device
- D. Follow the same steps for enrolling a brand new device

Answer: B

Explanation:

If a ChromeOS device has previously been signed in to, you must wipe the device (Powerwash) before enrolling it into the enterprise. This ensures that any existing user data and previous configurations are removed, allowing the device to start the enrollment process as new.

Verified Answer from Official Source:

The correct answer is verified from the Google ChromeOS Device Enrollment Guide, which specifies that devices must be wiped to remove any previous user associations before enterprise enrollment.

"To enroll a previously used device, perform a factory reset (Powerwash) to ensure it is in a clean state, ready for enterprise enrollment." Wiping the device ensures that it is free from personal settings or residual user data, which might conflict with enterprise policies.

Objectives:

* Enroll ChromeOS devices in an enterprise environment.

* Maintain compliance with managed device policies.

NEW QUESTION # 89

You are setting up ChromeOS devices in a public library and need to prevent your ChromeOS devices from sleeping when not in use. How would you set up your policy to achieve this?

- A. In "Power management settings" set the policy to "Only allow users to turn off the device using the physical power button "
- B. In "Managed Guest Session settings" set the maximum user session length to "unlimited "

- C. In "User & Browser Settings" for Power and shutdown set the policy to "Do not allow wake locks "
- **D. In "Power management settings" apply 'Do not allow device to sleep/shut down when idle on the sign-in screen "**

Answer: D

Explanation:

This setting is specifically designed to prevent Chrome OS devices from sleeping or shutting down when they are not actively being used, but are on the sign-in screen. This is ideal for public environments like libraries where the devices are meant to be accessible at all times.

Other options are incorrect because:

* B: This setting controls wake locks, which are used to keep a device awake under certain conditions. It doesn't directly control sleep behavior on the sign-in screen.

* C: This setting controls how users can turn off the device, but doesn't prevent the device from sleeping on its own.

* D: This setting controls the maximum length of a guest session, but doesn't affect the device's sleep behavior on the sign-in screen.

NEW QUESTION # 90

Your network administrator wants to block Google services traffic. What is the result?

- A. Chrome devices will not be able to reach Google
- B. Chrome devices will crash
- C. Nothing This isn't an issue
- **D. Google Search will not work**

Answer: D

Explanation:

Blocking Google services traffic will prevent Chrome devices from accessing any Google-owned domains, including google.com.

This will directly impact Google Search, as it relies on communication with Google servers to provide results.

Other Google services like Gmail, YouTube, Google Drive, etc., will also be inaccessible. However, the Chrome device itself will not crash, as it can still function with other websites and applications.

NEW QUESTION # 91

.....

Actual Professional ChromeOS Administrator Exam (ChromeOS-Administrator) dumps are designed to help applicants crack the Google ChromeOS-Administrator test in a short time. There are dozens of websites that offer ChromeOS-Administrator exam questions. But all of them are not trustworthy. Some of these platforms may provide you with Professional ChromeOS Administrator Exam (ChromeOS-Administrator) invalid dumps. Upon using outdated Google ChromeOS-Administrator dumps you fail in the Professional ChromeOS Administrator Exam (ChromeOS-Administrator) test and lose your resources.

Sample ChromeOS-Administrator Questions: <https://www.vcedumps.com/ChromeOS-Administrator-examcollection.html>
