NEW QUESTION 43

A developer created a weather app that contains multiple Lightning web components. One of the components, called Toggle, has a toggle for Fahrenheit or Celsius units. Another component, called Temperature, displays the current temperature in the unit selected in the Toggle component. When a user toggles from Fahrenheit to Celsius or vice versa in the Toggle component, the information must be sent to the Temperature component so the temperature can be converted and displayed.

What is the recommend way to accomplish this?

- A. The Toggle component should call a method in the Temperature component.
- B. Use Lightning Message Service to communicate between the components.
- C. Create a custom event to handle the communicate between the components.
- D. Use Lightning Message Service to communicate between the component.

Answer: C

NEW QUESTION 44

A developer created a Visualforce page and custom controller to display the account type field as shown below. Custom controller code: `public class customCtrlr { private Account theAccount; public String actType; public customCtrlr() { theAccount = {SELECT Id, Type FROM Account WHERE Id = :apexPages.currentPage().getParameters().get('id')}; actType = theAccount.Type; } }` Visualforce page snippet:

The Account Type is {!actType} The value of the account type field is not being displayed correctly on the page. Assuming the custom controller is properly referenced on the Visualforce page, what should the developer do to correct the problem?

- A. Add with sharing to the custom controller.
- B. Change theAccount attribute to public.
- C. Convert theAccount.Type to a String.
- D. Add a getter method for the actType attribute.

P.S. Free 2025 Salesforce PDI dumps are available on Google Drive shared by TroytecDumps: <https://drive.google.com/open?id=16J4bdiXOPMRoxScIP1b9AnB31P-d8de>

By using TroytecDumps PDI exam questions, you will be able to understand the real exam PDI scenario. It will help you get verified PDI answers and you will be able to judge your PDI preparation level for the PDI exam. More importantly, it will help you understand the real PDI exam feel. You will be able to check the real exam scenario by using this specific PDI Exam PDF questions. Our Salesforce experts are continuously working on including new PDI questions material and we provide a guarantee that you will be able to pass the PDI exam on the first attempt.

Salesforce PDI exam is a timed, multiple-choice test with 60 questions. Candidates are allowed 110 minutes to complete the exam. PDI exam is designed to evaluate the candidate's knowledge of the Salesforce platform and their ability to apply that knowledge to real-world scenarios. PDI Exam covers a broad range of topics, including Apex, Visualforce, data modeling, and integration with other systems.

clients. Our PDI preparation materials contain three versions: the PDF, the Software and the APP online. They give you different experience on trying out according to your interests and hobbies. And our PDI Study Guide can assure your success by precise and important information.

Salesforce Platform Developer I (PDI) Sample Questions (Q15-Q20):

NEW QUESTION # 15

What will be the output in the debug log in the event of a QueryException during a call to the @query method in the following Example?

```
class myClass {
    class CustomException extends QueryException {}
    public static Account aQuery() {
        Account theAccount;
        try {
            system.debug('Querying Accounts. ');
            theAccount = [SELECT Id FROM Account WHERE CreatedDate > TODAY];
        }
        catch (CustomException ex) {
            system.debug('Custom Exception. ');
        }
        catch (QueryException ex) {
            system.debug('Query Exception. ');
        }
        finally {
            system.debug('Done. ');
        }
        return theAccount;
    }
}
```

- A. Querying Accounts. Custom Exception Done.
- **B. Querying Accounts. Query Exception. Done**
- C. Querying Accounts. Query Exception.
- D. Querying Accounts. Custom Exception.

Answer: B

NEW QUESTION # 16

Which code in a Visualforce page and/or controller might present a security vulnerability?

- A. <apex:outputField value="{!ctrl userInput}" />
- B. <apex:outputText value="{!\$CurrentPage.parameters.userInput}" />
- **C. <apex:outputText escape="false" value="{!\$CurrentPage.parameters.userInput}" />**
- D. <apex:outputField escape="false" value="{!ctrl userInput}" />

Answer: C

NEW QUESTION # 17

A developer needs to create a baseline set of data (Accounts, Contacts, Products, Assets) for an entire suite of Apex tests allowing them to test isolated requirements for various types of Salesforce cases.

Which approach can efficiently generate the required data for each unit test?

- **A. Use @TestSetup with a void method.**
- B. Create a mock using the HttpcalloutMock interface.

- C. Create test data before Test .startTest() in the unit test.
- D. Add @IsTest (seeAllData=true) at the start of the unit test class.

Answer: A

Explanation:

- * Why@TestSetup?
- * The@TestSetupannotation creates a baseline set of test data once per test class.
- * Test methods reuse this data, avoiding the need to recreate it repeatedly, which improves efficiency.
- * Why Not Other Options?
- * A: HttpCalloutMock is used for mocking callouts, not for creating test data.
- * C: UsingseeAllData=trueis discouraged because it relies on org data, violating test isolation principles.
- * D: While creating data inTest.startTest()works, it is less efficient than@TestSetupfor shared data.
