Detail Drupal-Site-Builder Explanation, Drupal-Site-Builder Hot Questions

As the saying goes, time is the most precious wealth of all wealth. If you abandon the time, the time also abandons you. So it is also vital that we should try our best to save our time, including spend less time on preparing for exam. Our Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 guide torrent will be the best choice for you to save your time. Because our products are designed by a lot of experts and professors in different area, our Drupal-Site-Builder exam questions can promise twenty to thirty hours for preparing for the exam. If you decide to buy our Drupal-Site-Builder Test Guide, which means you just need to spend twenty to thirty hours before you take your exam. By our Drupal-Site-Builder exam questions, you will spend less time on preparing for exam, which means you will have more spare time to do other thing. So do not hesitate and buy our Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 guide torrent.

Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 Sample Questions (Q45-Q50):

NEW QUESTION # 45

Your Main navigation menu has two levels of menu items like sections, and child pages within each section.

Your UX team wants to make it easier for a site visitor viewing a child page to see what other pages are in that section. They have asked you to add a submenu to the Sidebar region on child pages.

How can you add a submenu to the child pages that shows all child pages in the section?

- A. Add the Main navigation menu to the Sidebar region, and use CSS to hide the top level menu items.
- **B. In Block layout, place the Main navigation block in the Sidebar region. Set the initial visibility level to 2.**
- C. Create a new menu for each main section containing links for each child page, and add each menu's block to the Sidebar region.
- D. In Block layout, place the Main navigation block in the Sidebar region. Set the initial visibility level to 1.

Answer: B

Explanation:

In Drupal 10 and Drupal 11, menus can be displayed as blocks and configured to show specific levels of the menu hierarchy. The "Main navigation" block includes settings such as "Starting level" (or initial visibility level) and "Maximum number of levels to display."

These settings allow site builders to control which part of the menu tree is visible in a given region.

To display only the child pages (submenu items) when a user is on a child page, you need to configure the block to start displaying from level 2, which corresponds to the submenu under the current top-level section.

This ensures that only relevant sibling pages within the same section are shown in the sidebar, improving usability and navigation.

Option B (level 1) would still show top-level menu items, not just the submenu. Option A is not recommended because using CSS to hide elements does not follow Drupal's configuration best practices.

Option D is unnecessary and inefficient, as Drupal's menu system already supports hierarchical display without creating duplicate menus.

Thus, configuring the menu block with an initial visibility level of 2 is the correct and recommended approach.

NEW QUESTION # 46

Your customer support department has asked to build a form on your Drupal website. The form should have the following fields:

Subject (text plain), Name (text plain), Email (Email), Message (text long), Attachment (file).

A developer built the form without any validations or restrictions. The form is accessible to Anonymous users of the site.

What is the potential security threat with this form?

- A. Putting a very long text into the message field, may timeout the form submit.
- **B. Anonymous users can upload corrupted or virus-infected files to your server.**
- C. Anonymous users should not have access to forms.
- D. There are no security issues with this form.

Answer: B

Explanation:

The main security risk in this scenario is the unrestricted file upload field exposed to anonymous users.

Drupal's file API documentation explains that file uploads must use validation and a defined list of allowed extensions. Core specifically notes that uploading arbitrary files is dangerous and that validation is necessary.

The Drupal file API also states that using a managed file field with defined allowed extensions helps sanitize filenames, validate files, and block insecure extensions by default. Without those restrictions, anonymous visitors could upload unsafe files, including malicious

or infected files, to the server.

Option A is too broad, because anonymous users can legitimately access public forms on Drupal sites. The issue is not public access by itself, but public access combined with missing validation and upload restrictions

. Option C describes a possible performance problem, not the most important security threat identified by Drupal's documentation.

Option D is clearly incorrect because Drupal's security guidance stresses protecting public forms and validating uploads carefully, especially on forms exposed to anonymous users.

NEW QUESTION # 47

What is meant by headless Drupal?

(Select 2 options)

- A. Applying security updates automatically to Drupal installation
- **B. Exposing Drupal content to other systems such as native applications.**
- **C. Just another phrase for "decoupled Drupal"**
- D. Publishing content automatically in Drupal

Answer: B,C

Explanation:

In Drupal's official documentation, headless Drupal is described as decoupled Drupal . The documentation explains that decoupled, or headless, Drupal separates the backend content management part of Drupal from the frontend presentation layer . In this architecture, Drupal is used as a content repository and content API, while the frontend can be built with other technologies such as JavaScript frameworks or consumed by other clients. This directly supports option C Drupal documentation also explains that this architecture allows Drupal content to be exposed to other systems and applications through APIs such as JSON:API or REST. That means Drupal can provide content to websites, mobile apps, kiosks, or other digital channels, which matches option B . The purpose of headless Drupal is therefore not automatic updates or automatic publishing, so options A and D are not correct. So, according to Drupal 10 and Drupal 11 documentation, the correct understanding is that headless Drupal means decoupled Drupal and involves exposing Drupal-managed content to external systems or applications through APIs .

NEW QUESTION # 48

You have installed a custom theme for your website, and you notice that the theme displays a Drupal icon as the favicon in the browser. As much as you love Drupal, you would like to remove this favicon and display your company's favicon instead.

How would you do this in the Drupal admin interface?

- A. Place the Site branding block in the appropriate region and enable the favicon under "Toggle branding elements".
- **B. Go to Appearance > Settings and upload your new favicon.**
- C. Go to Configuration > Basic Site Settings and upload your new favicon.
- D. Use a contributed module to inject CSS to hide the Drupicon and display your logo instead.

Answer: B

Explanation:

In Drupal 10 and Drupal 11, favicon settings are managed at the theme level , not through general site configuration. The official Drupal theming documentation explains that each theme has its own configurable settings, including the ability to upload or replace the site's favicon.

To change the favicon, you navigate to Appearance # Settings (or specifically the active theme's settings page), where you will find an option to upload a custom favicon or use the default. This allows you to replace the default Drupal icon (Drupicon) with your organization's icon.

Option A is incorrect because the Site branding block controls elements like the logo and site name, not the favicon. Option C is incorrect because Basic Site Settings does not manage favicon configuration in modern Drupal versions. Option D is unnecessary and incorrect, as CSS is not used to change favicons.

Therefore, the correct and documented method is to update the favicon through the theme settings in the Appearance section , making option B correct.

NEW QUESTION # 49

You have enabled website feedback contact form to allow users to submit feedback. You would like to redirect users to a different page after submission.

How will you accomplish this?

- A. Use an add-on module like Webform, since Core doesn't offer this feature.
- B. Set "Redirect URL" on Site information page under configuration.
- C. Allow users to add their own Redirect URL in user profile pages.
- **D. Add the desired destination page to the "Redirect path" field in contact form settings.**

Answer: D

Explanation:

Drupal core's Contact module allows administrators to configure multiple contact forms, each with its own settings. One of the configurable options is the ability to define a redirect path after form submission. This is done within the specific contact form's configuration, where you can specify the destination page users should be taken to after submitting the form.

Option D is correct because Drupal provides a "Redirect path" setting directly in the contact form configuration, making it possible to send users to a custom page such as a thank-you or confirmation page after submission.

Option A is incorrect because Drupal core already supports this functionality without needing a contributed module like Webform.

Option B is incorrect because Site information settings do not control form submission redirects. Option C is not relevant, as redirect behavior is not controlled through user profiles.

Thus, the correct Drupal-native solution is to configure the redirect path within the contact form settings, making D the correct answer.

NEW QUESTION # 50

.....

The customers can immediately start using the Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 (Drupal-Site-Builder) exam dumps of PassTorrent after buying it. In this way, one can save time and instantly embark on the journey of Drupal-Site-Builder test preparation. 24/7 customer service is also available at PassTorrent.
