Salesforce Mule-Dev-301 Questions Answers | Mule-Dev-301 Valid Exam Papers

Our web-based practice exam software is an online version of the Salesforce Mule-Dev-301 practice test. It is also quite useful for instances when you have internet access and spare time for study. To study and pass the Salesforce Mule-Dev-301 certification exam on the first attempt, our web-based Salesforce Mule-Dev-301 Practice Test software is your best option. You will go through

Salesforce Mule-Dev-301 mock exams and will see for yourself the difference in your preparation.

Salesforce Certified MuleSoft Developer II Sample Questions (Q35-Q40):

NEW QUESTION # 35

Refer to the exhibit.

A Mule Object Store is configured with an entry TTL of one second and an expiration interval of 30 seconds.

What is the result of the flow if processing between `os:store` and `os:retrieve` takes 10 seconds?

□

- A. `OS:KEY_NOT_FOUND`
- B. `originalPayload`
- C. `testPayload`
- D. `nullPayload`

Answer: D

Explanation:

The result of the flow is `nullPayload` if processing between `os:store` and `os:retrieve` takes 10 seconds. This is because the entry TTL of the object store is one second, which means that any stored value expires after one second and is removed from the object store. The expiration interval of 30 seconds only determines how often the object store checks for expired values, but it does not affect the TTL. Therefore, when `os:retrieve` tries to get the value after 10 seconds, it returns `nullPayload` because the value has already expired and been removed. Reference: <https://docs.mulesoft.com/object-store/osv2-faq#how-does-the-time-to-live-work>

NEW QUESTION # 36

A mule application exposes an API for creating payments. An Operations team wants to ensure that the Payment API is up and running at all times in production.

Which approach should be used to test that the payment API is working in production?

- A. Create a health check endpoint that listens on a separate port and uses a separate HTTP Listener configuration from the API
- B. Create a health check endpoint that reuses the same port number and HTTP Listener configuration as the API itself
- C. Configure the application to send health data to an external system
- D. Monitor the Payment API directly sending real customer payment data

Answer: A

NEW QUESTION # 37

A developer has created the first version of an API designed for business partners to work commodity prices.

What should the developer do to allow more than one major version of the same API to be exposed by the implementation?

- A. In Design Center, open the RAML and modify `baseUri` to include a variable that indicates the version number
- B. In Anypoint Studio, generate scaffolding from the RAML, and then modify the flow names generated by APIKit to include a variable with the major version number
- C. In Design Center, open the RAML and modify each operation to include the major version number
- D. In Anypoint Studio, generate scaffolding from the RAML, and then modify the `<http:listener>` in the generated flows to include a parameter to replace the version number

Answer: A

Explanation:

To allow more than one major version of the same API to be exposed by the implementation, the developer should modify the `baseUri` property in the RAML file to include a variable that indicates the version number. The `baseUri` property defines the base URL of the API and can include variables that are replaced with actual values when mocking or deploying the API. By using a variable for the version number, the developer can expose different versions of the API using different base URLs and avoid conflicts or confusion. Reference: <https://docs.mulesoft.com/api-designer/design-modify-raml-specs#baseuri>
<https://docs.mulesoft.com/api-manager/2.x/api-versioning>

NEW QUESTION # 38

A Flight Management System publishes gate change notification events whenever a flight's arrival gate changes. Other systems, including Baggage Handler System, Inflight Catering System and Passenger Notifications System, must each asynchronously receive the same gate change notification to process the event according.

Which configuration is required in Anypoint MQ to achieve this publish/subscribe model?

- A. Publish the gate change notification to an Anypoint MC queue
Have each client subscribe directly to the queue
- **B. Publish the gate change notification to an Anypoint MQ exchange.**
Create different Anypoint MQ queues meant for each of the other subscribing systems. Bind the exchange with each of the queues.
- C. Publish each client subscribe directly to the exchange.
Have each client subscribe directly to the queue.
- D. Publish the gate change notification to an Anypoint MQ queue.
Create different anypoint MQ exchange meant for each of the other subscribing systems Bind the queue with each of the exchanges

Answer: B

Explanation:

To achieve a publish/subscribe model using Anypoint MQ, where each system receives the same gate change notification event, the developer should publish the gate change notification to an Anypoint MQ exchange, create different Anypoint MQ queues meant for each of the other subscribing systems, and bind the exchange with each of the queues. An exchange is a message routing agent that can send messages to different queues based on predefined criteria. By binding an exchange with multiple queues, each queue receives a copy of every message sent to that exchange. Therefore, each system can subscribe to its own queue and receive every gate change notification event. Reference: <https://docs.mulesoft.com/anypoint-mq/3.x/anypoint-mq-exchanges>

NEW QUESTION # 39

Refer to the exhibit.

□ A Mule application pom.xml configures the Maven Resources plugin to exclude parsing binary files in the project's src/main/resources/certs directory.

Which configuration of this plugin achieves a successful build?

- A. □
- B. □
- C. □
- **D. □**

Answer: D

Explanation:

To configure the Maven Resources plugin to exclude parsing binary files in the project's src/main/resources/certs directory, option C should be used. This option specifies that any files with .cer or .jks extensions under the certs directory should be excluded from filtering. Filtering is a process of replacing placeholders with actual values in resource files during the build process. Binary files should not be filtered because they may become corrupted or unusable. Reference: <https://maven.apache.org/plugins/maven-resources-plugin/examples/filter.html> <https://maven.apache.org/plugins/maven-resources-plugin/examples/include-exclude.html>

NEW QUESTION # 40

.....

The 2Pass4sure guarantees their customers that if they have prepared with Salesforce Certified MuleSoft Developer II (Mule-Dev-301) practice test, they can pass the Salesforce Certified MuleSoft Developer II (Mule-Dev-301) certification easily. If the applicants fail to do it, they can claim their payment back according to the terms and conditions. Many candidates have prepared from the actual Salesforce Mule-Dev-301 Practice Questions and rated them as the best to study for the examination and pass it in a single try with the best score. The Salesforce Mule-Dev-301 practice material of 2Pass4sure came into existence after consultation with many professionals and getting their positive reviews.
