

# Updated GH-900 Demo & Exam GH-900 Dumps

P.S. Free & New GH-900 dumps are available on Google Drive shared by DumpsTorrent: <https://drive.google.com/open?id=1Qc5hfl9k4Pnpz-8SQFb8AMST78K9Fq4w>

If you feel nervous about your exam, then our GH-900 exam materials will be your best choice. GH-900 Soft test engine can stimulate the real exam environment, so that your confidence for your exam will be strengthened. In addition, we provided you with free demo to have a try before buying GH-900 Exam Cram. You can enjoy free update for one year, so that you can obtain the latest version timely, and the latest version for GH-900 training materials will be sent to your email automatically. You just need to check your email.

If they fail to do it despite all their efforts, so "DumpsTorrent" they can get a full refund of their money according to terms and conditions. The practice material of "DumpsTorrent" is packed with many premium features, and it is getting updated daily according to the real GitHub Foundations (GH-900) exam syllabus. The product of "DumpsTorrent" came into existence after consulting with GitHub Foundations (GH-900) many professionals and getting their positive reviews.

## Exam GH-900 Dumps - GH-900 Test Simulator

We have the GH-900 Questions and answers with high accuracy and timely update. Our professional team checks GH-900 answers and questions carefully with their professional knowledge. We also have the latest information about the exam center, and will update the version according to the new requirements. Pass guarantee and money back guarantee are also our principles, and if you have any questions, you can also consult the service staff.

## Microsoft GH-900 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Privacy, Security, and Administration: This domain measures skills of Security Administrators and Organization Managers in securing and administering GitHub environments. It covers ensuring repository security through branch protection rules, using security tools like Dependabot, managing access and permissions at repository and organization levels, creating and managing organizations, setting up organization-level security, and overseeing teams and members.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Modern Development: This domain assesses abilities of DevOps Engineers and Continuous Integration Specialists in implementing modern development practices. It emphasizes understanding DevOps principles and leveraging GitHub Actions for automation and CI</li><li>• CD pipeline implementation. Candidates also learn GitHub's tools and best practices for conducting and managing code reviews.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>• <b>Project Management:</b> This section is designed for Project Coordinators and Product Managers and focuses on using GitHub Projects for project management. Candidates learn to create and manage GitHub Projects, utilize project boards for organizing tasks, and integrate project workflows with issues and pull requests to maintain project visibility and progress.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Working with GitHub Repositories:</b> This domain targets Repository Administrators and Content Managers, focusing on managing repository settings and permissions. Candidates learn to configure repositories, use templates, and effectively manage files by adding, editing, and deleting. The domain also addresses versioning of files and the use of GitHub Desktop for streamlined file management tasks within repositories.</li> </ul>

## Microsoft GitHub Foundations Sample Questions (Q51-Q56):

### NEW QUESTION # 51

What are primary benefits of using GitHub issues templates?  
(Each answer presents a complete solution. Choose two.)

- A. To provide an easy-to-fill-out form for creating new issues
- B. To automatically create new branches when issues are created
- C. To automatically label or assign newly created issues
- D. To easily coerce existing issues into a standard format

**Answer: A,C**

Explanation:

The primary benefits of using GitHub issues templates include:

A . To automatically label or assign newly created issues: Issue templates can be configured to automatically apply labels or assign users when the issue is created, helping to streamline triage and management processes.

B . To provide an easy-to-fill-out form for creating new issues: Templates provide a standardized format for submitting issues, ensuring that all necessary information is captured and reducing the need for follow-up questions.

Coercing existing issues into a standard format or automatically creating new branches when issues are created are not functions provided by GitHub issues templates.

### NEW QUESTION # 52

Which of the following options can a user do from a discussion post?

- A. Create an issue from the discussion
- B. Add the discussion to README
- C. Archive the discussion
- D. Duplicate the discussion

**Answer: A**

Explanation:

From a discussion post on GitHub, a user can Create an issue from the discussion. This feature allows users to turn a discussion into an actionable item by creating an issue directly from the discussion thread. This is particularly useful when a conversation identifies a bug, task, or enhancement that needs to be tracked in the repository.

### NEW QUESTION # 53

While maintaining the gist history, which of the following is the most efficient way to create a public gist based on another user's gist?

- A. Create a new gist and copy the content from the existing gist.
- B. Clone the gist.
- C. Fork the gist.
- D. Request to be added to the existing gist.

**Answer: C**

Explanation:

Forking a gist is the most efficient way to create a public gist based on another user's gist while maintaining the history of the original gist. When you fork a gist, you create a new gist in your own account that retains a link to the original, allowing you to track changes and contribute back if desired.

Forking a Gist:

Option A is correct because forking is a straightforward way to create your own copy of another user's gist while preserving the history and making it easy to track updates.

Incorrect Options:

Option B is incorrect because creating a new gist and copying the content would not preserve the history or link back to the original gist.

Option C is incorrect because cloning is typically associated with repositories, not gists, and is more complex than forking for this purpose.

Option D is incorrect because requesting to be added to the existing gist is not a standard GitHub feature.

GitHub Docs: Forking Gists

### NEW QUESTION # 54

In GitHub, why is it recommended to deploy from your feature branch before merging into the main branch?

- A. To avoid the need for testing changes in production
- B. To speed up the process of merging changes into the main branch
- C. To ensure the changes are verified and validated in a production environment
- D. To directly deploy changes from the main branch without any intermediate testing

**Answer: C**

Explanation:

It is recommended to deploy from your feature branch before merging into the main branch to ensure the changes are verified and validated in a production environment. This practice helps in identifying any potential issues or bugs in a real-world scenario before the changes are permanently integrated into the main branch. By deploying from the feature branch, developers can catch and address issues early, reducing the risk of introducing bugs into the main branch, which is usually considered the stable branch.

### NEW QUESTION # 55

What is the primary purpose of creating a new branch in the GitHub flow?

- A. To create a backup of the main branch
- B. To experiment with new features or fixes
- C. To incorporate changes from a review
- D. To capture information about an issue

**Answer: B**

Explanation:

In GitHub Flow, creating a new branch is a key step in the development process that allows for isolated development of new features or fixes without affecting the main codebase.

Experimenting with New Features or Fixes:

Option C is correct. The primary purpose of creating a new branch in the GitHub flow is to provide a safe space to experiment with new features or fixes. This allows developers to work on changes independently and only merge them into the main branch after they have been reviewed and approved.

Incorrect Options:

Option A (To create a backup of the main branch) is incorrect because branches are not typically used for backups; they are for active development.

Option B (To capture information about an issue) is incorrect because issues are tracked separately; branches are for code changes.

Option D (To incorporate changes from a review) is incorrect because incorporating changes is done during the pull request process, not when creating a branch.
