Scrum SAFe-Practitioner (SAFe 5 Practitioner (SP)) Certification Exam is recognized and respected by employers worldwide. It is a valuable credential for professionals who want to advance their careers in Agile software development and take on leadership roles in their organizations. SAFe Practitioner Exam (6.0) certification demonstrates that the candidate has a deep understanding of Agile methodologies and is able to apply them effectively in a SAFe environment.

Scrum SAFe Practitioner Exam (6.0) Sample Questions (Q45-Q50):

NEW QUESTION # 45

Iteration planning, Iteration review, and backlog refinement are examples of which type of event

- A. Team event
- B. PI event
- C. Program event
- D. Sync event

Answer: A

Explanation:

Iteration planning, Iteration review, and backlog refinement are examples of team events, which are events that occur within the Agile team to plan, execute, and improve their work. Team events are aligned with the Iteration cadence, which is typically two weeks.

Team events include:

- * Iteration planning: A meeting where the team reviews the team backlog, estimates the stories, and commits to the Iteration goals
 - * Daily stand-up: A 15-minute meeting where the team members synchronize their work, share their progress, and identify any impediments or dependencies
 - * Backlog refinement: An ongoing activity where the team and the Product Owner collaborate to refine the team backlog, split features into stories, write acceptance criteria, and prioritize the work
 - * Iteration review: A meeting where the team demonstrates the completed stories to the Product Owner and other stakeholders, and collects feedback and validation
 - * Iteration retrospective: A meeting where the team reflects on their performance, identifies what went well and what can be improved, and agrees on action items to implement in the next Iteration
- Team events are different from PI events, which are events that occur at the program level and involve all the teams and stakeholders of an Agile Release Train (ART). PI events include:
- * PI planning: A two-day event where the ART aligns on a common vision, mission, and goals for the upcoming Program Increment (PI), and creates a plan for delivering value
 - * System demo: A meeting where the ART demonstrates the integrated solution to the Business Owners and other stakeholders, and collects feedback and validation
 - * Inspect and Adapt (I&A): A one-day event where the ART reviews the PI results, identifies the strengths and weaknesses, and creates an improvement backlog for the next PI
- Team events are also different from sync events, which are events that occur at the large solution level and involve multiple ARTs and Solution Trains that are working on a complex solution. Sync events include:
- * Solution demo: A meeting where the Solution Train demonstrates the integrated solution to the Customers and other stakeholders, and collects feedback and validation
 - * Pre- and Post-PI planning: Meetings where the Solution Train aligns on a common vision, mission, and goals for the upcoming PI, and coordinates the dependencies and risks across the ARTs
 - * Solution I&A: A meeting where the Solution Train reviews the PI results, identifies the strengths and weaknesses, and creates an improvement backlog for the next PI
- Team events are also different from program events, which are events that occur at the portfolio level and involve the Portfolio Management and other strategic roles. Program events include:
- * Portfolio sync: A meeting where the Portfolio Management reviews the portfolio vision, strategy, and roadmap, and aligns the value streams and ARTs on the portfolio priorities and objectives
 - * Lean budget guardrails: A set of policies and guidelines that govern the allocation and spending of the portfolio budget across the value streams and ARTs
 - * Portfolio Kanban: A system that visualizes and manages the portfolio work items, such as epics and capabilities, and ensures that they are aligned with the portfolio strategy and value delivery
- References: Exam Study Guide: SP (6.0) - SAFe Practitioner, Team Events, PI Events, Sync Events, [Program Events]

NEW QUESTION # 46

What represents the workflow, activities, and automation needed to deliver new functionality more frequently?

- A. Portfolio Kanban
- **B. The Continuous Delivery Pipeline**
- C. The PI Planning process
- D. The Lean budget Guardrails

Answer: B

Explanation:

The Continuous Delivery Pipeline represents the workflow, activities, and automation needed to deliver new functionality more frequently. It consists of four elements: Continuous Exploration, Continuous Integration, Continuous Deployment, and Release on Demand. The pipeline enables faster value delivery, higher quality, and lower risk. References: Exam Study Guide: SP (6.0) - SAFe Practitioner, Continuous Delivery Pipeline, Lesson 4: Deliver Value

NEW QUESTION # 47

Which two statements describe the responsibilities of the Product Owner? (Choose two.)

- A. To ensure the team follows Agile principles and practices
- B. To protect the team from external forces

- C. To own and manage the Team Backlog
- D. To coach the team
- E. To be a single voice for the Customer and stakeholders

Answer: C,E

Explanation:

The Product Owner is a member of the Agile team who represents the voice of the customer and stakeholders, and is responsible for defining and prioritizing the team backlog. The Product Owner works closely with the Product Management, who provides the vision and roadmap for the solution, and the Business Owners, who are the key stakeholders and value approvers. The Product Owner also collaborates with the Scrum Master, who facilitates the team's process and helps remove impediments, and the team members, who implement the backlog items and deliver value. The Product Owner's main responsibilities are:

- * To be a single voice for the customer and stakeholders, and ensure that the team understands their needs and expectations
 - * To own and manage the team backlog, and decompose features into stories that are valuable, estimable, testable, and small
 - * To prioritize the team backlog based on the business value, dependencies, risks, and feedback
 - * To participate in the PI planning event, and define and communicate the team's PI objectives and iteration goals
 - * To accept the stories that meet the definition of done and provide feedback to the team
 - * To attend the team and system demos, and showcase the team's accomplishments to the stakeholders
 - * To continuously engage with the customer and stakeholders, and incorporate their feedback into the backlog

NEW QUESTION # 48

Which of the following SAFe Core Values involves coaching aspiring developers to grow their skillsets and fill new roles throughout the organization?

- A. Respect for People
- B. Transparency
- C. Built-In Quality
- D. Alignment

Answer: A

Explanation:

Respect for People is one of the four SAFe Core Values that guide the behaviors and actions of everyone participating in a SAFe portfolio. Respect for People means that everyone is valued and deserves respect, regardless of their role, background, or experience. It also means that everyone is empowered to contribute, learn, and grow within the organization. Respect for People involves coaching aspiring developers to grow their skillsets and fill new roles throughout the organization, as well as providing them with opportunities for feedback, recognition, and career development. Respect for People also fosters a culture of trust, collaboration, and psychological safety, where people can express their ideas, opinions, and concerns without fear of judgment or retaliation. References: Core Values - Scaled Agile Framework, Respect for People - Scaled Agile Framework

NEW QUESTION # 49

Which statement is true about work in process (WIP) limits?

- A. Lower WIP limits result in fewer Stories being completed
- B. Higher WIP limits provide richer feedback
- C. Lower WIP limits improve flow
- D. Higher WIP limits result in lower utilization

Answer: C

Explanation:

Lowering the work in process (WIP) limits improves the flow of value through the system by reducing the amount of work that is started but not finished, minimizing the waste of context switching and multitasking, and increasing the focus and collaboration of the teams. Lower WIP limits also help identify and eliminate bottlenecks, balance demand and capacity, and accelerate feedback and learning. According to the SAFe Principle #6, visualizing and limiting WIP is one of the key practices to achieve continuous flow and deliver value in the shortest sustainable lead time. References: Principle #6 - Visualize and Limit WIP, Reduce Batch Sizes, and Manage Queue Lengths - Scaled Agile Framework, Understanding SAFe Work In Progress Limits - Strongback Consulting

NEW QUESTION # 50

.....

To do this you just need to pass the SAFe Practitioner Exam (6.0) (SAFe-Practitioner) exam which is quite challenging and not easy to pass.
