The bundle has an Salesforce JavaScript-Developer-I exam questions and answers, desktop practice software, and web-based software. All the preparation products have been designed carefully with advice from hundreds of professional Salesforce certified experts. This Salesforce JavaScript-Developer-I exam questions preparation material has everything to achieve success in the Salesforce Certified JavaScript Developer (JS-Dev-101) exam on the first attempt. The unique features of TrainingDump JavaScript-Developer-I Preparation products have been noted. The JavaScript-Developer-I pdf exam questions by TrainingDump have the most realistic Salesforce JavaScript-Developer-I exam questions. This JavaScript-Developer-I pdf covers all the JavaScript-Developer-I Exam Questions from the previous exam as well as the upcoming Salesforce Certified JavaScript Developer (JS-Dev-101) exam. You don't need to consult different books for the Salesforce certification exam with the TrainingDump.

Salesforce JavaScript-Developer-I Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Server Side JavaScript: This section focuses on Node.js and server-side JavaScript. Salesforce JavaScript programmers will be tested on their ability to identify appropriate Node.js implementations and commands for given scenarios. Additionally, you will need to recognize which Node.js core modules, libraries, and package management solutions fit specific requirements, reflecting your understanding of server-side development with JavaScript.
Topic 2	<ul style="list-style-type: none"> Variables, Types, and Collections: The topic will test how effectively JavaScript programmers can handle variable creation, initialization, type coercion, and data manipulation. You will need to demonstrate knowledge of strings, numbers, dates, arrays, and JSON handling. The Javascript Developer I exam will require a deep understanding of these concepts and their proper application in real-world scenarios.

Topic 3	<ul style="list-style-type: none"> • Testing: In the topic, you will be required to evaluate unit tests and improve them. The exam will assess your ability to identify ineffective tests and modify them to make them more robust and accurate. This topic ensures that you can write and maintain effective tests, a crucial skill for ensuring code quality and reliability in professional environments.
Topic 4	<ul style="list-style-type: none"> • Browser and Events: The topic will challenge your ability to work with events, event handlers, and the DOM. You will need to demonstrate how to manage event propagation and utilize browser-specific APIs. Additionally, proficiency in using browser developer tools to investigate code behavior will be tested, making it crucial for you to understand browser interactions thoroughly.
Topic 5	<ul style="list-style-type: none"> • Asynchronous Programming: Asynchronous programming is a key concept in JavaScript, and this section tests your understanding of event loops, asynchronous code execution, and handling promises. Salesforce JavaScript programmer will need to demonstrate their ability to implement asynchronous solutions for business requirements.

Salesforce JavaScript-Developer-I Training Courses | JavaScript-Developer-I Exam Overview

JavaScript-Developer-I exam dumps save your study and preparation time. Our experts have added hundreds of Salesforce Certified JavaScript Developer (JS-Dev-101) (JavaScript-Developer-I) questions similar to the real exam. You can prepare for the Salesforce Certified JavaScript Developer (JS-Dev-101) (JavaScript-Developer-I) exam dumps during your job. You don't need to visit the market or any store because TrainingDump Salesforce Certified JavaScript Developer (JS-Dev-101) (JavaScript-Developer-I) exam questions are easily accessible from the website.

Salesforce Certified JavaScript Developer (JS-Dev-101) Sample Questions (Q42-Q47):

NEW QUESTION # 42

A developer is setting up a new Node.js server with a client library that is built using events and callbacks.

The library:

* Will establish a web socket connection and handle receipt of messages to the server

* Will be imported with require, and made available with a variable called we.

The developer also wants to add error logging if a connection fails.

Given this info, which code segment shows the correct way to set up a client with two events that listen at execution time?

- A. `ws.on('connect', () => { console.log('connected to client'); ws.on('error', (error) => { console.log('ERROR' , error); }); });`
- B. `ws.on('connect', () => { console.log('connected to client'); }); ws.on('error', (error) => { console.log('ERROR' , error); });`
- C. `try{ ws.connect (() => { console.log('connected to client'); }); }`
- D. `ws.connect (() => { console.log('connected to client'); }).catch((error) => { console.log('ERROR' , error); });`

Answer: B

Explanation:

```
} catch(error) { console.log('ERROR' , error); };
```

NEW QUESTION # 43

Refer to the code below:

```
new Promise((resolve, reject) => {  
  const fraction = Math.random();  
  if( fraction > 0.5) reject("fraction > 0.5, " + fraction);  
  resolve(fraction);  
})  
.then(() => console.log("resolved"))  
.catch((error) => console.error(error))  
.finally(() => console.log(" when am I called?"));
```

```
new Promise((resolve, reject) => {  
  const fraction = Math.random();  
  if( fraction > 0.5) reject("fraction > 0.5, " + fraction);  
  reject(fraction);  
})  
.then(() => console.log("resolved"))  
.catch((error) => console.error(error))  
.finally(() => console.log(" when am I called?"));  
0.024493713600408196  
when am I called?  
Promise {<fulfilled>: undefined} VM1560:7
```

```
new Promise((resolve, reject) => {  
  const fraction = Math.random();  
  if( fraction > 0.5) reject("fraction > 0.5, " + fraction);  
  resolve(fraction);  
})  
.then(() => console.log("resolved"))  
.catch((error) => console.error(error))  
.finally(() => console.log(" when am I called?"));  
resolved VM1349:6  
when am I called? VM1349:8  
Promise {<fulfilled>: undefined}
```

When does Promise.finally on line 08 get called?

- A. When resolved and settled
- **B. When resolved or rejected**
- C. When rejected
- D. When resolved

Answer: B

NEW QUESTION # 44

Refer to the code below:

```
const searchText = ' Yay! Salesforce is amazing! ' ;
let result1 = searchText.search(/sales/i);
let result2 = searchText.search(/sales/);
console.log(result1);
console.log(result2);
```

After running this code, which result is displayed on the console?

- A. true
false
- **B. 5**
-1
- C. 5
0
- D. 5
undefined

Answer: B

Explanation:

String: " Yay! Salesforce is amazing! "

Index positions:

* ' Y ' at 0, ' a ' at 1, ' y ' at 2, ' ! ' at 3, space at 4, ' S ' at 5, ' a ' at 6, ' l ' at 7, ' e ' at 8, ' s ' at 9, etc.

Substring " Sales " starts at index 5.

String.prototype.search with a regex returns the index of the first match or -1 if there is no match.

* searchText.search(/sales/i);

* /sales/i is case-insensitive because of the i flag.

* It matches " Sales " beginning at index 5.

* So result1 is 5.

* searchText.search(/sales/);

* /sales/ is case-sensitive.

* It requires lowercase " sales " .

* The text has " Sales " with uppercase S, so this does not match.

* search returns -1 when there is no match.

* So result2 is -1.

Console output:

* First log: 5

* Second log: -1

Option D matches this.

Concepts: regex search, case sensitivity vs i flag, String.prototype.search return values.

NEW QUESTION # 45

A developer publishes a new version of a package with new feature that do not break backward compatibility. The previous version number was 1.1.3.

Following semantic versioning format, what should the new package version number be?

- A. 1.2.3
- **B. 1.2.0**
- C. 2.0.0
- D. 1.1.4

Answer: B

NEW QUESTION # 46

Refer to the code below:

```
const addBy = ?
```

```
const addByEight = addBy(8);
```

```
const sum = addBYEight(50);
```

Which two functions can replace line 01 and return 58 to sum?

Choose 2 answers

- A. `const addBy = function(num1){
return function(num2){
return num1 + num2;
}
}`
- B. `const addBy = (num1) => num1 + num2 ;`
- C. `const addBY = (num1) => (num2) => num1 + num2;`
- D. `const addBy = function(num1){
return num1 + num2;
}`

Answer: A,C

NEW QUESTION # 47

.....

Do you long to get the JavaScript-Developer-I certification to improve your life? Are you worried about how to choose the learning product that is suitable for you? If your answer is yes, we are willing to tell you that you are a lucky dog, because you meet us, it is very easy for us to help you solve your problem. The JavaScript-Developer-I latest question from our company can help people get their JavaScript-Developer-I certification in a short time.
