Cisco Certified Design Expert (CCDE v3.0) Written Exam Sample Questions (Q147-Q152):

NEW QUESTION # 147

A network security team observes phishing attacks on a user machine from a remote location. The organization has a policy of saving confidential data on two different systems using different types of authentication. What is the next step to control such events after the security team verifies all users in Zero Trust modeling?

- A. Assess real-time security health of devices.
- B. Apply a context-based network access control policy for users.
- C. Enforce risk-based and adaptive access policies.

- D. Ensure trustworthiness of devices.

Answer: A

NEW QUESTION # 148

A network architect must redesign a service provider edge, where multiservice and multitenant PEs are currently present. Which design feature should be minimized in the new design to achieve reliability?

- **A. fate sharing**
- B. unicast overlay routing
- C. bridging
- D. redundancy

Answer: A

Explanation:

"Fate sharing" refers to multiple services or customers relying on the same physical or logical component.

Minimizing fate sharing improves reliability by isolating failures:

- * Isolating customer services ensures that failure in one domain does not affect others.
- * Separating critical control and data planes enhances resiliency.

Why other options are incorrect:

- * A: Bridging may introduce other issues but is not directly tied to fate sharing.
- * C: Redundancy enhances, not reduces, reliability.
- * D: Unicast overlay routing is not a fault domain problem in this context.
