Cisco Securing Networks with Cisco Firepower Sample Questions (Q133-Q138):

NEW QUESTION # 133

Refer to the exhibit. An engineer is analyzing a Network Risk Report from Cisco FMC. Which application must the engineer take immediate action against to prevent unauthorized network use?

- A. Chrome
- B. YouTube
- C. TOR
- D. Kerberos

Answer: C

NEW QUESTION # 134

Which limitation applies to Cisco Firepower Management Center dashboards in a multidomain environment?

- A. Only the administrator of the top ancestor domain can view dashboards.
- **B. Child domains cannot view dashboards that originate from an ancestor domain.**
- C. Child domains can view but not edit dashboards that originate from an ancestor domain.
- D. Child domains have access to only a limited set of widgets from ancestor domains.

Answer: B

Explanation:

Reference: https://www.cisco.com/c/en/us/td/docs/security/firepower/60/configuration/guide/fpmc-config_guide-v60/Using_Dashboards.html

NEW QUESTION # 135

Refer to the exhibit. A security engineer views the health alerts in Cisco Secure Firewall Management Center by using the Health Monitor in the web interface. One of the alerts shows an appliance as critical because the Time Synchronization module status is out of sync. To troubleshoot the issue, the engineer runs the ntpq command in Secure Firewall Management Center. The output is shown in the exhibit. Which action must the security engineer take next to resolve the issue?

- A. Configure the appliance to sync with its own internal clock.
- **B. Configure the appliance to receive the time from an NTP server.**
- C. Reestablish the connection to the timeserver.
- D. Reset the appliance with a hard reboot.

Answer: B

NEW QUESTION # 136

An engineer must configure a Cisco FMC dashboard in a multidomain deployment. Which action must the engineer take to edit a report template from an ancestor domain?

- A. Add it as a separate widget.
- **B. Copy it to the current domain.**
- C. Change the document attributes.
- D. Assign themselves ownership of it.

Answer: B

NEW QUESTION # 137

An engineer is configuring URL filtering for a Cisco FTD device in Cisco FMC. Users must receive a warning when they access <http://www.Dac'additste.com> with the option of continuing to the website if they choose to.

No other websites should be blocked. Which two actions must the engineer take to meet these requirements?
(Choose two.)

- **A. On the HTTP Responses tab of the access control policy editor, set the Interactive Block Response Page to system-provided.**
- B. Configure an access control rule that matches the Adult URL category and set the action to interactive Block.
- C. On the HTTP Responses tab of the access control policy editor, set the Block Response Page to Custom.
- **D. Configure an access control rule that matches an URL object for <http://www.badaduitsite.com>, and set the action to interactive Block.**
- E. Configure the default action for the access control policy to Interactive Block.

Answer: A,D

Explanation:

To configure URL filtering for a Cisco FTD device in Cisco FMC, and to meet the requirements of the question, the engineer must

do the following:

* On the HTTP Responses tab of the access control policy editor, set the Interactive Block Response Page to system-provided. This will enable the system to display a warning page to the users when they try to access a blocked URL, and give them the option to continue or cancel. The system-provided page is a default page that contains a generic message and a logo.

* Configure

an access control rule that matches an URL object for <http://www.badadultsite.com>; and set the action to Interactive Block. This will apply the interactive block action to the specific URL that is defined in the URL object.

The interactive block action will trigger the interactive block response page that was configured in the previous step.

The other options are incorrect because:

* On the HTTP Responses tab of the access control policy editor, setting the Block Response Page to Custom will not affect the interactive block action. The block response page is used when the action is set to Block, not Interactive Block.

* Configuring the default action for the access control policy to Interactive Block will apply the interactive block action to all URLs that are not matched by any access control rule. This will not meet the requirement of blocking no other websites.

* Configuring an access control rule that matches the Adult URL category and sets the action to Interactive Block will apply the interactive block action to all URLs that belong to the Adult category.

This

will not meet the requirement of blocking only <http://www.badadultsite.com>

1.

NEW QUESTION # 138

.....

Desktop-based 300-710 practice exam software is the first format that NewPassLeader provides to its customers.
