Maybe you are under tremendous pressure now, but you need to know that people's best job is often done under adverse circumstances. Ideological pressure, even physical pain, can be a mental stimulant. Turn pressure into power, which may be your chance to complete the transformation. But our ISA-IEC-62443 Exam Questions can help you become more competitive easier than you can imagine. With a pass rate of 98% to 100%, our ISA-IEC-62443 study materials can help you achieve your dream easily. And we have money back guarantee on our ISA-IEC-62443 practice guide.

DumpsQuestion offers the best self-assessment software for the ISA-IEC-62443 exam. This desktop-based practice exam provides valid and up-to-date ISA-IEC-62443 practice test questions. You can customize the software by adjusting the time and number of ISA/IEC 62443 Cybersecurity Fundamentals Specialist (ISA-IEC-62443) questions to your preferences. Additionally, you can try a free demo of the ISA-IEC-62443 Practice Test. This software keeps track of all your ISA-IEC-62443 practice exam attempts, allowing you to monitor your progress and improve your ISA/IEC 62443 Cybersecurity Fundamentals Specialist (ISA-IEC-62443) exam preparation.

>> ISA-IEC-62443 Valid Test Blueprint <<

Top ISA-IEC-62443 Valid Test Blueprint | Useful Online ISA-IEC-62443 Bootcamps and Unparalleled Reliable ISA/IEC 62443 Cybersecurity Fundamentals Specialist Test Pass4sure

The web-based ISA-IEC-62443 practice test is accessible via any browser. This ISA-IEC-62443 mock exam simulates the actual ISA/IEC 62443 Cybersecurity Fundamentals Specialist (ISA-IEC-62443) exam and does not require any software or plugins. Compatible with iOS, Mac, Android, and Windows operating systems, it provides all the features of the desktop-based ISA-IEC-62443 Practice Exam software.

ISA/IEC 62443 Cybersecurity Fundamentals Specialist Sample Questions (Q202-Q207):

NEW QUESTION # 202

During the operation of an IACS, who is responsible for executing the Security Protection Scheme (SPS) process measures and responding to emerging risks?

- A. The asset owner
- B. The system integrator
- C. The external auditor
- D. The product vendor

Answer: A

Explanation:

ISA/IEC 62443 clearly assigns operational cybersecurity responsibility to the asset owner. During the Operate and Maintain phase of the IACS lifecycle, the asset owner is accountable for ensuring that cybersecurity controls are executed, monitored, and adapted as risks evolve.

Step 1: Definition of the SPS

IEC 62443-2-2 defines the Security Protection Scheme (SPS) as a documented set of technical, procedural, and physical measures selected to manage cybersecurity risk. While other parties may contribute to its design or implementation, execution during operation is the asset owner's responsibility.

Step 2: Operational accountability

ISA/IEC 62443-2-1 establishes that the asset owner must operate and maintain the IACS security program, including incident handling, vulnerability management, patching, monitoring, and response to emerging threats.

Step 3: Why other roles are incorrect

* Product vendors are responsible for product security, not operational risk response.

* System integrators support design and implementation, not ongoing ownership.

* External auditors assess compliance but do not execute controls.

Step 4: Risk ownership principle

Because the asset owner bears the consequences of downtime, safety incidents, and regulatory impact, the standard assigns them responsibility for executing SPS measures and responding to new risks.

Therefore, Option A is correct.

NEW QUESTION # 203

Which is a reason for
and physical security regulations meeting a mixed resistance?

Available Choices (select all choices that are correct)

- **A. There are a limited number of enforced cybersecurity and physical security regulations.**
- B. Regulations contain only informative elements.
- C. Cybersecurity risks can best be managed individually and in isolation.
- D. Regulations are voluntary documents.

Answer: A

Explanation:

Cybersecurity and physical security regulations are intended to provide guidance and requirements for protecting industrial control systems from various threats and risks. However, these regulations may face mixed resistance from different stakeholders for various reasons. One of the reasons is that there are a limited number of enforced cybersecurity and physical security regulations, especially at the international level. This means that some regions or countries may have more stringent or comprehensive regulations than others, creating inconsistencies and challenges for cross-border cooperation and compliance. Moreover, some regulations may be outdated or not aligned with the current best practices and standards, such as ISA/IEC

62443, which may limit their effectiveness and applicability. Therefore, some organizations may prefer to follow voluntary standards or frameworks, such as ISA/IEC 62443, rather than mandatory regulations, as they may offer more flexibility and adaptability to the specific needs and contexts of each industrial control system. ISA/IEC 62443 Standards to Secure Your Industrial Control System, page 3 Using the ISA/IEC 62443 Standard to Secure Your Control System, page 9

NEW QUESTION # 204

As related to IACS Maintenance Service Providers, when do maintenance activities generally start?

- A. During the design phase
- B. Before the handover of the solution
- **C. After the handover of the solution**
- D. At the beginning of the project

Answer: C

Explanation:

In the context of ISA/IEC 62443, maintenance activities by IACS Maintenance Service Providers generally begin after the solution

(such as a control system or automation project) is handed over to the asset owner.

This marks the transition from project (installation and commissioning) to operational maintenance, which includes patching, updating, and other support activities as part of the system lifecycle.

Reference: ISA/IEC 62443-2-4:2015, Section 4.3.3 ("Service provider maintenance activities after handover").

NEW QUESTION # 205

What is the name of the protocol that implements serial Modbus over Ethernet?

Available Choices (select all choices that are correct)

- A. MODBUS/CIP
- **B. MODBUS/TCP**
- C. MODBUS/Plus
- D. MODBUS/Ethernet

Answer: B

Explanation:

MODBUS/TCP is the name of the protocol that implements serial Modbus over Ethernet. MODBUS/TCP is a variant of the Modbus protocol that uses the Transmission Control Protocol (TCP) as the transport layer to encapsulate Modbus messages and send them over Ethernet networks. MODBUS/TCP preserves the Modbus application layer and data model, which means that serial Modbus devices can communicate with MODBUS

/TCP devices through a gateway or a converter. MODBUS/TCP is widely used in industrial automation and control systems, as it offers high performance, interoperability, and compatibility with existing Modbus devices. References: ISA/IEC 62443 Cybersecurity Fundamentals Specialist Study Guide, Section 3.1.21; MODBUS Application Protocol Specification V1.1b3, Section 1.1

NEW QUESTION # 206

Which of the following is an industry sector-specific standard?

Available Choices (select all choices that are correct)

- A. NIST SP800-82
- B. ISA-62443 (EC 62443)
- **C. API 1164**
- D. D. ISO 27001

Answer: C

Explanation:

API 1164 is an industry sector-specific standard that provides guidance on the cybersecurity of pipeline supervisory control and data acquisition (SCADA) systems. API stands for American Petroleum Institute, which is the largest U.S. trade association for the oil and natural gas industry. API 1164 was first published in

2004 and revised in 2009 and 2021. The latest version of the standard aligns with the ISA/IEC 62443 series of standards and incorporates the concepts of security levels, zones, and conduits. API 1164 covers the security lifecycle of pipeline SCADA systems, from risk assessment and policy development to implementation and maintenance. The standard also defines roles and responsibilities, security requirements, security controls, and security assessment methods for pipeline SCADA systems.
