Terraform-Associate-004 Original Questions, Terraform-Associate-004 Latest Questions

Provided you get the certificate this time with our Terraform-Associate-004 training guide, you may have striving and excellent friends and promising colleagues just like you. It is also as obvious magnifications of your major ability of profession, so Terraform-Associate-004 Learning Materials may bring underlying influences with positive effects. The promotion or acceptance of our Terraform-Associate-004 exam questions will be easy. So it is quite rewarding investment.

HashiCorp Certified: Terraform Associate (004) (HCTA0-004) Sample Questions (Q65-Q70):

NEW QUESTION # 65

Which of these are benefits of using Sentinel with HCP Terraform/Terraform Cloud? (Pick the 3 correct responses)

- A. You can enforce a list of approved AWS AMIs.
- B. You can check out and check in cloud access keys.
- C. Sentinel Policies can be written in HashiCorp Configuration Language (HCL).
- D. Policy-as-code can enforce security best practices.

Answer: A,B,D

Explanation:

Sentinel is a policy-as-code framework that integrates with Terraform Cloud to enforce security, compliance, and governance rules. You can enforce rules such as approved AMIs and ensure security best practices.

Policies are written in the Sentinel language, not HCL.

Sentinel Policies

NEW QUESTION # 66

Which of the following commands would you use to access all of the attributes and details of a resource managed by Terraform?

- A. terraform state list
- B. terraform state show 'provider_type.name'
- C. terraform state list 'provider_type.name'
- D. terraform get 'provider_type.name'

Answer: B

Explanation:

The terraform state show command allows you to access all of the attributes and details of a resource managed by Terraform. You can use the resource address (e.g. provider_type.name) as an argument to show the information about a specific resource. The terraform state list command only shows the list of resources in the state, not their attributes. The terraform get command downloads and installs modules needed for the configuration. It does not show any information about resources. References = [Command: state show] and [Command: state list]

NEW QUESTION # 67

When using a remote backend or terraform Cloud integration, where does Terraform save resource state?

- A. In an environment variable
- B. On the disk
- C. In memory
- D. In the remote backend or Terraform Cloud

Answer: D

Explanation:

This is where Terraform saves resource state when using a remote backend or Terraform Cloud integration, as it allows you to store and manage your state file in a remote location, such as a cloud storage service or Terraform Cloud's servers. This enables collaboration, security, and scalability for your Terraform infrastructure.

NEW QUESTION # 68

You're writing a Terraform configuration that needs to read input from a local file called id_rsa.pub. Which built-in Terraform function can you use to import the file's contents as a string?

- A. filebase64("id_rsa.pub")
- B. templatefile("id_rsa.pub")
- C. file("id_rsa.pub")
- D. fileset("<"id_rsa.pub")

Answer: C

Explanation:

To import the contents of a local file as a string in Terraform, you can use the built-in file function. By specifying file("id_rsa.pub"), Terraform reads the contents of the id_rsa.pub file and uses it as a string within your Terraform configuration. This function is particularly useful for scenarios where you need to include file data directly into your configuration, such as including an SSH public key for provisioning cloud instances. References = This information is a standard part of Terraform's functionality with built-in

functions, as outlined in Terraform's official documentation and commonly used in various Terraform configurations.

NEW QUESTION # 69

What functionality do providers offer in Terraform?(Pick 3 correct responses)

- A. Enforce security and compliance policies.
- **B. Interact with cloud provider APIs.**
- **C. Provision resources for public cloud infrastructure services.**
- **D. Provision resources for on-premises infrastructure services.**
- E. Group a collection of Terraform configuration files that map to a single state file.

Answer: B,C,D

Explanation:

A (Correct)- Providers allow Terraform to interact with APIs of cloud/on-premises services.

B (Correct)- Some Terraform providers can provision on-premises infrastructure, such as VMware, OpenStack, etc.

C (Incorrect)- This describes Terraform Workspaces, not providers.

D (Correct)- Terraform providers allow provisioning of public cloud resources (AWS, Azure, GCP, etc.).

E (Incorrect)- Enforcing security and compliance policies is not a direct provider function, but it can be done using Sentinel or other policy-as-code tools.
