Pass Guaranteed Quiz HashiCorp - Terraform-Associate-003 - HashiCorp Certified: Terraform Associate (003) (HCTA0-003) Latest Test Duration

HashiCorp Certified: Terraform Associate (003) (HCTA0-003) (Terraform-Associate-003) practice test software is another great way to reduce your stress level when preparing for the HashiCorp Exam Questions. With our software, you can practice your excellence and improve your competence on the HashiCorp Certified: Terraform Associate (003) (HCTA0-003) (Terraform-Associate-003) exam dumps. Each HashiCorp Terraform-Associate-003 practice exam, composed of numerous skills, can be measured by the same model used by real examiners.

HashiCorp Certified: Terraform Associate (003) (HCTA0-003) Sample Questions (Q183-Q188):

NEW QUESTION # 183

How could you reference an attribute from the vsphere_datacenter data source for use with the datacenter_id argument within the

vsphere_folder resource in the following configuration?

- A. Data.vsphere_datacenter,dc
- **B. Data.vsphere_datacenter.DC.id**
- C. Vsphere_datacenter.dc.id
- D. Data,dc,id

Answer: B

Explanation:

The correct way to reference an attribute from the vsphere_datacenter data source for use with the datacenter_id argument within the vsphere_folder resource in the following configuration is data.vsphere_datacenter.dc.id. This follows the syntax for accessing data source attributes, which is data.TYPE.NAME.ATTRIBUTE. In this case, the data source type is vsphere_datacenter, the data source name is dc, and the attribute we want to access is id. The other options are incorrect because they either use the wrong syntax, the wrong punctuation, or the wrong case.

References = [Data Source: vsphere_datacenter], [Data Source: vsphere_folder], [Expressions: Data Source References]

NEW QUESTION # 184

You are writing a child Terraform module that provisions an AWS instance. You want to reference the IP address returned by the child module in the root configuration. You name the instance resource 'main'.

Which of these is the correct way to define the output value?

- A)
- ☐ B)
- ☐ C)
- ☐ D)

- **A. Option D**
- B. Option B
- C. Option A
- D. Option C

Answer: A

NEW QUESTION # 185

terraform apply will fail if you have not run terraform plan first to update the plan output.

- A. True
- **B. False**

Answer: B

Explanation:

Comprehensive and Detailed in-Depth Explanation:

* terraform apply can run without explicitly running terraform plan first.

* Running terraform plan before apply is recommended but not mandatory.

* If no plan file is provided, terraform apply automatically creates and executes a plan before applying changes.

Official Terraform Documentation Reference: terraform apply - HashiCorp Documentation

NEW QUESTION # 186

You're writing a Terraform configuration that needs to read input from a local file called id_rsa.pub. Which built-in Terraform function can you use to import the file's contents as a string?

- A. templatefile("id_rsa.pub")
- **B. file("id_rsa.pub")**
- C. fileset("id_rsa.pub")
- D. filebase64("id_rsa.pub")

Answer: B

Explanation:

To import the contents of a local file as a string in Terraform, you can use the built-in file function. By specifying file("id_rsa.pub"), Terraform reads the contents of the id_rsa.pub file and uses it as a string within your Terraform configuration. This function is particularly useful for scenarios where you need to include file data directly into your configuration, such as including an SSH public key for provisioning cloud instances.

References = This information is a standard part of Terraform's functionality with built-in functions, as outlined in Terraform's official documentation and commonly used in various Terraform configurations.

NEW QUESTION # 187

What is the name of the default file where Terraform stores the state?

Type your answer in the field provided. The text field is not case-sensitive and all variations of the correct answer are accepted.

Answer:

Explanation:

Terraform.tfstate

Explanation:

The name of the default file where Terraform stores the state is terraform.tfstate. This file contains a JSON representation of the current state of the infrastructure managed by Terraform. Terraform uses this file to track the metadata and attributes of the resources, and to plan and apply changes. By default, Terraform stores the state file locally in the same directory as the configuration files, but it can also be configured to store the state remotely in a backend.

References = [Terraform State], [State File Format]

NEW QUESTION # 188
