CompTIA A+ Certification Exam: Core 1 Sample Questions (Q65-Q70):

NEW QUESTION # 65
A customer reports that the output from their thermal receipt printer has vertical white lines. Which of the following would most likely resolve this issue?

- A. Installing a maintenance kit
- B. Using the correct paper type
- C. Cleaning the heating element
- D. Replacing the ink cartridge

Answer: C

Explanation:
Comprehensive and Detailed In-Depth Explanation:
Thermal printers create images using a heated print head on specially coated thermal paper. Vertical white lines indicate that part of the heating element is dirty or blocked, preventing heat transfer to the paper. Cleaning the print head (heating element) will restore full functionality.
* Option A: Thermal printers do not use ink or toner, so this is not applicable.
* Option B: Wrong paper could cause blank output, but consistent vertical lines point to the print head.
* Option C: Maintenance kits are typically for laser printers, not thermal printers.
CompTIA A+ Core 1 Exam Objective Reference:
* Objective 3.7: Given a scenario, troubleshoot common printer problems.

NEW QUESTION # 66
A systems administrator deploys BitLocker to all devices. However, one of the desktop PCs is not able to encrypt the boot drive. Which of the following should the administrator check?

- A. RAM
- B. TPM
- C. CPU
- D. HDD

Answer: B

Explanation:
BitLocker Drive Encryption in Windows requires a Trusted Platform Module (TPM) to encrypt the boot drive securely. The TPM is a dedicated microcontroller designed to secure hardware through integrated cryptographic keys. It validates system integrity during boot and securely stores the encryption keys. If BitLocker cannot find a TPM or it is disabled in BIOS/UEFI, drive encryption cannot proceed.
BitLocker can function without TPM using a USB startup key, but this compromises some security and is not recommended for managed enterprise environments.

A user joins a conference call with a Bluetooth headset. Which of the following has the user created?

- A. WAN
- B. MAN
- C. SAN
- D. PAN

Answer: D

Explanation:

A PAN is a network established between devices in close proximity, such as between a smartphone and a Bluetooth headset.
Bluetooth technology is specifically designed for short-range communication, making it a type of PAN.
Incorrect Options:
A: MAN (Metropolitan Area Network): A MAN covers a city or metropolitan area and is not relevant to Bluetooth connections.
C: SAN (Storage Area Network): A SAN is used for large-scale data storage, unrelated to Bluetooth connections.
