SAP Certified Associate - Integration Developer Sample Questions (Q43-Q48):

NEW QUESTION # 43

You have created a product based on an API proxy, but you have not published the product yet. What is a consequence?

- A. The product is displayed in the API Business Hub Enterprise with the note "not published".
- **B. The product is not displayed in the API Business Hub Enterprise.**
- C. The product is displayed in the API Business Hub Enterprise but is grayed out.

Answer: B

Explanation:

In API Management (part of SAP Integration Suite), when you create an API Product (which bundles API Proxies for consumption):

Publishing is required before it becomes visible in API Business Hub Enterprise (Developer Portal).

If the product is not yet published, it remains in the design-time environment and is invisible to app developers.

Only published products are available for subscription and discovery.

Other options:

The product will not be shown grayed out or with a "not published" note; it simply won't be visible at all in the Business Hub Enterprise.

NEW QUESTION # 44

Where must you configure an HTTPS inbound adapter with OAuth 2.0 authentication?

- A. In the process runtime
- **B. In the integration flow**
- C. In the adapter
- D. In the SAP Integration Suite

Answer: B

Explanation:

An HTTPS inbound adapter is an adapter that allows an integration flow to receive messages from external systems using the HTTPS protocol. OAuth 2.0 authentication is a method of authentication that allows clients to access protected resources on behalf of a resource owner by obtaining an access token from an authorization server. To configure an HTTPS inbound adapter with OAuth 2.0 authentication, you must do it in the integration flow where you define the adapter settings. You can choose OAuth 2.0 as the authentication type and specify the required parameters, such as client ID, client secret, token URL, scope, and so on. You can also configure additional security options, such as SSL certificate, CSRF protection, and CORS policy. NEW QUESTION # 45

You want to set up Exchange Properties in an integration flow. Besides a Content Modifier, what can you use?

- **A. Groovy SDK scripting**
- B. Python scripting
- C. XML scripting
- D. Batch scripting

Answer: A

Explanation:

The Groovy SDK scripting can be used to set up Exchange Properties in an integration flow. The Groovy SDK scripting allows you to access and manipulate message headers, properties, and payloads using Groovy scripts. You can use the setProperty method to set an Exchange Property with a name and a value. Reference: Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 46

From which of the following can you create an API proxy directly? Note: There are 2 correct answers to this question.

- **A. API provider**
- **B. Source URL**
- C. S/4HANA API
- D. Open Connectors

Answer: A,B

Explanation:

In SAP API Management (part of Integration Suite), an API Proxy acts as a facade for a backend service. You can create an API proxy directly from:

API Provider # An API provider represents the backend system (e.g., SAP S/4HANA, SAP Gateway, third-party services). Proxies can be generated from these providers.

Source URL # You can directly specify the backend system's endpoint URL, and an API proxy will be generated from it.

Other options:

Open Connectors # Provides harmonized APIs to third-party apps (e.g., Salesforce, HubSpot), but you don't create proxies

directly from them.

S/4HANA API # While S/4HANA APIs can be exposed, they are typically accessed via an API Provider or URL, not directly listed as a creation source.

NEW QUESTION # 47

What does the "Open Integration" principle of the SAP Integration Suite mean?

- A. SAP Integration Suite allows SAP-to-SAP integrations.
- B. SAP Integration Suite by default supports integrations to other SAP soft-ware.
- C. SAP Integration Suite by default supports third-party software integration.

Answer: C

Explanation:

The "Open Integration" principle of the SAP Integration Suite means that SAP Integration Suite by default supports third-party software integration. The SAP Integration Suite is an open and modular iPaaS that allows you to integrate any system or application, regardless of whether it is from SAP or not. The SAP Integration Suite provides various connectors, adapters, APIs, and pre-built integrations that enable you to connect to third-party software with ease and flexibility.
