

ISTQB ISTQB-CTFL Exam Preparation - Exam ISTQB-CTFL Quizzes

The image shows a graphic titled "ISTQB CTFL-Agile Tester Exam Summary:" with a table of exam details. The table has two columns: a label column and a value column. The values include Vendor (ISTQB), Exam Code (CTFL-AT), Full Exam Name (ISTQB Certified Tester Foundation Level - Agile Tester), Number of Questions (40), Sample Questions (a link to sample questions and answers), Practice Exam (a link to a practice test), Passing Score (26/40), Time Limit (60 Minutes), and Exam Fee (USD \$200). At the bottom of the graphic, it says "Easy and Guaranteed Success with ProcessExam.com".

Vendor	ISTQB
Exam Code	CTFL-AT
Full Exam Name	ISTQB Certified Tester Foundation Level - Agile Tester
Number of Questions	40
Sample Questions	ISTQB CTFL-AT Exam Sample Questions and Answers
Practice Exam	ISTQB CTFL-AT Exam Practice Test
Passing Score	26/40
Time Limit	60 Minutes
Exam Fee	USD \$200

Easy and Guaranteed Success with ProcessExam.com

If you are still afraid of trying our ISTQB-CTFL exam quiz, you will never have a chance to grow. Opportunities are always for those who prepare themselves well. The only way to harvest wealth is challenging all the time. Our ISTQB-CTFL practice materials are waiting for you. Cheer up for yourself. There is nothing that you will lose for our demos of the ISTQB-CTFL study materials are totally free to download.

Our company has employed a lot of leading experts in the field to compile the ISTQB-CTFL exam question. Our system of team-based working is designed to bring out the best in our people in whose minds and hands the next generation of the best ISTQB-CTFL exam torrent will ultimately take shape. Our company has a proven track record in delivering outstanding after sale services and bringing innovation to the guide torrent. Your success is guaranteed for our experts can produce world class ISTQB-CTFL Guide Torrent for our customers. You will be bound to pass the ISTQB-CTFL exam.

Free PDF ISTQB-CTFL - Reliable ISTQB Certified Tester Foundation Level (CTFL v4.0) Exam Preparation

The more you can clear your doubts, the more easily you can pass the ISTQB Certified Tester Foundation Level (CTFL v4.0) (ISTQB-CTFL) exam. PDFVCE ISTQB-CTFL practice test works amazingly to help you understand the ISTQB-CTFL exam pattern and how you can attempt the real ISTQB Exam Questions. It is just like the final ISTQB-CTFL exam pattern and you can change its settings. When you take PDFVCE ISTQB ISTQB-CTFL Practice Exams, you can know whether you are ready for the finals or not. It shows you the real picture of your hard work and how easy it will be to clear the ISTQB-CTFL exam if you are ready for it.

ISTQB Certified Tester Foundation Level (CTFL v4.0) Sample Questions (Q198-Q203):

NEW QUESTION # 198

The tests at the bottom layer of the test pyramid:

- A. run faster than the tests at the top layer of the pyramid
- B. cover larger pieces of functionalities than the tests at the top layer of the pyramid
- C. are defined as 'UI Tests' or 'End-To-End tests' in the different models of the pyramid
- D. are unscripted tests produced by experience-based test techniques

Answer: A

NEW QUESTION # 199

Which ONE of the following roles is responsible for mediating, managing time, and generating a safe review environment in which everyone can speak freely?

- A. Review leader
- B. Reviewer
- C. Manager
- **D. Moderator**

Answer: D

Explanation:

Comprehensive and Detailed In-Depth Explanation:

The Moderator (D) plays a key role in formal reviews by facilitating discussions, ensuring that reviews stay on track, and creating an open environment for feedback. The Manager (A) is responsible for overseeing the testing process but does not directly facilitate reviews. The Reviewer (B) is responsible for examining the work product, while the Review Leader (C) organizes reviews but does not necessarily mediate them.

NEW QUESTION # 200

A program is used to control a manufacturing line (turn machines on and off, start and stop conveyer belts, add raw materials to the flow, etc.). Not all actions are possible at all times. For example, there are certain manufacturing stages that cannot be stopped - unless there is an emergency. A tester attempts to evaluate if all such cases (where a specific action is not allowed) are covered by the tests.

Which coverage metric will provide the needed information for this analysis?

- **A. Branch Coverage**
- B. Code coverage
- C. Data flow coverage
- D. Statement coverage

Answer: A

Explanation:

Branch coverage is a type of structural coverage metric that measures the percentage of branches or decision outcomes that are executed by the test cases. A branch is a point in the code where the control flow can take two or more alternative paths based on a condition. For example, an if-else statement is a branch that can execute either the if-block or the else-block depending on the evaluation of the condition. Branch coverage ensures that each branch is taken at least once by the test cases, and thus reveals the behavior of the software under different scenarios. Branch coverage is also known as decision coverage or all-edges coverage. Branch coverage is suitable for testing the cases where a specific action is not allowed, because it can verify that the test cases cover all the possible outcomes of the conditions that determine the action. For example, if the program has a condition that checks if the manufacturing stage can be stopped, then branch coverage can ensure that the test cases cover both the cases where the stage can be stopped and where it cannot be stopped.

This way, branch coverage can help identify any missing or incorrect branches that may lead to undesired or unsafe actions.

The other options are not correct because they are not suitable for testing the cases where a specific action is not allowed. Code coverage is a general term that encompasses various types of coverage metrics, such as statement coverage, branch coverage, data flow coverage, etc. Code coverage does not specify which type of coverage metric is used for the analysis. Data flow coverage is a type of structural coverage metric that measures the percentage of data flow paths that are executed by the test cases. A data flow path is a sequence of statements that define, use, or kill a variable. Data flow coverage is useful for testing the correctness and completeness of the data manipulation in the software, but not for testing the conditions that determine the actions. Statement coverage is a type of structural coverage metric that measures the percentage of statements or lines of code that are executed by the test cases. Statement coverage ensures that each statement is executed at least once by the test cases, but it does not reveal the behavior of the software under different scenarios.

Statement coverage is a weaker criterion than branch coverage, because it does not account for the branches or decision outcomes in the code. References = ISTQB Certified Tester Foundation Level (CTFL) v4.0 syllabus, Chapter 4: Test Techniques, Section 4.3: Structural Testing Techniques, Pages 51-54.

NEW QUESTION # 201

Which of the following is NOT a deciding factor in determining the extent of testing required?

- A. Level of risk of the product or features
- B. Budget to do testing
- C. A particular tester involved in testing
- D. Time available to do testing

Answer: C

Explanation:

The extent of testing required for a software product depends on various factors, such as the level of risk, the budget, and the time available. The level of risk reflects the potential impact of failures on the stakeholders and the environment. The budget determines how much resources can be allocated for testing. The time available defines the schedule and deadlines for testing activities. The particular tester involved in testing is not a deciding factor for the extent of testing required, as testing should be based on objective criteria and not on personal preferences or abilities. NEW QUESTION # 202

Which of the following software development models BEST exemplifies a model that does NOT support the principle of early testing?

- A. The iterative development model
- B. The V-model
- C. The Waterfall model
- D. The incremental development model

Answer: C

Explanation:

The Waterfall model exemplifies a software development model that does not support the principle of early testing. In the Waterfall model, each phase must be completed before the next begins, which delays testing until after the completion of the earlier phases like requirements gathering and design. This can often result in finding defects later in the development cycle, making them more expensive and time-consuming to fix (ISTQB not-for-profit association) (ISTQB not-for-profit association).References:
