Cisco Certified Design Expert (CCDE) Written Exam Sample Questions (Q153-Q158):

NEW QUESTION # 153

Company XYZ has 30 sites running a legacy private WAN architecture that connects to the Internet via multiple high-speed connections. The company is now redesigning their network and must comply with these design requirements:

- * Use a private WAN strategy that allows the sites to connect to each other directly and caters for future expansion.
- * Use the Internet as the underlay for the private WAN.
- * Securely transfer the corporate data over the private WAN.

Which two technologies should be incorporated into the design of this network? (Choose two.)

- A. IPsec
- B. S-VTI
- C. PPTP
- D. DMVPN
- E. GET VPN

Answer: A,D

NEW QUESTION # 154

An engineer is designing a DMVPN network where OSPF has been chosen as the routing protocol. A spoke-to-spoke data propagation model must be set up. Which two design considerations must be taken into account? (Choose two.)

- A. The network type on all sites should be point-to-multipoint.
- B. The hub should be set as the DR by specifying the priority to 255.
- C. Configure all the sites as network type broadcast.
- D. The network type should be point-to-multipoint for the hub and point-to-point for the spokes.
- E. The hub should be the DR by changing the priority of the spokes to 0.

Answer: C,E

NEW QUESTION # 155

For a company that offers online billing systems for their customers, which strategy ensures the RPO is kept as low as possible?

- A. periodic snapshot of data
- B. spare onsite disks
- C. cloud backup to mirror data
- D. backup on external storage

Answer: C

NEW QUESTION # 156

As part of workspace digitization, a large enterprise has migrated all their users to Desktop as a Service (DaaS), by hosting the backend system in their on-premises data center. Some of the branches have started to experience disconnections to the DaaS at periodic intervals, however, local users in the data center and head office do not experience this behavior. Which technology can be used to mitigate this issue?

- A. traffic shaping
- B. tail drop
- C. WRED
- D. traffic policing

Answer: A

Explanation:

* Traffic shaping buffers excess traffic and smooths traffic bursts, which is essential for DaaS traffic sensitive to periodic link congestion across WAN circuits.

* It helps ensure consistent, predictable performance under fluctuating WAN conditions.

Why other options are incorrect:

* A: Tail drop leads to congestion and packet loss.

* C: WRED is used for congestion avoidance, but not ideal for real-time DaaS traffic shaping.

* D: Policing drops excess traffic instead of buffering, worsening DaaS disconnections.

NEW QUESTION # 157

A key to maintaining a highly available network is building in the appropriate redundancy to protect against failure. This redundancy is carefully balanced with the inherent complexity of redundant systems. Which design consideration is relevant for enterprise WAN use cases when it comes to resiliency?

- A. The design approach should consider simple and centralized management aspect
- B. Design in a way that it simplifies and improves ease of deployment
- C. Design automation tools wherever it is appropriate for greater visibility
- **D. Design in a way that expects outages and attacks on the network and its protected resources**

Answer: D
