IT業種で仕事している皆さんが現在最も受験したい認定試験はISACAの認定試験のようですね。広く認証されている認証試験として、ISACAの試験はますます人気があるようになっていきます。その中で、AAISM認定試験が最も重要な一つです。この試験の認定資格はあなたが高い技能を身につけていることも証明できます。しかし、試験の大切さと同じ、この試験も非常に難しいです。試験に合格するのは少し大変ですが、心配しないでくださいよ。GoShikenはAAISM認定試験に合格することを助けてあげますから。

ISACA AAISM 認定試験の出題範囲：

トピック	出題範囲
トピック 1	● AI ガバナンスとプログラム管理: 試験のこのセクションでは、AI セキュリティ ガバナンス プロフェッショナルの能力を測定し、ガバナンス フレームワーク、ポリシー作成、データ ライフサイクル管理、プログラム開発、インシデント対応プロトコルを通じて AI セキュリティを実装する際に関係者にアドバイスすることに重点を置いています。
トピック 2	● AIテクノロジーとコントロール: このセクションでは、AIセキュリティアーキテクトの専門知識を測定し、安全なAIアーキテクチャとコントロールの設計に関する知識を評価します。プライバシー、倫理、信頼に関する懸念事項、データ管理コントロール、監視メカニズム、そしてAIシステムに合わせたセキュリティコントロールの実装について扱います。
トピック 3	● AI リスク管理: 試験のこのセクションでは、AI リスク管理者のスキルを測定し、リスク処理計画やベンダー監視など、AI 導入に関連する企業の脅威、脆弱性、サプライチェーン リスクの評価をカバーします。

AAISM認定デベロッパー & AAISM日本語対策問題集

AAISM認定試験の資格を取得するのは容易ではないことは、すべてのIT職員がよくわかっています。しかし、AAISM認定試験を受けて資格を得ることは自分の技能を高めてよりよく自分の価値を証明する良い方法ですから、選択しなければならなりません。ところで、受験生の皆さんを簡単にIT認定試験に合格させられる方法がないですか。もちろんありますよ。GoShikenの問題集を利用することは正にその最良の方法です。GoShikenはあなたが必要とするすべてのAAISM参考資料を持っていますから、きっとあなたのニーズを満たすことができ

ます。GoShikenのウェブサイトに行ってもっとたくさんの情報をブラウズして、あなたがほしい試験AAISM参考書を見つけてください。

ISACA Advanced in AI Security Management (AAISM) Exam 認定 AAISM 試験問題 (Q75-Q80):

質問 # 75

Which of the following is the MOST effective action an organization can take to address data security risk when using generative AI features in an application?

- A. Require opt-out provisions for data usage
- B. Establish IP ownership guidelines with third parties
- C. Establish policies and awareness training for acceptable AI use
- D. Rely on the AI provider's independent audit reports

正解: C

解説:

AAISM stresses that the largest and most immediate risk for generative AI is unintentional data leakage by employees, making acceptable-use policies and staff training the most effective short-term risk mitigation.

Users must be instructed not to input sensitive data, understand usage restrictions, and follow governance requirements.

Relying solely on third-party audits (D) is insufficient. IP agreements (A) and opt-out clauses (B) are contractual protections, not operational safeguards.

質問 # 76

When using AI as part of incident response, which of the following BEST ensures the automation aligns with regulatory and governance obligations?

- A. Implement a tiered automation strategy where severity ratings inform the need for human oversight
- B. Apply anomaly detection models to filter incoming threats and automate containment
- C. Train the AI incident response platform to mirror legacy response workflows and log containment
- D. Use deep learning models to autonomously classify all incidents

正解: A

解説:

AAISM prescribes risk-based, human-in-the-loop orchestration for safety-critical or regulated actions. A tiered automation strategy that gates autonomy by incident severity, data sensitivity, and regulatory requirements ensures accountability, auditability, and proportionality, satisfying governance obligations. Full autonomy (A) risks non-compliance; simply mirroring legacy workflows (B) may not meet current obligations; broad auto-containment (C) lacks necessary oversight controls.

質問 # 77

Which of the following recommendations would BEST help a service provider mitigate the risk of lawsuits arising from generative AI's access to and use of internet data?

- A. Activate filtering logic to exclude intellectual property flags
- B. Review log information that records how data was collected
- C. Disclose service provider policies to declare compliance with regulations
- D. Appoint a data steward specialized in AI to strengthen security governance

正解: A

解説:

The AAISM materials highlight that one of the primary legal risks with generative AI systems is the unauthorized use of copyrighted or intellectual property-protected data drawn from internet sources. To mitigate lawsuits, the most effective recommendation is to

implement filtering logic that actively excludes data flagged for intellectual property risks before ingestion or generation. While disclosing compliance policies, appointing governance roles, or reviewing logs are supportive measures, they do not directly prevent the core liability of using restricted content. The study guide explicitly emphasizes that proactive filtering and data governance controls are the most effective safeguards against legal disputes concerning content origin.

質問 # 78

Which of the following actions BEST enables the evaluation of bias during an AI impact assessment?

- A. Comparing the AI system's output against historical data benchmarks
- B. Analyzing the AI system's reaction time under peak workload conditions
- **C. Assessing the AI system's training data to ensure it represents all relevant end-user groups**
- D. Measuring the AI system's performance processing speed under predefined varying workloads

正解: C

解説:

The most direct and effective way to evaluate bias risk is to assess representativeness and coverage of the training data against all relevant user groups and contexts. Bias frequently originates from imbalanced, unrepresentative, or systematically skewed datasets. Ensuring demographic and contextual coverage, verifying labeling quality, and checking subgroup performance are foundational steps in bias evaluation and mitigation planning. Output benchmarking can surface symptoms but is insufficient without data representativeness analysis; latency and throughput measurements are performance concerns, not bias assessments.

質問 # 79

An AI system that supports critical processes has deviated from expected performance and is producing biased outcomes. Which of the following is the BEST course of action?

- A. Retrain the model with a new and expanded dataset
- **B. Perform a root cause analysis to identify mitigation steps**
- C. Conduct audits of the data and the model
- D. Activate the model kill switch

正解: B

解説:

AAISM directs that when harmful or biased behavior is observed in a production AI system, the organization should enter a formal incident/variance handling workflow that begins with root cause analysis (RCA) to identify the source of deviation (data drift, concept drift, feature leakage, pipeline changes, control failures) and determine proportionate risk treatments. Immediate retraining (Option A) without RCA risks reinforcing the same bias; audits (Option C) are key activities within RCA rather than the action that frames the response; a kill switch (Option D) is reserved for conditions where risk exceeds the defined tolerances and immediate harm prevention is required.
