

Use Real Microsoft AZ-700 PDF Questions [2026] - 100% Guaranteed Success

What's more, part of that ExamBoosts AZ-700 dumps now are free: https://drive.google.com/open?id=1ARtVQhU0RFGZJv9TqO1e_xlkdaUOvZ6_

Desktop Designing and Implementing Microsoft Azure Networking Solutions (AZ-700) practice exam software also keeps track of the earlier attempted Microsoft AZ-700 practice test so you can know mistakes and overcome them at each and every step. The Desktop Designing and Implementing Microsoft Azure Networking Solutions (AZ-700) practice exam software is created and updated in a timely by a team of experts in this field. If any problem arises, a support team is there to fix the issue.

To prepare for the Microsoft AZ-700 exam, you will need to have a strong understanding of Microsoft Azure Networking Solutions. You should have experience in designing and implementing networking solutions in Microsoft Azure, as well as a strong understanding of network security, monitoring, and optimization. You should also be familiar with virtual network peering, ExpressRoute, and Azure VPN Gateway.

Microsoft AZ-700 exam covers a wide range of topics related to Azure networking solutions, such as designing and implementing Azure virtual networks, Azure load balancers, Azure VPN gateways, Azure ExpressRoute, and Azure Firewall. Candidates will also be tested on their ability to configure and manage Azure network security groups, Azure DNS, and Azure Traffic Manager. AZ-700 Exam also covers advanced topics such as hybrid networking, network automation, and network monitoring and troubleshooting.

Microsoft AZ-700 certification exam is designed to test the skills and knowledge of IT professionals in designing and implementing networking solutions on the Microsoft Azure platform. Designing and Implementing Microsoft Azure Networking Solutions certification is ideal for those looking to validate their expertise in networking concepts and cloud computing on the Azure platform. AZ-700 exam is intended for IT professionals with experience in Azure networking and administration.

Microsoft AZ-700 Exam Actual Tests - Exam AZ-700 Duration

If you want to success in your career as a Microsoft Certified Professional, you must think outside the box. It would be beneficial if you considered adding Designing and Implementing Microsoft Azure Networking Solutions to your resume. To get this certification, you must pass the AZ-700 exam conducted by Microsoft. Passing the Designing and Implementing Microsoft Azure Networking Solutions exam will help you advance your career. It is not an easy task to pass the Designing and Implementing Microsoft Azure Networking Solutions certification exam on the first attempt, but now ExamBoosts is here to help. To assist you with remote study, ExamBoosts provides Microsoft AZ-700 Exam Questions to make your test preparation complete. The Microsoft AZ-700 exam questions simulate the actual exam pattern, allowing you to pass the Designing and Implementing Microsoft Azure Networking

Solutions certification exam the first time.

Microsoft Designing and Implementing Microsoft Azure Networking Solutions Sample Questions (Q84-Q89):

NEW QUESTION # 84

You have the Azure environment shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic. NOTE: Each correct selection is worth one point.

Answer Area

VM1 can communicate with [answer choice]

- the on-premises datacenter and VM2 only
- VM2 only
- VM2 and VM3 only
- the on-premises datacenter and VM2 only
- the on-premises datacenter, VM1, and VM3
- VM1 only
- VM1 and VM3 only
- the on-premises datacenter and VM3 only
- the on-premises datacenter, VM1, and VM3

Answer:

Explanation:

Answer Area

VM1 can communicate with [answer choice]

- the on-premises datacenter and VM2 only
- VM2 only
- VM2 and VM3 only
- the on-premises datacenter and VM2 only
- the on-premises datacenter, VM1, and VM3
- VM1 only
- VM1 and VM3 only
- the on-premises datacenter and VM3 only
- the on-premises datacenter, VM1, and VM3

NEW QUESTION # 85

Task 3

You plan to implement an Azure application gateway in the East US Azure region. The application gateway will have Web Application Firewall (WAF) enabled.

You need to create a policy that can be linked to the planned application gateway. The policy must block connections from IP addresses in the 131.107.150.0/24 range. You do NOT need to provision the application gateway to complete this task.

Answer:

Explanation:

See the Explanation below for step by step instructions.

Explanation

Here are the steps and explanations for creating a policy that can be linked to the planned application gateway and block connections from IP addresses in the 131.107.150.0/24 range:

- * To create a policy, you need to go to the Azure portal and select Create a resource. Search for WAF, select Web Application Firewall, then select Create1.
- * On the Create a WAF policy page, Basics tab, enter or select the following information and accept the defaults for the remaining settings:
 - * Policy for: Regional WAF (Application Gateway)
 - * Subscription: Select your subscription name
 - * Resource group: Select your resource group
 - * Policy name: Type a unique name for your WAF policy
- * On the Custom rules tab, select Add a rule to create a custom rule that blocks connections from IP addresses in the 131.107.150.0/24 range2. Enter or select the following information for the custom rule:
 - * Rule name: Type a unique name for your custom rule
 - * Priority: Type a number that indicates the order of evaluation for this rule
 - * Rule type: Select Match rule
 - * Match variable: Select RemoteAddr
 - * Operator: Select IPMatch
 - * Match values: Type 131.107.150.0/24
 - * Action: Select Block
- * On the Review + create tab, review your settings and select Create to create your WAF policy1.
- * To link your policy to the planned application gateway, you need to go to the Application Gateway service in the Azure portal and select your application gateway3.
- * On the Web application firewall tab, select your WAF policy from the drop-down list and select Save

NEW QUESTION # 86

You have an Azure subscription that contains a single virtual network and a virtual network gateway.

You need to ensure that administrators can use Point-to-Site (P2S) VPN connections to access resources in the virtual network.

The connections must be authenticated by Azure Active Directory (Azure AD).

What should you configure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Microsoft

Azure AD configuration:

- An access package
- A conditional access policy
- An enterprise application
- A VPN certificate

P2S VPN tunnel type:

- IKEv2
- IKEv2 and SSTP (SSL)
- OpenVPN (SSL)
- SSTP (SSL)

Answer:

Explanation:

Answer Area

Microsoft

Azure AD configuration:

- An access package
- A conditional access policy
- An enterprise application
- A VPN certificate

P2S VPN tunnel type:

- IKEv2
- IKEv2 and SSTP (SSL)
- OpenVPN (SSL)
- SSTP (SSL)

NEW QUESTION # 87

You have an Azure subscription that contains the resources shown in the following table.

Name	Type	Description
Gateway1	NAT gateway	Unconfigured
NIC1	Network interface	A network interface with a statically assigned public IP address named PIP1
PIP1	Public IP address	A Basic SKU public IP address
VNet1	Virtual network	Contains a subnet named Subnet1
Subnet1	Virtual subnet	Part of VNet1
VM1	Virtual machine	Connected to Subnet1 via NIC1

You need to associate Gateway 1 with Subnet1. The solution must minimize downtime on VM1.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

- Change the PIP1 SKU to **Standard**.
- Start VM1.
- Shut down VM1.
- Disassociate PIP1 from NIC1.
- Change Assignment to Dynamic for PIP1.
- Associate PIP1 to NIC1.

Answer Area

Answer:

Explanation:

Actions

- Change the PIP1 SKU to **Standard**.
- Start VM1.
- Shut down VM1.
- Disassociate PIP1 from NIC1.
- Change Assignment to Dynamic for PIP1.
- Associate PIP1 to NIC1.

Answer Area

- Disassociate PIP1 from NIC1.
- Change Assignment to Dynamic for PIP1.
- Associate PIP1 to NIC1.

Explanation:

Actions

- Change the PIP1 SKU to **Standard**.
- Start VM1.
- Shut down VM1.

Answer Area

- 1 Disassociate PIP1 from NIC1.
- 2 Change Assignment to Dynamic for PIP1.
- 3 Associate PIP1 to NIC1.

NEW QUESTION # 88

You are planning an Azure solution that will contain the following types of resources in a single Azure region:

- Virtual machine
- Azure App Service
- Virtual Network gateway
- Azure SQL Managed Instance

App Service and SQL Managed Instance will be delegated to create resources in virtual networks. You need to identify how many virtual networks and subnets are required for the solution. The solution must minimize costs to transfer data between virtual networks. What should you identify? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Virtual Networks:

1
2
3
4

Subnets:

1
2
3
4

Answer:

Explanation:

Virtual Networks:

1
2
3
4

Subnets:

1
2
3
4
