With the growing demand for DevOps professionals, earning the AZ-400 Certification can help individuals stand out in the job market and advance their careers.

Microsoft Designing and Implementing Microsoft DevOps Solutions Sample Questions (Q495-Q500):

NEW QUESTION # 495

You need to create and configure an Azure Storage account named az400lod11566895stor in a resource group named RG1lod11566895 to store the boot diagnostics for a virtual machine named VM1.

To complete this task, sign in to the Microsoft Azure portal.

Answer:

Explanation:

See solution below.

Explanation

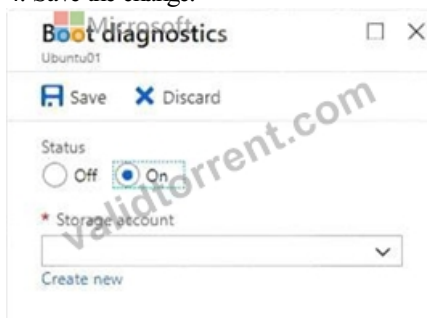

Step 1: To create a general-purpose v2 storage account in the Azure portal, follow these steps:

- * On the Azure portal menu, select All services. In the list of resources, type Storage Accounts. As you begin typing, the list filters based on your input. Select Storage Accounts.
- * On the Storage Accounts window that appears, choose Add.
- * Select the subscription in which to create the storage account.
- * Under the Resource group field, select RG1lod11566895
- * Next, enter a name for your storage account named: az400lod11566895stor
- * Select Create.

Step 2: Enable boot diagnostics on existing virtual machine

To enable Boot diagnostics on an existing virtual machine, follow these steps:

1. Sign in to the Azure portal, and then select the virtual machine VM1.
2. In the Support + troubleshooting section, select Boot diagnostics, then select the Settings tab.
3. In Boot diagnostics settings, change the status to On, and from the Storage account drop-down list, select the storage account az400lod11566895stor.
4. Save the change.

You must restart the virtual machine for the change to take effect.

NEW QUESTION # 496

Your company plans to deploy an application to the following endpoints:

- * Ten virtual machines hosted in Azure
- * Ten virtual machines hosted in an on-premises data center environment All the virtual machines have the Azure Pipelines agent.

You need to implement a release strategy for deploying the application to the endpoints.

What should you recommend using to deploy the application to the endpoints? To answer, drag the appropriate components to the correct endpoints. Each component may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

The screenshot shows a drag-and-drop interface with two columns: 'Components' and 'Answer Area'. The 'Components' column contains four items: 'A deployment group', 'A management group', 'A resource group', and 'Application roles'. The 'Answer Area' contains two text prompts: 'Ten virtual machines hosted in Azure:' and 'Ten virtual machines hosted in an on-premises data center environment:'. Each prompt has an empty rectangular box to its right for dropping a component. A watermark 'validtorrent.com' is visible across the interface.

Answer:

Explanation:

This screenshot shows the same interface as above, but with the 'A deployment group' component dragged into the empty boxes next to both text prompts in the 'Answer Area'. The 'A deployment group' text is now inside the boxes. The 'Components' column still shows 'A deployment group', 'A management group', 'A resource group', and 'Application roles'. A watermark 'validtorrent.com' is visible.

Explanation:

A close-up screenshot of the answer area showing the two text prompts and their corresponding boxes. The first prompt is 'Ten virtual machines hosted in Azure:' and the second is 'Ten virtual machines hosted in an on-premises data center environment:'. Both boxes contain the text 'A deployment group'. A watermark 'validtorrent.com' is visible.

Box 1: A deployment group

When authoring an Azure Pipelines or TFS Release pipeline, you can specify the deployment targets for a job using a deployment group.

If the target machines are Azure VMs, you can quickly and easily prepare them by installing the Azure Pipelines Agent Azure VM extension on each of the VMs, or by using the Azure Resource Group Deployment task in your release pipeline to create a deployment group dynamically.

Box 2: A deployment group

NEW QUESTION # 497

Your company has four projects. The version control requirements for each project are shown in the following table.

Project	Requirement
Project 1	Project leads must be able to restrict access to individual files and folders in the repository.
Project 2	The version control system must enforce the following rules before merging any changes to the main branch: <ul style="list-style-type: none"> • Changes must be reviewed by at least two project members. • Changes must be associated to at least one work team.
Project 3	The project members must be able to work in Azure Repos directly from Xcode.
Project 4	The release branch must only be viewable or editable by the project leads.

You plan to use Azure Repos for all the projects.

Which version control system should you use for each project? To answer, drag the appropriate version control systems to the correct projects. Each version control system may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Version Control Systems

Git

Perforce

Subversion

Team Foundation Version Control

NEW QUESTION # 498

How should you configure the filters for the Project5 trigger? To answer, select the appropriate option in the answer area.

NOTE: Each correct selection is worth one point.

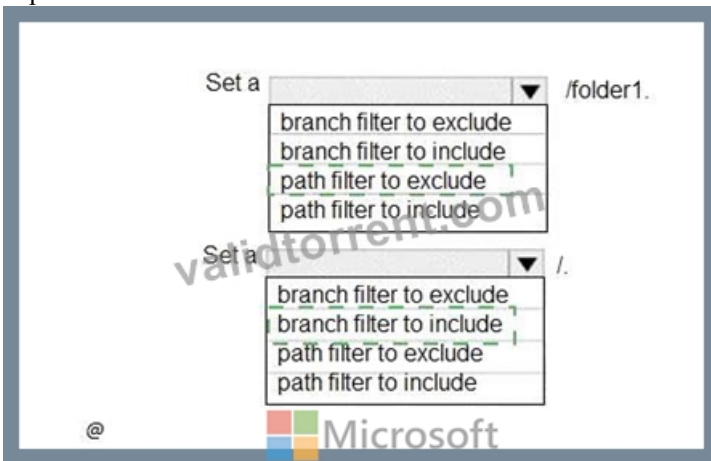

@

Answer:

Explanation:

Explanation:

@

Scenario:

Project5 will contain a Git repository in Azure Reports and a continuous integration trigger that will initiate a build in response to any change except for changes within /folder1 of the repository.

References: <https://docs.microsoft.com/en-us/azure/devops/pipelines/build/triggers>

NEW QUESTION # 499

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

The lead developer at your company reports that adding new application features takes longer than expected due to a large accumulated technical debt.

You need to recommend changes to reduce the accumulated technical debt.

Solution: You recommend increasing the test coverage.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

Instead reduce the code complexity.

Note: Technical debt is the accumulation of sub-optimal technical decisions made over the lifetime of an application. Eventually, it gets harder and harder to change things: it's the 'sand in the gears' that sees IT initiatives grind to a halt.
