## Free PDF Quiz 156-315.81 - Check Point Certified Security Expert R81 – Professional Valid Exam Duration

If you are looking to advance in the fast-paced and technological world, TestkingPDF is here to help you achieve this aim. TestkingPDF provides you with the excellent CheckPoint 156-315.81 practice exam, which will make your dream come true of passing the Check Point Certified Security Expert R81 certification exam on the first attempt.

## CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q114-Q119):

### NEW QUESTION # 114

Which member of a high-availability cluster should be upgraded first in a Zero downtime upgrade?

- A. The Standby Member
- B. The Active Member
- C. The Primary Member
- D. The Secondary Member

**Answer: A**

Explanation:

In a Zero downtime upgrade, you should upgrade the Standby Member first. This is because the Standby Member does not process traffic and can be upgraded without affecting the cluster availability. After upgrading the Standby Member, you can perform a failover and make it the Active Member. Then you can upgrade the original Active Member, which becomes the Standby Member after the failover.

### NEW QUESTION # 115

What are the minimum open server hardware requirements for a Security Management Server/Standalone in R81?

- A. 2 CPU cores, 4GB of RAM and 15GB of disk space
- B. 8 CPU cores, 32GB of RAM and 1 TB of disk space
- C. 4 CPU cores, 8GB of RAM and 500GB of disk space
- D. 8 CPU cores, 16GB of RAM and 500 GB of disk space

**Answer: C**

Explanation:

Explanation

The minimum open server hardware requirements for a Security Management Server/Standalone in R81 are:

CPU: Intel Core i5-4590 or equivalent (4 cores)

Memory: 8 GB RAM

Disk space: 500 GB

The other options do not match the minimum requirements. Option A has insufficient CPU cores, memory and disk space. Option B has excessive CPU cores and disk space. Option D has excessive CPU cores, memory and disk space.

### NEW QUESTION # 116

What is the best sync method in the ClusterXL deployment?

- A. Use 1 cluster + 1st sync
- B. Use 3 clusters + 1st sync + 2nd sync + 3rd sync
- C. Use 1 dedicated sync interface
- D. Use 2 clusters + 1st sync + 2nd sync

**Answer: C**

Explanation:

The best sync method in the ClusterXL deployment is to use one dedicated sync interface. This means that one interface on each cluster member is used exclusively for synchronization traffic, which improves performance and security. Using multiple clusters or sync interfaces is not recommended, as it can cause network congestion or synchronization issues. ### NEW QUESTION # 117

Which components allow you to reset a VPN tunnel?

- A. SmartView monitor only
- B. delete vpn ike sa or vpn she11 command
- C. vpn tunnelutil or delete vpn ike sa command
- D. vpn tu command or SmartView monitor

**Answer: D**

Explanation:

The `vpn tu` command and the SmartView Monitor are two components that allow you to reset a VPN tunnel.

The `vpn tu` command is a command-line tool that lets you view and manage the status of VPN tunnels on a Security Gateway or cluster member. The SmartView Monitor is a graphical tool that lets you monitor the network and security performance, view VPN tunnel status, and reset VPN tunnels. Both components can be used to reset a VPN tunnel by selecting the option to delete IKE SA or IPsec SA for a specific peer or all peers. #### NEW QUESTION # 118

When simulating a problem on ClusterXL cluster with `cphaprob -d STOP -s problem -t 0 register`, to initiate a failover on an active cluster member, what command allows you remove the problematic state?

- A. `cphaprob -d STOP unregister`
- B. `cphaprob unregister STOP`
- C. `cphaprob -d unregister STOP`
- D. `cphaprob STOP unregister`

**Answer: A**

Explanation:

When simulating a problem on a ClusterXL cluster with the command "`cphaprob -d STOP -s problem -t 0 register`" to initiate a failover on an active cluster member, you can use the command "`cphaprob -d STOP unregister`" to remove the problematic state and return the cluster to normal operation.

Option A correctly identifies the command that allows you to remove the problematic state, making it the verified answer.
