BONUS!!! Download part of PracticeMaterial CDPSE dumps for free: https://drive.google.com/open?id=1A7DUoCKm2RZB_GklzIHlkhZAXvHoDaKM

The excellent ISACA CDPSE practice exam from PracticeMaterial can help you realize your goal of passing the ISACA CDPSE certification exam on your very first attempt. Most people find it difficult to find excellent ISACA CDPSE Exam Dumps that can help them prepare for the actual Certified Data Privacy Solutions Engineer CDPSE exam.

Professionals interested in taking the CDPSE exam must have at least five years of experience in data privacy or related fields. A combination of education and experience may also be considered. In addition to meeting the eligibility requirements, candidates must also adhere to ISACA's Code of Professional Ethics and Continuing Professional Education (CPE) policy. This ensures that they are committed to upholding the highest ethical standards and staying up-to-date with the latest developments in the field.

The CDPSE Certification is ideal for professionals who work in data privacy, security, compliance, risk management, and audit functions. It is also suitable for individuals who are responsible for managing privacy programs in organizations of all sizes and industries. To be eligible for the certification, candidates must have at least five years of work experience, including a minimum of three years of experience in privacy, and have completed a privacy-based training course.

Exam CDPSE Success - 100% Efficient Questions Pool

Now on the Internet, a lot of online learning platform management is not standard, some web information may include some viruses, cause far-reaching influence to pay end users and adverse effect. If you purchase our CDPSE test torrent this issue is impossible. We hire experienced staff to handle this issue perfectly. We are sure that our products and payment process are surely safe and anti-virus. If you have any question about downloading and using our CDPSE Study Tool, we have professional staff to remotely handle for you immediately, let users to use the Certified Data Privacy Solutions Engineer guide torrent in a safe environment, bring more comfortable experience for the user.

ISACA Certified Data Privacy Solutions Engineer Sample Questions (Q49-Q54):

NEW QUESTION # 49

An organization wants to ensure that endpoints are protected in line with the privacy policy. Which of the following should be the FIRST consideration?

- A. Hardening the operating systems of endpoint devices
- B. Managing remote access and control
- C. Implementing network traffic filtering on endpoint devices
- D. Detecting malicious access through endpoints

Answer: C

NEW QUESTION # 50

Which of the following is MOST important to establish within a data storage policy to protect data privacy?

- A. Data redaction
- B. Data quality assurance (QA)
- **C. Irreversible disposal**
- D. Collection limitation

Answer: C

Explanation:

Explanation

Irreversible disposal is a process of removing or destroying data from a storage device or media to prevent unauthorized access or recovery of the data. Irreversible disposal is the most important thing to establish within a data storage policy to protect data privacy, as it reflects the principles of data minimization and storage limitation, which require limiting the collection, storage and processing of personal data to what is necessary and relevant for the intended purposes, and deleting or disposing of personal data when it is no longer needed or justified. Irreversible disposal also helps to reduce the privacy risks and costs associated with data storage and retention, such as data breaches, unauthorized access, misuse or loss of data. The other options are not as important as irreversible disposal in protecting data privacy within a data storage policy.

Data redaction is a technique that removes or obscures sensitive or confidential information from a document or file, but it does not address the issue of data retention or deletion. Data quality assurance (QA) is a process of ensuring that the data meets the standards and specifications of accuracy, completeness, consistency and reliability, but it does not address the issue of data retention or deletion. Collection limitation is a principle that requires limiting the collection of personal data to what is necessary and relevant for the intended purposes, but it does not address the issue of data retention or deletion¹, p. 75-76 References: 1: CDPSE Review Manual (Digital Version)

NEW QUESTION # 51

Which of the following is the FIRST step toward the effective management of personal data assets?

- A. Analyze metadata.
- **B. Create a personal data inventory**
- C. Establish data security controls.
- D. Minimize personal data

Answer: B

Explanation:

The first step toward the effective management of personal data assets is to create a personal data inventory, which is a comprehensive list of the personal data that an organization collects, processes, stores, transfers, and disposes of. A personal data inventory helps an organization to understand the types, sources, locations, owners, purposes, and retention periods of the personal data it holds, as well as the risks and obligations associated with them. A personal data inventory is essential for complying with data privacy laws and regulations, such as the GDPR or the PDPA, which require organizations to implement data protection principles and practices, such as obtaining consent, providing notice, ensuring data quality and security, respecting data subject rights, and reporting data breaches. A personal data inventory also helps an organization to identify and mitigate data privacy risks and gaps, and to implement data minimization and data security controls.

NEW QUESTION # 52

Which of the following practices BEST indicates an organization follows the data minimization principle?

- A. Data is encrypted before storage.
- B. Data is only accessible on a need-to-know basis.

- C. Data is pseudonymized when being backed up.
- **D. Data is regularly reviewed for its relevance**

Answer: D

Explanation:

The practice that best indicates an organization follows the data minimization principle is that data is regularly reviewed for its relevance. The data minimization principle is one of the core principles of data protection under various laws and regulations, such as the GDPR or the CCPA. It states that personal data should be adequate, relevant, and limited to what is necessary in relation to the purposes for which they are processed. By regularly reviewing the data they hold, organizations can ensure that they do not collect or retain excessive or unnecessary data that may pose privacy risks or violate data subject rights.

Data is pseudonymized when being backed up, data is encrypted before storage, or data is only accessible on a need-to-know basis are also good practices for data protection, but they do not directly indicate that the organization follows the data minimization principle. Pseudonymization is a process of replacing identifying information in data with artificial identifiers or pseudonyms.

Pseudonymization can help enhance the privacy of data by reducing the linkability between data and data subjects, but it does not prevent re-identification or inference attacks. Encryption is a process of transforming data into an unreadable form using a secret key or algorithm. Encryption can help protect the confidentiality, integrity, and availability of data by preventing unauthorized access, disclosure, or modification. Access control is a process of restricting who can access, modify, or delete data based on their roles, permissions, or credentials. Access control can help prevent unauthorized or inappropriate use of data by limiting the scope of access.

NEW QUESTION # 53

What type of personal information can be collected by a mobile application without consent?

- A. Phone number
- B. Geolocation
- C. Full name
- **D. Accelerometer data**

Answer: D

NEW QUESTION # 54
