Microsoft Dynamics 365: Finance and Operations Apps Solution Architect Sample Questions (Q231-Q236):

NEW QUESTION # 231

A company implements Dynamics 365 Finance.

A sales order confirmation report does not meet the company's branding standards. The report must include header notes and a colorful logo.

You must enable modern design for additional reports created by users in the future.

You need to meet the branding standards and enable additional forms and reports to be created by users.

What should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Requirement	Solution
Add colorful logo and header notes.	<ul style="list-style-type: none"> Modern reports branding details Print management configuration Business document management
Enable forms by users.	<ul style="list-style-type: none"> Modern reports branding details SQL Server Reporting Services (SSRS) report design Print management configuration Business document management

Answer:

Explanation:

Requirement	Solution
Add colorful logo and header notes.	<ul style="list-style-type: none"> Modern reports branding details Print management configuration Business document management
Enable forms by users.	<ul style="list-style-type: none"> Modern reports branding details SQL Server Reporting Services (SSRS) report design Print management configuration Business document management

Explanation:

Box 1: Modern reports branding details

Modern report designs in Microsoft Dynamics 365 for Finance and Operations. The logos, color schemes, and notes are setup in "Organization administration" -> "Setup" -> "Document branding" -> "Branding details".

Box 2: Business document management

Business document management is built on top of the ER framework and enables business users to edit business document templates by using Microsoft 365 service or appropriate Microsoft Office desktop application. Edits to the documents might include changing business document designs and adding placeholders for additional data without source code changes and new deployments. No knowledge of the ER framework is required to update templates of business documents.

Note:

Business users use the Electronic reporting (ER) framework to configure formats for outbound documents in accordance with the legal requirements of various countries/regions. Users can also define the dataflow to specify what application data is placed in generated documents. The ER framework generates outbound documents in Microsoft Office formats (Excel workbooks or Word

documents) by using predefined templates.

NEW QUESTION # 232

A graphics printing company using Dynamics 365 Supply Chain Management sells 100 percent made-to-order signs. These signs cannot be pre-produced.

The company wants to create an end-to-end process that includes production, sales order packing, and sales order picking. You need to determine the order of the functions.

In which order should you recommend the actions be performed? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer area
Pack the box for the sales order.	
Use a production order to create the product.	
Pick for the sales order.	
Take a sales order.	
Process the sales order invoice.	

Answer:

Explanation:

Actions	Answer area
Pack the box for the sales order.	Take a sales order.
Use a production order to create the product.	Use a production order to create the product.
Pick for the sales order.	Pick for the sales order.
Take a sales order.	Pack the box for the sales order.
Process the sales order invoice.	Process the sales order invoice.

NEW QUESTION # 233

A distribution company uses Dynamics 365 Supply Chain Management.

The company has one buyer group for paper products and another buyer group for chemicals. Each buyer group purchases from separate vendors.

The buyers print individual purchase order confirmations to PDF files and then send the PDF files to their desktop printer.

The company purchases two network printers. Each buyer group receives one printer.

Each buyer group must send PDF files to their own printer.

You need to configure Dynamics 365 Supply Chain Management to support the requirement.

Which two features should you configure? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Electronic reporting tool
- B. Power BI
- C. Print management
- D. Document Routing Agent
- E. Power Automate

Answer: C,D

Explanation:

A: Install the Document Routing Agent to enable network printing.

The Document Routing Agent is a downloadable application that you can use to enable network printing scenarios. You can enable network printers for specific companies by using in-client administrative pages.

C: Print management is the framework in Dynamics 365 Finance and Operations that allows users to configure print settings for

various business documents, including sending emails and archiving. Print management setups are typically separated by module and include nodes for all business documents that are available to be printed.

NEW QUESTION # 234

You need to create a plan that meets the following requirements:

- * Migrate the data to the new system.
- * Implement a standardized method for creating items.
- * Prevent items from being created in different ways going forward.

Which two actions should you recommend? Each correct answer presents a complete answer. NOTE: Each correct selection is worth one point.

- A. Suggest a Master Data Management team who standardizes the item master.
- B. Suggest creating a Power BI report to identify like-items after migration.
- C. Migrate existing items as-is.
- D. Migrate items in the cutover plan before the annual update of items.
- E. Migrate item data in the cutover plan after the annual updates of items.

Answer: A,B

NEW QUESTION # 235

A company uses Dynamics 365 Supply Chain Management.

A user reports an error on a transaction in the production environment that occurred 30 days ago.

You need to move the current data from the production environment to the sandbox environment to troubleshoot the transaction error. You must back up the sandbox environment before you copy data to the production environment.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Requirement	Action
Back up the current sandbox environment data.	<input type="checkbox"/> Export database <input type="checkbox"/> Import database <input type="checkbox"/> Point-in-time restore <input type="checkbox"/> Refresh database
Move data from the production environment to the sandbox environment.	<input type="checkbox"/> Point-in-time restore <input type="checkbox"/> Refresh database <input type="checkbox"/> Rollback

Answer:

Explanation:

Requirement

Action

Back up the current sandbox environment data.

Move data from the production environment to the sandbox environment.

Explanation

Box 1: Export database

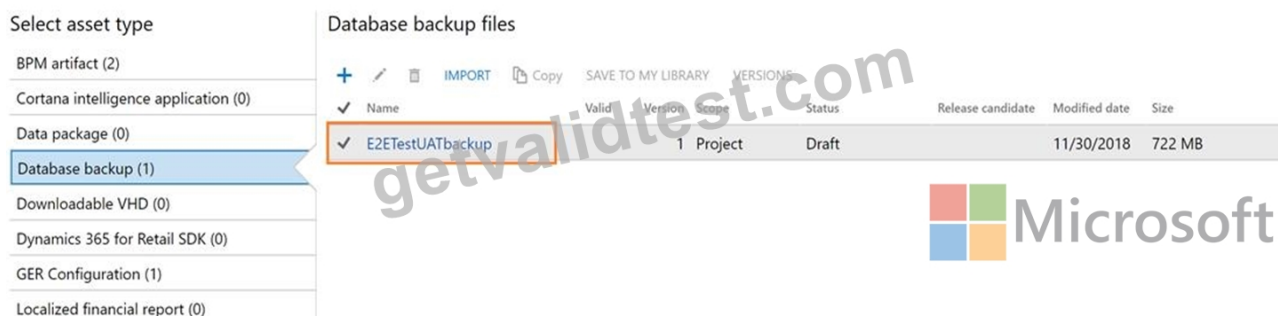

Export a database

Dynamics Lifecycle Services (LCS) to export a database from a sandbox user acceptance testing (UAT) environment to the Asset library.

After the export operation completes successfully, sign out of the servicing operation on your Environment details page. You can then see the asset in your Asset Library in the Database backups section.

Graphical user interface, text, application, Word Description automatically generated

Asset library

The .bacpac files are stored here and can be manually downloaded to your Tier 1 developer environments for import.

Box 2: Refresh database

Refresh database

You can use Microsoft Dynamics Lifecycle Services (LCS) to perform a refresh of the database to a sandbox user acceptance testing (UAT) environment. A database refresh lets you copy the transactional and financial reporting databases of your production environment into the target, sandbox UAT environment. If you have another sandbox environment, you can also copy the databases from that environment to your target, sandbox UAT environment.
