

# Oracle 1z0-1104-25 Exam Syllabus, 1z0-1104-25 Hot Questions

P.S. Free & New 1z0-1104-25 dumps are available on Google Drive shared by NewPassLeader: [https://drive.google.com/open?id=1\\_nvqEa3fsF3KIfpTkcLNsuBu6LFUkH14](https://drive.google.com/open?id=1_nvqEa3fsF3KIfpTkcLNsuBu6LFUkH14)

There are some education platforms in the market for college students or just for the use of office workers, which limits the user groups of our 1z0-1104-25 study guide to a certain extent. And we have the difference compared with the other 1z0-1104-25 Quiz materials for our study materials have different learning segments for different audiences. We have three different versions of our 1z0-1104-25 exam questions on the formats: the PDF, the Software and the APP online.

Everybody should recognize the valuable of our life; we can't waste our time, so you need a good way to help you get your goals straightly. Of course, our 1z0-1104-25 latest exam torrents are your best choice. I promise you that you can learn from the 1z0-1104-25 Exam Questions not only the knowledge of the certificate exam, but also the ways to answer questions quickly and accurately. Now, you can free download the demo of our 1z0-1104-25 test torrent to have a check on our wonderful quality.

## 1z0-1104-25 Hot Questions, New 1z0-1104-25 Test Pdf

You can change the time and type of questions of the Oracle 1z0-1104-25 exam dumps. Oracle Cloud Infrastructure 2025 Security Professional practice questions improve your confidence and ability to complete the exam timely. The Oracle 1z0-1104-25 real questions are an advanced strategy to prepare you according to the test service. The Oracle 1z0-1104-25 Practice Exam software keeps track of previous attempts and shows the changes in each attempt. Knowing your weaknesses and overcoming them before the Oracle 1z0-1104-25 exam is easy.

## Oracle Cloud Infrastructure 2025 Security Professional Sample Questions (Q27-Q32):

### NEW QUESTION # 27

Challenge 2 -Task 1

In deploying a new application, a cloud customer needs to reflect different security postures. If a security zone is enabled with the

Maximum Security Zone recipe, the customer will be unable to create or update a resource in the security zone if the action violates the attached Maximum Security Zone policy.

As an application requirement, the customer requires a compute instance in the public subnet. You therefore, need to configure Custom Security Zones that allow the creation of compute instances in the public subnet.

Review the architecture diagram, which outlines the resources you'll need to address the requirement:

Preconfigured

To complete this requirement, you are provided with the following:

Access to an OCI tenancy, an assigned compartment, and OCI credentials

Required IAM policies

Task 1: Create a Custom Security Zone Recipe

Create a Custom Security Zone Recipe named IAD-SP-PBT-CSP-01 that allows the provisioning of compute instances in the public subnet.

Enter the OCID of the created custom security zone recipe in the text box below.

**Answer:**

Explanation:

See the solution below in Explanation.

Explanation:

To create a Custom Security Zone Recipe named IAD-SP-PBT-CSP-01 that allows the provisioning of compute instances in a public subnet, we will follow the steps outlined in the Oracle Cloud Infrastructure (OCI) Security Zones documentation. These steps are based on verified procedures from the OCI Security Zone Guide and related resources.

Step-by-Step Solution for Task 1: Create a Custom Security Zone Recipe

\* Log in to the OCI Console:

\* Use your OCI credentials to log in to the OCI Console (<https://console.us-ashburn-1.oraclecloud.com>).

\* Ensure you have access to the assigned compartment provided in the tenancy.

\* Navigate to Security Zones:

\* From the OCI Console, go to the navigation menu (hamburger icon) on the top left.

\* Under Governance and Administration, select Security Zones.

\* Create a New Security Zone Recipe:

\* In the Security Zones dashboard, click on the Recipe tab.

\* Click the Create Recipe button.

\* Configure the Recipe Details:

\* Name: Enter IAD-SP-PBT-CSP-01.

\* Description: (Optional) Add a description, e.g., "Custom recipe to allow compute instances in public subnet."

\* Leave the Compartment as the assigned compartment provided.

- \* Define the Security Zone Policy:
  - \* In the policy editor, start with a base policy. Since the Maximum Security Zone recipe restricts public subnet usage, you need to customize it.
  - \* Add the following policy statement to allow compute instances in a public subnet:  
Allow service compute to use virtual-network-family in compartment <compartment-name> where ALL { target.resource.type = 'Instance', target.vcn.cidr\_block = '10.0.0.0/16', target.subnet.cidr\_block = '10.0.10.0/24' }
  - \* Replace <compartment-name> with the name of your assigned compartment.
  - \* This policy allows the Compute service to provision instances in the public subnet (10.0.10.0/24) within the VCN (10.0.0.0/16).
  - \* Adjust Restrictions:
  - \* Ensure the recipe does not inherit the Maximum Security Zone recipe's default restrictions that block public subnet usage. Explicitly allow the public subnet by including the subnet CIDR block (10.0.10.0/24) in the policy.
  - \* Remove or modify any conflicting default rules that prohibit public subnet usage (e.g., rules blocking internet access or public IP assignment).
  - \* Save the Recipe:
  - \* Click Create to save the custom security zone recipe.
  - \* Once created, note the OCID of the recipe from the recipe details page. The OCID will be a unique identifier starting with ocid1.securityzonerecipe.
  - \* Verify the Recipe:
  - \* Go to the Recipe tab and locate IAD-SP-PBT-CSP-01.
  - \* Ensure the policy reflects the allowance for compute instances in the public subnet by reviewing the policy statement. OCID of the Created Custom Security Zone Recipe
  - \* The exact OCID will be generated upon creation (e.g., ocid1.securityzonerecipe.oc1..unique\_string).
- Please enter the OCID displayed in the OCI Console after completing Step 7.
- Notes
- \* Ensure IAM policies are correctly configured to grant you permissions to create and manage security zone recipes in the compartment.
  - \* The policy assumes the public subnet CIDR (10.0.10.0/24) matches the diagram. Adjust if the actual subnet CIDR differs.
  - \* Test the recipe by associating it with a security zone and attempting to launch a compute instance to confirm compliance.

### NEW QUESTION # 28

A company has deployed OCI Zero Trust Packet Routing (ZPR) to secure its network. They have two compute instances, VM1-01 and VM-02, in a public subnet. VM-01 is tagged with the security attribute app:vm01, and VM-02 is tagged with app:vm02. The VCN is labeled with network:vcn01, The ZPR policy states:

"What is the expected outcome of this policy?"

- A. Neither VM-01 nor VM-02 can SSH into each other."
- B. VM-01 can SSH into VM-02, but VM-02 cannot SSH into VM-01.

- C. VM-02 can SSH into VM-01, but VM-01 cannot SSH into VM-02.
- D. Both VM-01 and VM-02 can SSH into each other.

**Answer: B**

### NEW QUESTION # 29

Task 5: Create a Certificate

Create a certificate, where:

Certificate name: PBT-CERT-01-<username>

For example, if your username is 99008677-lab.user01, then the certificate name should be PBT-CERT-0199008677labuser01

Ensure you eliminate special characters from the user name.

Common name: PBT-CERT-OCICERT-01

Certificate Authority: PBT-CERT-CA-01 (created in the previous task)

**Answer:**

Explanation:

See the solution below in Explanation.

Explanation:

Since I can't create resources or retrieve OCIDs directly in your OCI environment, I'll provide a step-by-step solution based on verified OCI documentation and best practices as of 02:30 PM BST on Thursday, June 12, 2025. Follow these instructions precisely in the OCI Console or CLI, using the preconfigured PBI\_Vault\_SP vault and the PBT-CERT-CA-01<username> Certificate Authority created in the previous task. Replace <username> with your actual username (e.g., 99008677-lab.user01), ensuring special characters are removed.

Task 5: Create a Certificate

Step 1: Access the OCI Vault

\* Log in to the OCI Console.

\* Navigate to Identity & Security > Vault.

\* Select the root compartment.

\* Locate and click on the vault named PBI\_Vault\_SP.

Step 2: Create the Certificate

\* In the PBI\_Vault\_SP vault details page, under Resources, click Certificates.

\* Click Create Certificate.

\* Enter the following details:

\* Name: Replace <username> with your username (e.g., if your username is 99008677-lab.user01, remove special characters like - and . to get 99008677labuser01, then use PBT-CERT-0199008677labuser01).

\* Common Name: Enter PBT-CERT-OCICERT-01.

\* Certificate Authority: Select the PBT-CERT-CA-01<username> CA created in Task 4 (e.g., PBT-CERT-CA-0199008677labuser01).

\* Subject: Leave as default or adjust (e.g., Organization, Country) if required.

\* Validity Period: Set as needed (e.g., 1 year), or use the default.

\* Compartment: Ensure it's set to the root compartment.

\* Click Create Certificate and wait for the certificate to be issued.

Step 3: Verify the Certificate

\* After creation, go to the Certificates section under PBI\_Vault\_SP.

\* Confirm the certificate PBT-CERT-01<username> (e.g., PBT-CERT-0199008677labuser01) is listed and its status is active.

### NEW QUESTION # 30

"A company, ABC, is planning to launch a new web application on OCI. Based on past experiences, they expect a significant surge in traffic after the launch. You are responsible for ensuring that the application is highly available.

Which step would you perform to achieve this goal?

- A. Configure Cloud Guard to prevent large amounts of traffic from reaching the web application.
- **B. Use a load balancer to distribute incoming traffic evenly across multiple instances of the web application.**
- C. Implement security controls, such as web application firewalls, to protect against common attack vectors.
- D. Use a Virtual Cloud Network (VCN) with subnets, security lists, and routing rules to isolate the web application from the

Internet and other resources.

**Answer: B**

### NEW QUESTION # 31

You're managing an Oracle Cloud Infrastructure (OCI) environment where a public website hosts downloadable assets stored in Object Storage buckets. These buckets need to be publicly accessible for website visitors, but Cloud Guard keeps flagging them as security risks.

How can Cloud Guard be configured to ignore problems specific to public buckets while still ensuring security checks are applied to other resources that require them?

- A. Resolve or remediate the problems by making the buckets private.
- **B. Fix the baseline by configuring the Conditional groups for the detector.**
- C. A public bucket is a security risk, so Cloud Guard will keep detecting it.
- D. Dismiss problems associated with those resources.

**Answer: B**

### NEW QUESTION # 32

.....

We have created a number of reports and learning functions for evaluating your proficiency for the 1z0-1104-25 exam dumps. In preparation, you can optimize 1z0-1104-25 practice exam time and question type by utilizing our 1z0-1104-25 Practice Test NewPassLeader. NewPassLeader makes it easy to download 1z0-1104-25 exam questions immediately after purchase. You will receive a registration code and download instructions via email.

**1z0-1104-25 Hot Questions:** <https://www.newpassleader.com/Oracle/1z0-1104-25-exam-preparation-materials.html>

As long as you have problem on our 1z0-1104-25 exam questions, you can contact us at any time, Oracle 1z0-1104-25 Exam Syllabus With a qualification, you are qualified to do this professional job, Oracle 1z0-1104-25 Exam Syllabus We defy difficult solutions and will let you pass the exam with ease, Oracle 1z0-1104-25 Exam Syllabus This will confirm you get the latest version, But with our 1z0-1104-25 practice engine, your concerns are all solved.

A possible mitigation for this is to chain 1z0-1104-25 Exam Syllabus multiple proxies together in an attempt to confuse any onlookers and potential attackers, Disable object checksum, As long as you have problem on our 1z0-1104-25 Exam Questions, you can contact us at any time.

## Explore the Benefits and Oracle 1z0-1104-25 Exam Preparation Strategies

With a qualification, you are qualified to do this professional 1z0-1104-25 job, We defy difficult solutions and will let you pass the exam with ease, This will confirm you get the latest version.

But with our 1z0-1104-25 practice engine, your concerns are all solved.
