Topic 4	<ul style="list-style-type: none"> <li>• PI Execution: This topic discusses PO Sync, System Demo, Innovation and Planning Iteration, and Inspect and Adapt.</li> </ul>

## Scrum SAFe Product Owner/Product Manager POPM (6.0) Sample Questions (Q32-Q37):

### NEW QUESTION # 32

What increases the effectiveness of System Demos?

- A. Spend a lot of time preparing for the demo
- B. Limit team attendance to minimize disruptions to the team
- C. Consider how and what to demo during Iteration Planning
- D. Focus on team-level Metrics

**Answer: C**

Explanation:

Considering how and what to demo during Iteration Planning increases the effectiveness of System Demos, which are events that provide an integrated view of new features delivered by the Agile Release Train (ART) in each Iteration<sup>12</sup>. By thinking ahead of how and what to demo, the teams can:

\* Align on the product vision and roadmap and ensure that the work items are aligned with the customer value and the PI objectives<sup>12</sup>.

\* Define clear and testable acceptance criteria for each work item and plan how to verify them in the demo<sup>12</sup>.

\* Identify and resolve any dependencies, risks, or impediments that may affect the demo<sup>12</sup>.

\* Prepare the demo environment and the necessary tools and data to support the demo<sup>12</sup>.

\* Practice the demo and rehearse the script and the roles of the presenters<sup>12</sup>.

Some additional information that might be helpful for you are:

\* The other options (A, B, and C) are not actions that increase the effectiveness of System Demos, but rather actions that may reduce it.

\* Spending a lot of time preparing for the demo may not be effective, as it may take away time and focus from the actual development and testing of the work items. Instead, the teams should aim for continuous integration and built-in quality practices that enable them to demo the work items as soon as they are done<sup>12</sup>.

\* Limiting team attendance to minimize disruptions to the team may not be effective, as it may reduce the feedback and collaboration opportunities that the demo provides. Instead, the teams should invite and engage all the relevant stakeholders, such as Business Owners, executive sponsors, other Agile Teams, development management, and customers, to the demo<sup>12</sup>.

\* Focusing on team-level metrics may not be effective, as it may not reflect the true value and progress of the integrated work across the ART. Instead, the teams should focus on system-level metrics, such as PI objectives, solution quality, and customer satisfaction, to evaluate the outcome and impact of the demo<sup>12</sup>.

### NEW QUESTION # 33

What is one responsibility of the Product Owner during Team Sync?

- A. To facilitate the event
- B. To add new work into the Iteration
- C. To clarify Story intent
- D. To relay Customer feedback

**Answer: C**

Explanation:

Explanation

One responsibility of the Product Owner during Team Sync is to clarify the intent behind each user story or backlog item. This includes providing additional context, details, and answering any queries raised by the development team<sup>1</sup>. The Team Sync is a daily event where the members of the Agile team synchronize their work and plan for the next 24 hours<sup>2</sup>. The Product Owner participates in the Team Sync to ensure that the team is working on the right things and that the stories are aligned with the customer and stakeholder needs<sup>3</sup>.

### NEW QUESTION # 34

What is one purpose of the System Demo?

- A. To plan the Inspect and Adapt (I and A) event
- B. To demonstrate the full Solution in a production-like context
- C. To demonstrate a team's build
- D. To visualize flow, dependencies, and risks

**Answer: B**

Explanation:

The SAFe POPM workbook explains that the System Demo demonstrates progress from the full system and should be run from a staging environment that resembles production as much as possible. The PI System Demo also demonstrates the current state of the Solution to appropriate stakeholders. This aligns with demonstrating the full Solution in a production-like context, not merely a single team's build.

### NEW QUESTION # 35

What summarizes the business and technical goals that teams and trains intend to achieve in the upcoming PI?

- A. Milestones
- B. PI Objectives
- C. Dependencies
- D. ART PI Risks

**Answer: B**

Explanation:

The SAFe POPM workbook defines PI Objectives as "a summary of the business and technical goals that each team and the overall ART intend to achieve in the upcoming PI." Therefore, the correct answer is PI Objectives.

### NEW QUESTION # 36

What is one input to the Vision?

- A. Customer feedback

- B. Team topologies
- C. Portfolio Backlog
- D. Feature context

**Answer: A**

Explanation:

One input to the Vision is customer feedback. Customer feedback is the information and opinions that customers and stakeholders provide about the solution, its features, and its value proposition<sup>1</sup>. Customer feedback helps to validate the assumptions, test the hypotheses, and measure the satisfaction of the solution<sup>2</sup>.

Customer feedback also helps to identify the needs, preferences, and expectations of the customers and stakeholders, which are essential for defining and communicating the Vision<sup>3</sup>. The Vision is a description of the future state of the solution under development, and it reflects the problem(s) that the solution will solve and the benefits that it will deliver<sup>4</sup>.
