Salesforce Plat-Admn-301 Exam Syllabus Topics:

Topic	Details
Topic 1	• Data and Analytics Management: This section of the exam measures skills of Salesforce Data Analyst and covers data quality assessment, data enrichment, and duplicate management. It explains how to choose appropriate reporting and analytics tools for advanced requirements, including custom report types, snapshots, formulas, joined reports, and dashboard configurations. It also covers methods for connecting external data sources using big objects, external objects, data warehouses, data lakes, and Salesforce Connect. Finally, it describes the suitable tools and methods for importing data, including Data Loader, Data Import Wizard, and external IDs.
Topic 2	• Environment Management and Deployment: This section of the exam measures skills of Salesforce Administrator and covers moving metadata between environments using tools such as sandboxes, change sets, and managed or unmanaged AppExchange packages. It explains the capabilities and best practices related to deploying changes through change sets to ensure smooth and controlled migrations.

Topic 3	• Auditing and Monitoring: This section of the exam measures skills of a Salesforce Support Specialist and covers the tools used to monitor system behavior and review user activity. It includes understanding debug logs, setup audit trail, and methods for ensuring sensitive data is handled correctly in both production and sandbox environments. It also explains how to review and troubleshoot security settings, including recognizing pending updates that might affect system access.
Topic 4	• Security and Access: This section of the exam measures the skills of Salesforce Administrator and covers how record-level access, field access, and sharing models impact data visibility across the system. It focuses on understanding controlled-by-parent relationships, territory management, role hierarchies, and access to reports, dashboards, and email folders. It also includes comparing custom profiles, permission sets, and delegated administration, along with evaluating different authentication methods. The section also addresses the structure of business models such as person accounts, standard accounts, contacts, and contact-to-multiple-account relationships.
Topic 5	• Cloud Applications: This section of the exam measures skills of Salesforce Consultant and covers the standard Salesforce capabilities that support sales and service operations. It includes features such as products, price books, schedules, orders, quotes, and the tools that help with forecasting and territory management. The section also describes how to create Salesforce Knowledge articles, manage entitlements, support service workflows, and enable interactions through chat, case feed, Omni-Channel, console apps, and Experience Cloud sites. It also introduces the broader Salesforce suite that extends core platform functionality.

Salesforce Certified Platform Administrator II Sample Questions (Q127-Q132):

NEW QUESTION # 127
Cloud Kicks has two record-triggered flows on the same object. One flow creates a child record when criteria are met. The second record-triggered flow is based on criteria to check if the child record exists and updates a field. The field on the child record that needs to be updated Is still null after the second record trigger.
What should the administrator do to resolve this issue?

- A. Have the record-triggered flows fire on create or edit to update the field.
- B. Combine the two flows into one with checks to see which part of the flow needs to be run.
- C. Make a new record-triggered flow on the child object to update the field on the parent record.
- D. flows into schedule flows and have them update the field.

Answer: B

Explanation:
Flows are tools that automate business processes by collecting data and performing actions in your org or an external system. Flows can be triggered by various events such as record creation, updates, or invocations from other processes or flows. Flows can also have decision elements that evaluate conditions and determine which path to follow in the flow. By combining the two flows into one with decision elements, the administrator can ensure that the flow runs in the correct order and updates the field on the child record after it is created by the first flow. NEW QUESTION # 128

The administrator at Ursa Major Solar has set up IT policies for all user passwords to be a minimum length of
3 characters and have an expiration period of 90 days. The security team recently decided that administrators of any system should
have a 15-character minimum password with a 30-day expiration period.
Where should the administrator make this change?

- A. Password complexity requirements on the permission set
- B. Session Settings on the User record
- C. Organi2ation-wide password policies
- D. Password Policies on the System Administrator profile .

Answer: D

Explanation:
Password Policies on the System Administrator profile is a feature that allows administrators to set different password requirements
for users with different profiles. Password Policies can specify the minimum length, complexity, expiration period, history
enforcement, lockout interval, and warning message for passwords.
Password Policies can be used to enforce stricter password requirements for system administrators than for other users

NEW QUESTION # 129

AW Computing has a new requirement from its security team where audit information relating to an account must be recorded in a
new custom object called Audit. Audit records need to be preserved for 10 years and only accessible by the audit team.

- A. Connected App Usage
- B. Grant Account Login Access
- C. Setup Audit Trail
- D. Login History

Answer: B

NEW QUESTION # 130

Ursa Major Solar (UMS) wants to identify customers that need to install a new solar panel monitor system it recently released.
UMS tracks the installed products as Asset records that art related to the Account. Sales management has asked the administrator
to create a report for users.
What is the recommended method for the administrator to meet the requirement?

- A. Use PREVGROUPVAL() in Report Builder.
- B. Use a Summary report with Bucket Columns.
- C. Use Role Hierarchy filter to restrict related records.
- D. Use a Cross Filter with WITHOUT logic.

Answer: D

Explanation:
A cross filter with WITHOUT logic is a method for creating a report that shows accounts that are missing certain related records. A
cross filter is a filter that lets you include or exclude records in your report based on related objects and their fields. You can use
cross filters to create reports on accounts with or without opportunities, contacts, cases, or other related objects. In this case, you
can use a cross filter with WITHOUT logic to show accounts without assets that have a certain product name or code. This way,
you can identify customers that need to install a new solar panel monitor system. References: https://help.salesforce.com/s
