## Oracle Financial Consolidation and Close 2024 Implementation Professional Sample Questions (Q104-Q109):

### NEW QUESTION # 104

Which statement explains why, in the Consolidation dimension, the data for an entity in the FCCS\_Entity Input member might be different from the data in the FCCS\_Proportion member?

- A. The parent entity has a different currency than the child.
- B. An intercompany elimination was performed.
- C. A rate was entered into the FCCS Rate Override account.
- D. An ownership percentage for the entity other than 100 was entered.

**Answer: D**

Explanation:

The statement that explains why, in the Consolidation dimension, the data for an entity in the FCCS\_Entity Input member might be different from the data in the FCCS\_Proportion member is: An ownership percentage for the entity other than 100 was entered. This means that the entity is not fully owned by its parent, and therefore its data is adjusted by the ownership percentage when it is consolidated. The FCCS\_Entity Input member shows the data before consolidation, while the FCCS\_Proportion member shows the data after applying the ownership percentage. The other options do not explain why the data might be different. A rate entered into the FCCS Rate Override account affects the currency translation, not the consolidation. The parent entity having a different currency than the child also affects the currency translation, not the consolidation. An intercompany elimination is performed after consolidation, not before, and it affects the FCCS\_Eliminations member, not the FCCS\_Proportion member.
