Fortinet FCP_FGT_AD-7.6 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Content inspection: This section of the exam measures the skills of network security engineers and covers the setup and management of content inspection features on FortiGate. Candidates must demonstrate an understanding of encrypted traffic inspection using digital certificates, identify and apply FortiGate inspection modes, and configure web filtering policies. The ability to implement application control for monitoring and regulating network application usage, configure antivirus profiles to detect and block malware, and set up Intrusion Prevention Systems (IPS) to shield the network from threats and vulnerabilities is also assessed.
Topic 2	<ul style="list-style-type: none"> Firewall policies and authentication: This section of the exam measures the skills of firewall administrators and covers the implementation and management of security policies. It involves configuring basic and advanced firewall rules, applying Source NAT (SNAT) and Destination NAT (DNAT) options, and enforcing various firewall authentication methods. The section also includes deploying and configuring Fortinet Single Sign-On (FSSO) to streamline user access across the network.
Topic 3	<ul style="list-style-type: none"> VPN: This section of the exam measures the skills of network security engineers and covers the configuration and deployment of Virtual Private Network (VPN) solutions. Candidates are required to implement SSL VPNs to grant secure remote access to internal resources and configure IPsec VPNs in either meshed or partially redundant topologies to ensure encrypted communication between distributed network locations.
Topic 4	<ul style="list-style-type: none"> Routing: This section of the exam measures the skills of firewall administrators and covers the configuration of routing features on FortiGate devices. It includes defining and applying static routes for directing traffic within and outside the network, as well as setting up Software-Defined WAN (SD-WAN) to distribute and balance traffic loads across multiple WAN connections efficiently.

Topic 5	<ul style="list-style-type: none"> • Deployment and system configuration: This section of the exam measures the skills of network security engineers and covers essential tasks for setting up a FortiGate device in a production environment. Candidates are expected to perform the initial configuration, establish basic connectivity, and integrate the device within the Fortinet Security Fabric. They must also be able to configure a FortiGate Cluster Protocol (FGCP) high availability setup and troubleshoot resource and connectivity issues to ensure system readiness and network uptime.

Fortinet FCP - FortiGate 7.6 Administrator Sample Questions (Q15-Q20):

NEW QUESTION # 15

A network administrator has enabled full SSL inspection and web filtering on FortiGate. When visiting any HTTPS websites, the browser reports certificate warning errors. When visiting HTTP websites, the browser does not report errors.

What is the reason for the certificate warning errors?

- A. The certificate used by FortiGate for SSL inspection does not contain the required certificate extensions.
- **B. The browser does not trust the certificate used by FortiGate for SSL inspection.**
- C. The option invalid SSL certificates is set to allow on the SSL/SSH inspection profile
- D. The matching firewall policy is set to proxy inspection mode.

Answer: B

Explanation:

When full SSL inspection is enabled, FortiGate decrypts and re-signs HTTPS traffic using its own SSL inspection certificate. If the FortiGate CA certificate is not imported and trusted by the client's browser or OS, the browser sees it as untrusted and displays certificate warning errors. HTTP traffic is unaffected since it does not use certificates.

NEW QUESTION # 16

You have configured the below commands on a FortiGate.

```
config system settings
set strict-src-check enable
end
```

```
Config system interface
edit port1
set src-check disable
next
end
```

What would be the impact of this configuration on FortiGate?

- A. Port1 will be enabled with flexible RPF, and all other interfaces will be enabled for strict RPF
- B. FortiGate will enable strict RPF on all its interfaces and port1 will be enable for asymmetric routing.
- C. The global configuration will take precedence and FortiGate will enable strict RPF on all interfaces.
- **D. FortiGate will enable strict RPF on all its interfaces and port1 will be exempted from RPF checks.**

Answer: D

Explanation:

The global setting enables strict source checking (RPF) on all interfaces by default. The per-interface setting disables the source check on port1, exempting it from strict RPF enforcement.

NEW QUESTION # 17

Refer to the exhibits.

An administrator configured the Web Filter Profile to block access to all social networking sites except Facebook. However, when users try to access Facebook.com, they are redirected to a FortiGuard web filtering block page.

Based on the exhibits, which configuration change must the administrator make to allow Facebook while blocking all other social networking sites?

- A. Change the Feature set of Web Filter Profile as Proxy-based.
- B. Set the Social Networking action as warning in the FortiGuard Category Based Filter.
- C. Set the Action as Exempt for www.facebook.com in the Static URL Filter.
- D. Change the type as Simple in the Static URL Filter section.

Answer: C

NEW QUESTION # 18

A network administrator enabled antivirus and selected an SSL inspection profile on a firewall policy. When downloading an EICAR test file through HTTP, FortiGate detects the virus and blocks the file. When downloading the same file through HTTPS, FortiGate does not detect the virus and does not block the file, allowing it to be downloaded.

The administrator confirms that the traffic matches the configured firewall policy. What are two reasons for the failed virus detection by FortiGate? (Choose two.)

- A. The website is exempted from SSL inspection.
- B. The browser does not trust the FortiGate self-signed CA certificate.
- C. The EICAR test file exceeds the protocol options oversize limit.
- D. The selected SSL inspection profile has certificate inspection enabled.

Answer: A,B

NEW QUESTION # 19

Which inspection mode does FortiGate use for application profiles if it is configured as a profile-based next-generation firewall (NGFW)?

- A. Certificate inspection
- B. Full content inspection
- C. Proxy-based inspection

- D. Flow-based inspection

Answer: C

Explanation:

When FortiGate operates in profile-based NGFW mode, it supports both flow-based and proxy-based inspection for security profiles. However, application profiles (such as Application Control, Web Filter, and Antivirus) are inspected using proxy-based inspection by default in profile-based mode, as this mode allows FortiGate to fully analyze and enforce policies on the application content layer.
