500-220 Reliable Exam Labs - Valid Dumps 500-220 Files

One of the best ways to prepare for the Cisco 500-220 exam is to study the Engineering Cisco Meraki Solutions (500-220) exam questions. Familiarizing yourself with the 500-220 certification using practice test on real-world data sets can help you build your confidence and prepare you for the exam. Additionally, taking 500-220 Exam Questions and quizzes can help you identify areas where you need to improve and gauge your understanding of the material.

Cisco Engineering Cisco Meraki Solutions Sample Questions (Q41-Q46):

NEW QUESTION # 41

Which API endpoint clones a new Organization?

- A. **POST /organizations/{organizationId}/new**
- B. PUT /organizations/{organizationId}/clone
- C. POST /organizations/clone/{organizationId}
- D. POST /organizations/{organizationId}/clone

Answer: A

NEW QUESTION # 42

Refer to the exhibit.

For an AP that displays this alert, which network access control method must be in use?

- A. WPA2-enterprise with my RADIUS server
- B. **preshaed key**
- C. MAC-based access control with RADIUS server
- D. splash page with my RADIUS server

Answer: B

NEW QUESTION # 43

Refer to the exhibit.

Which two actions are required to optimize load balancing asymmetrically with a 4:1 ratio between links? (Choose two.)

- A. Change the primary uplink to "none".
- B. **Enable load balancing.**
- C. Add an internet traffic preference that defines the load-balancing ratio as 4:1.
- D. **Change the assigned speeds of WAN 1 and WAN 2 so that the ratio is 4:1.**
- E. Set the speed of the cellular uplink to zero.

Answer: B,D

Explanation:

Explanation

To clarify, to optimize load balancing asymmetrically with a 4:1 ratio between links, two actions that are required are:

Enable load balancing: This option allows the MX to use both of its uplinks for load balancing. When load balancing is enabled under Security & SD-WAN > Configure > SD-WAN & Traffic shaping, traffic flows will be distributed between the two uplinks proportional to the WAN 1 and WAN 2 bandwidths specified under Uplink configuration1.

Change the assigned speeds of WAN 1 and WAN 2 so that the ratio is 4:1: The assigned speed of a WAN link is a value that indicates the bandwidth available on that link. By changing the assigned speeds of WAN 1 and WAN 2 so that they reflect the desired load-balancing ratio, the administrator can ensure that the MX uses both links efficiently and proportionally1. For example, if WAN 1 has a bandwidth of 100 Mbps and WAN 2 has a bandwidth of 25 Mbps, then setting their assigned speeds to 100 Mbps and 25 Mbps respectively will achieve a 4:1 load-balancing ratio.

NEW QUESTION # 44

A Cisco Meraki MV camera is monitoring an office and its field of vision currently captures work desks and employee computer screens. However, recording employee computer screens is prohibited by local regulation.

Which feature in Dashboard can be used to preserve the current position of the camera while also meeting regulation requirements?

- A. privacy window
- **B. restricted mode**
- C. area or interest
- D. zone exclusion
- E. sensor crop

Answer: B

NEW QUESTION # 45

What is a feature of distributed Layer 3 roaming?

- A. All wireless client traffic can be split-tunneled.
- B. All wireless client traffic is tunneled.
- C. An MX Security Appliance is not required as a concentrator.
- D. An MX Security Appliance is required as a concentrator.

Answer: C

Explanation:

Explanation

https://documentation.meraki.com/Architectures_and_Best_Practices/Cisco_Meraki_Best_Practice_Design/Best This is a feature of distributed Layer 3 roaming, which maintains layer 3 connections for end devices as they roam across layer 3 boundaries without a concentrator¹. The first access point that a device connects to will become the anchor access point¹.
