Microsoft AZ-400 Latest Test Braindumps - AZ-400 Valid Vce Dumps

We know that once we sell fake products to customers, we will be knocked out by the market. So we strongly hold the belief that the quality of the AZ-400 practice materials is our lifeline. When you begin practicing our AZ-400 study materials, you will find that every detail of our AZ-400 study questions is wonderful. Because that we have considered every detail on the developing the exam braindumps, not only on the designs of the content but also on the displays.

Microsoft Designing and Implementing Microsoft DevOps Solutions Sample Questions (Q49-Q54):

NEW QUESTION # 49

Your company uses Azure DevOps for Get source control.

You have a project in Azure DevOps named Contoso App that contains the following repositories:

<https://dev.azure.com/contoso/contoso-app/core-api>

<https://dev.azure.com/contoso/contoso-app/core-spa>

<https://dev.azure.com/contoso/contoso-app/core-db>

You need to ensure that developers receive Slack notifications when there are pull requests created for Contoso App.

What should you run in Slack? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: subscribe

To start monitoring all Get repositories in a project, use the following slash command inside a channel:

/azrepos subscribe [project url]

Box 2: https://dev.azure.com/contoso/contoso-app

You can also monitor a specific repository using the following command:

/azrepos subscribe [repository url]

The repository URL can be to any page within your repository that has your repository name.

For example, for Get repositories, use:

/azrepos subscribe https://dev.azure.com/myorg/myproject/_git/myrepository Reference:

NEW QUESTION # 50

You have a web app that connects to an Azure SQL Database named db1.

You need to configure db1 to send Query Store runtime statistics to Azure Log Analytics.

To complete this task, sign in to the Microsoft Azure portal.

Answer:

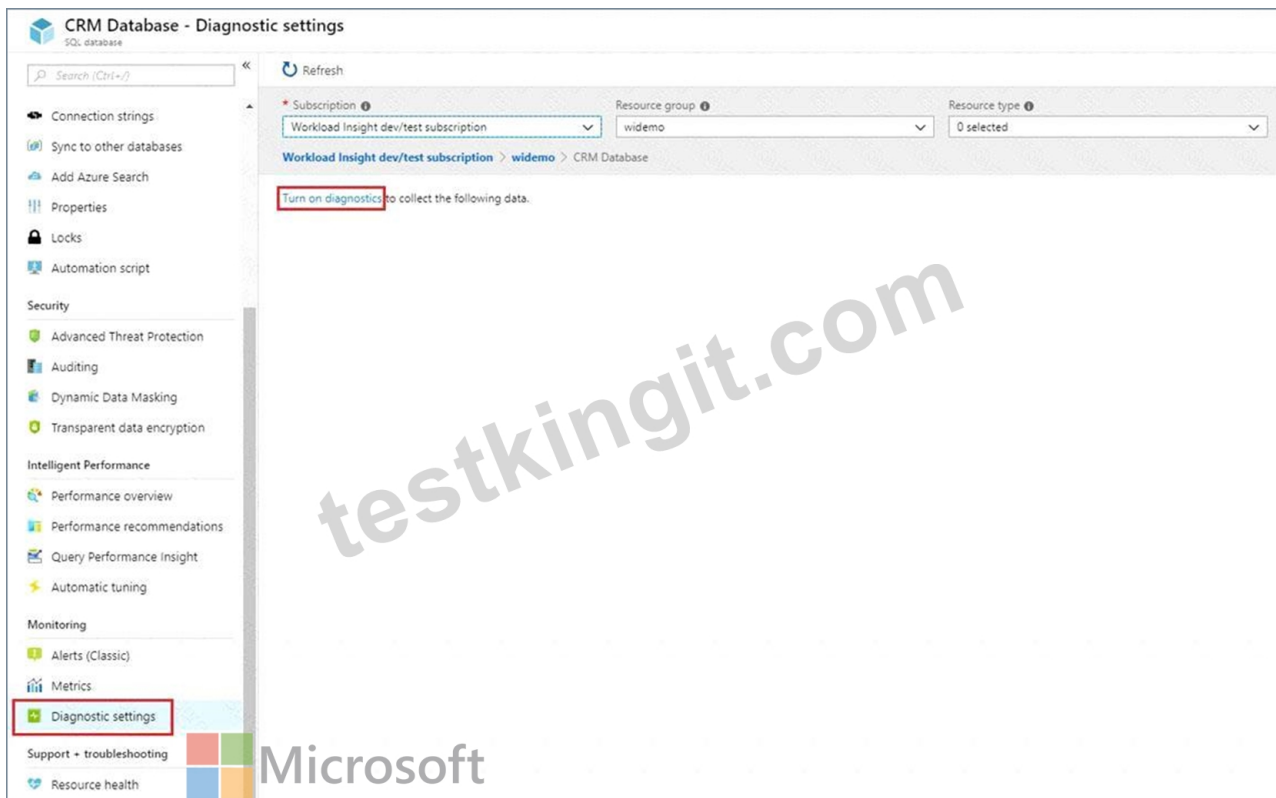

Explanation:

See solution below.

Explanation

To enable streaming of diagnostic telemetry for a single or a pooled database, follow these steps:

1. Go to Azure SQL database resource.
2. Select Diagnostics settings.
3. Select Turn on diagnostics if no previous settings exist, or select Edit setting to edit a previous setting. You can create up to three parallel connections to stream diagnostic telemetry.
4. Select Add diagnostic setting to configure parallel streaming of diagnostics data to multiple resources.

5. Enter a setting name for your own reference.
6. Select a destination resource for the streaming diagnostics data: Archive to storage account, Stream to an event hub, or Send to Log Analytics.
7. For the standard, event-based monitoring experience, select the following check boxes for database diagnostics log telemetry: QueryStoreRuntimeStatistics

Diagnostics settings

Save Discard Delete

* Name

service

☐ Archive to a storage account

☐ Stream to an event hub

☒ Send to Log Analytics

Subscription

Workload Insight dev/test subscription

Log Analytics Workspace

NEW QUESTION # 51

You are developing a multi-tier application. The application will use Azure App Service web apps as the front end and an Azure SQL database as the back end. The application will use Azure functions to write some data to Azure Storage. You need to send the Azure DevOps team an email message when the front end fails to return a status code of 200.

Which feature should you use?

- A. Profiler in Azure Application Insights
- **B. Application Map in Azure Application Insights**
- C. Service Map in Azure Log Analytics
- D. Availability tests in Azure Application Insights

Answer: B

Explanation:

Application Map helps you spot performance bottlenecks or failure hotspots across all components of your distributed application. Each node on the map represents an application component or its dependencies; and has health KPI and alerts status.

Incorrect Answers:

A: Service Map automatically discovers application components on Windows and Linux systems and maps the communication between services. You can use it to view your servers as you think of them--interconnected systems that deliver critical services. Service Map shows connections between servers, processes, and ports across any TCP-connected architecture with no configuration required, other than installation of an agent.

NEW QUESTION # 52

Your company uses Service Now for incident management.

You develop an application that runs on Azure.

The company needs to generate a ticket in Service Now when the application fails to authenticate.

Which Azure Log Analytics solution should you use?

- **A. IT Service Management Connector (ITSM)**
- B. Application Insights Connector
- C. Automation & Control
- D. Insights & Analytics

Answer: A

Explanation:

Explanation

The IT Service Management Connector (ITSMC) allows you to connect Azure and a supported IT Service Management (ITSM) product/service.

ITSMC supports connections with the following ITSM tools:

- * ServiceNow
- * System Center Service Manager
- * Provanex
- * Cherwell

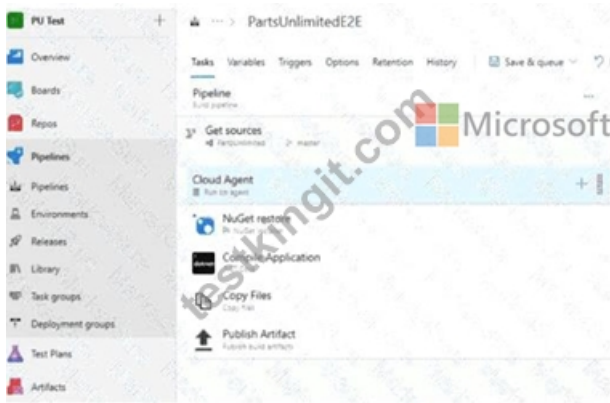

With ITSMC, you can

- * Create work items in ITSM tool, based on your Azure alerts (metric alerts, Activity Log alerts and Log Analytics alerts).
- * Optionally, you can sync your incident and change request data from your ITSM tool to an Azure Log Analytics workspace.

NEW QUESTION # 53

You have the Azure DevOps pipeline shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

Answer Area

The pipeline has job(s).

The pipeline has task(s).

Answer:

Explanation:

Answer Area

The pipeline has job(s).

The pipeline has task(s).

Explanation:

Answer Area

The pipeline has job(s).

The pipeline has task(s).

Box 1: 1

The Cloud agent job only.

Box 2: 4

The pipelines has the four tasks: NuGetrestore, Compile Application, Copy Files, and Publish Artifact.
