Tableau Certified Data Analyst Sample Questions (Q128-Q133):

NEW QUESTION # 128
You have the following map.

You need the map to appear as shown in the following visualization.
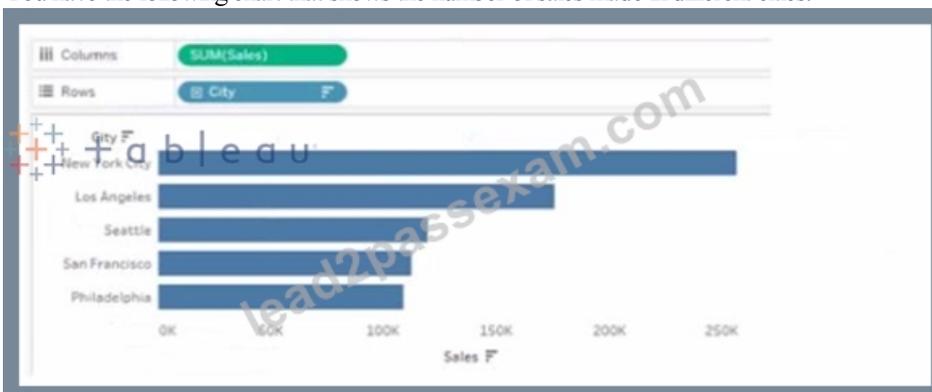

What should you do?

- A. Change the mark type to Map
- B. Change the opacity to 75%
- C. Drag Location to Size on the Marks card
- D. Drag Population to Size on the Marks card
- E. Change the mark type to Density

Answer: E

NEW QUESTION # 129
You have a database that includes field named sales, City and Region.
You have the following chart that shows the number of sales made in different cities.

You want to dynamically show the corresponding region when users hover their mouse over any of the bars.
What should you do?

- A. Edit the aliases for City.
- B. Right-click a in the chat, select Annotate and then select Mark.
- C. Drag Region to Tooltip on the Marks card
- D. Right-click a bar in the chart select Mark Label and then select Always show.
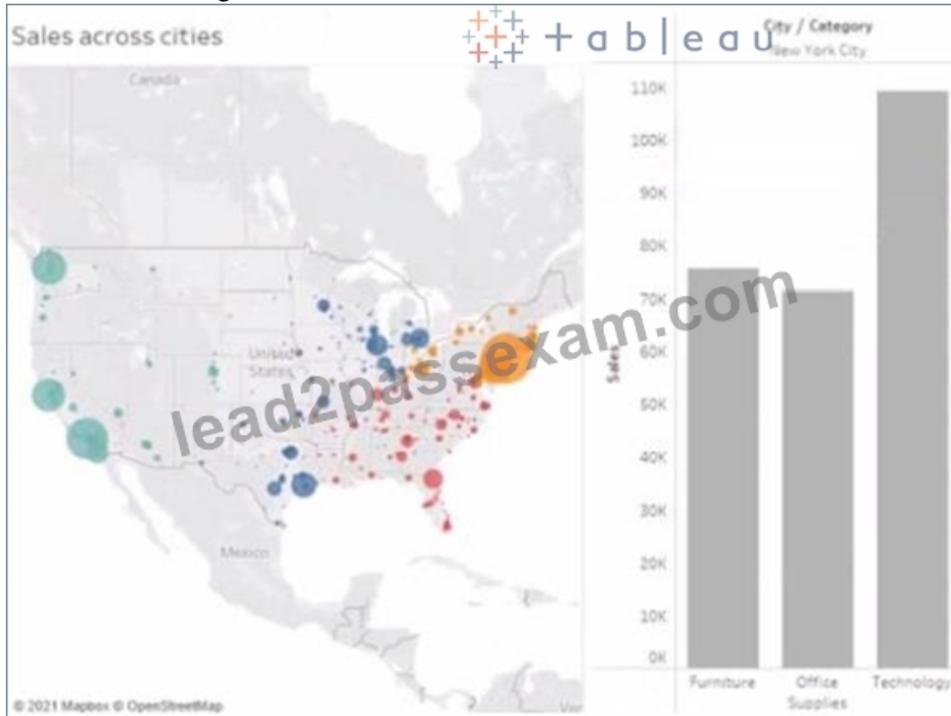

Answer: C

Explanation:
To show the corresponding region when users hover their mouse over any of the bars, you need to drag Region to Tooltip on the Marks card. This will add Region as a field in the tooltip text that appears when users hover over a mark. You can also customize the tooltip text by editing it in the Tooltip dialog box. NEW QUESTION # 130
You have the following dashboard.

When a user selects a only on the map the data on the bar chart must show only the data for the selected city.
The data in the bar chart must change only when the user selects a different city How should you configure the dashboard action?
(Use the dropdowns in the Answers Area to select the correct options.)

Answer:

Explanation:

Explanation:
To configure the dashboard action, you should select Filter as the action type, Select as the run action on option, and All Fields as

the target filters option. This will ensure that when a user selects a city on the map, the bar chart will show only the data for the selected city based on all fields in common between the two worksheets. The action will run only when the user selects a different city. References:

NEW QUESTION # 131

The following table displays the row-level data in a Tableau data source:

Order ID	Item	Sales
1	A	20
1	C	10
2	B	15
3	A	40
4	D	30

A Data Analyst creates this calculated field:
SUM(IF [Item] = 'A' THEN [Sales] END) / COUNT([Order ID])
What is the result of this aggregate calculation?

- A. 0
- B. 1
- C. An error
- D. 2

Answer: D

NEW QUESTION # 132

You have the following dataset
You need to create the following visualization.

Which quick table calculation should you drag to Text on the Marks card?

- A. Percentile
- B. Compound Growth Rate
- C. Percent of Total
- D. Percent Difference

Answer: C

Explanation:
we need to create a quick table calculation that shows the percent of total sales for each category and sub- category. To do this, we can follow these steps:
* Drag Category to Columns and Sub-Category to Rows.
* Drag Sales to Text on the Marks card.
* Right-click Sales on the Marks card and select Quick Table Calculation > Percent of Total.
* Right-click Sales on the Marks card again and select Compute Using > Category.
This will create a quick table calculation that shows the percent of total sales for each sub-category within each category. The visualization will look like this:

NEW QUESTION # 133
......
