Latest Braindumps DEP-2025 Book - New DEP-2025 Braindumps Files

We talked with a lot of users about our DEP-2025 practice engine, so we are very clear what you want. For the needs of users, our DEP-2025 exam braindumps are constantly improving. You know that the users of our DEP-2025 training materials come from all

over the world. And our DEP-2025 Exam Questions are easy to be understood. For our professional experts have simplified the content and language of the DEP-2025 preparation quiz, so it is global.

Apple Deployment and Management Exam Sample Questions (Q219-Q224):

NEW QUESTION # 219

Which type of Apple ID should an organization create for its employees to separate personal and work data?

- A. Personal Apple ID
- **B. Managed Apple ID**
- C. Shared Apple ID
- D. Apple ID

Answer: B

Explanation:

Managed Apple IDs are created by organizations via Apple Business Manager or Apple School Manager to provide employees or students with accounts that separate personal and work/school data. Unlike personal Apple IDs (options A and C, which are the same), Managed Apple IDs are controlled by the organization, restricting certain features (e.g., iCloud backups) to maintain data separation. Shared Apple IDs (option D) don't exist as a formal type; Shared iPad uses temporary sessions, not IDs. The Apple Platform Deployment Guide recommends Managed Apple IDs for organizational use.

Reference: Apple Platform Deployment Guide (Chapter: Managed Apple IDs).

NEW QUESTION # 220

What happens if your Automated Device Enrollment profile is configured to skip the creation of a local macOS account?

- **A. The user logs in using a network account or another account created outside of Setup Assistant**
- B. The user's Managed Apple Account is used as a local account
- C. The setup process fails
- D. The user is notified their Mac is partially set up, and they must erase and start again

Answer: A

Explanation:

Skipping local account creation requires alternative login. The macOS Deployment Reference states, "If ADE skips local account creation, users must log in with a network account or another pre-existing account created outside Setup Assistant." Option C is incorrect as Managed Apple IDs don't become local accounts.

Reference:

macOS Deployment Reference, "ADE Configuration" section.

Apple Platform Deployment Guide, "Account Setup" section.

NEW QUESTION # 221

You configured MDM to enforce a minimum operating system version during enrollment. What happens when a device that doesn't meet this requirement tries to enroll using Automated Device Enrollment?

- A. The device enrolls and allows the update to be deferred up to seven days.
- B. The device updates after completing Setup Assistant.
- C. The device doesn't enroll.
- **D. The device updates and resumes Setup Assistant automatically.**

Answer: D

Explanation:

Apple's Automated Device Enrollment supports a minimum OS requirement setting in MDM. If a device attempts enrollment but does not meet this OS version, Setup Assistant automatically pauses and prompts the device to update. The update is applied immediately, and once complete, the device continues enrollment and resumes Setup Assistant from where it left off. Apple Learning emphasizes this ensures that devices are compliant from the start, reducing post-enrollment remediation. Users cannot bypass or defer the update. This workflow helps organizations maintain consistency across fleets, ensuring all devices meet baseline security and app compatibility requirements before proceeding.

References:Apple Platform Deployment - "Require a minimum OS version during Automated Device Enrollment."

NEW QUESTION # 222

How do you enroll devices ineligible for automatic enrollment in Apple Business Manager or Apple School Manager?

- A. No enrollment possible
- **B. Device Enrollment**
- C. Automatic enrollment
- D. Automated Device Enrollment

Answer: B

Explanation:

Devices ineligible for Automated Device Enrollment (ADE) in Apple Business Manager (ABM) or Apple School Manager (ASM)- typically because they weren't purchased directly from Apple or an authorized reseller-can still be enrolled manually via Device Enrollment. This involves installing an enrollment profile locally on the device, often using tools like Apple Configurator. Automated Device Enrollment (option B) and Automatic enrollment (option C) refer to ADE, which isn't applicable here. "No enrollment possible" (option D) is incorrect, as manual enrollment is an option. TheApple Platform Deployment Guideoutlines Device Enrollment for such cases.

Reference:Apple Platform Deployment Guide(Chapter: Device Enrollment).

NEW QUESTION # 223

What can be used to report state changes without requiring MDM device polling?

- A. Device supervision status
- B. Network relay
- C. Automated Device Enrollment
- **D. Declarative device management**

Answer: D

Explanation:

Declarative Device Management (DDM) reports changes proactively. The Mobile Device Management Protocol Reference states, "Declarative Device Management enables devices to report state changes to MDM without polling, improving efficiency." Reference: Mobile Device Management Protocol Reference, "Declarative Management" section.

Apple Platform Deployment Guide, "DDM Overview" section.

NEW QUESTION # 224

.....

As the saying goes, to develop study interest requires to giving learner a good key for study, this is promoting learner active development of internal factors.
