Real Salesforce Analytics-Admn-201 Exam Questions in PDF Format

DOWNLOAD the newest ITPassLeader Analytics-Admn-201 PDF dumps from Cloud Storage for free:
https://drive.google.com/open?id=1n0jzupE2_rMj3C2flgALkdtdYcivUuxQ

In today's technological world, more and more students are taking the Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) exam online. While this can be a convenient way to take a Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) exam dumps, it can also be stressful. Luckily, ITPassLeader's best Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) exam questions can help you prepare for your Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) certification exam and reduce your stress. If you are preparing for the Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) exam dumps our Analytics-Admn-201 Questions help you to get high scores in your Analytics-Admn-201 exam.

The Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) certification is a valuable credential that every Salesforce professional should earn it. The Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) certification exam offers a great opportunity for beginners and experienced professionals to demonstrate their expertise. With the Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) certification exam everyone can upgrade their skills and knowledge. There are other several benefits that the Salesforce Analytics-Admn-201 exam holders can achieve after the success of the Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) certification exam.

Pass Guaranteed Quiz 2026 Salesforce Latest Exam Analytics-Admn-201 Course

First and foremost, our company has prepared Analytics-Admn-201 free demo in this website for our customers. Second, it is convenient for you to read and make notes with our PDF version. Last but not least, we will provide considerate on line after sale service for you in twenty four hours a day, seven days a week. So let our Analytics-Admn-201 practice materials to be your learning partner in the course of preparing for the exam, especially the PDF version is really a wise choice for you.

Salesforce Analytics-Admn-201 Exam Syllabus Topics:

Topic	Details
Topic 1	• Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.

Topic 2	• Migration & Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.
Topic 3	• Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.
Topic 4	• Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.
Topic 5	• Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.

Salesforce Certified Tableau Server Administrator Sample Questions (Q20-Q25):

NEW QUESTION # 20
What are two intervals when Tableau Server verifies if data conditions for data-driven alerts are true? (Choose two.)

- A. Whenever a new extract is published
- B. Whenever extracts in the related workbook are refreshed
- C. Every 10 minutes
- D. Every 60 minutes

Answer: B,D

Explanation:
Data-driven alerts notify users when data meets conditions (e.g., sales > $10K). Let's examine when Tableau checks these:
* Alert Mechanics:
* Enabled per site (Settings > General > Data-Driven Alerts).
* Backgrounder evaluates conditions against extract data.
* Check Intervals: Configurable via tsm configuration set -k dataAlerts.checkIntervalInMinutes (default: 60 minutes).
* Refresh Trigger: Also checks post-extract refresh for immediate updates.
* Option A (Every 60 minutes): Correct.
* Details: Default interval-Backgrounder polls every hour to evaluate alert conditions.
* Config: Adjustable (e.g., -v 30 for 30 minutes).
* Option D (Whenever extracts in the related workbook are refreshed): Correct.
* Details: An extract refresh updates the data, triggering an immediate alert check to catch changes promptly.
* Why: Ensures timely notifications without waiting for the next poll.
* Option B (Every 10 minutes): Incorrect.
* Why: Not the default-possible via config, but not standard.
* Option C (Whenever a new extract is published): Incorrect.
* Why: Publishing creates the extract; alerts trigger on refreshes or polling, not initial publication.
Why This Matters: Timing affects alert responsiveness-balancing frequency and server load is key.
Reference: Tableau Server Documentation - "Data-Driven Alerts" (https://help.tableau.com/current/server/en- us/data_alerts.htm).

NEW QUESTION # 21

What two Tableau Services Manager (TSM) processes continue to run when Tableau Server is stopped?
(Choose two.)

- **A. License Manager**
- **B. Administration Controller**
- C. Backgrounder
- D. VizQL Server

Answer: A,B

Explanation:
Tableau Server consists of multiple processes managed by TSM. When you stop Tableau Server (e.g., via tsm stop), most application processes halt, but some TSM-specific processes remain active to manage the server's infrastructure. Let's examine each:
* TSM Processes: These include the Administration Controller, Administration Agent, and License Manager, which handle configuration, monitoring, and licensing.
* Application Processes: These include VizQL Server, Backgrounder, Data Server, etc., which deliver Tableau's core functionality and stop when the server is stopped.
When tsm stop is executed:
* The Administration Controller (port 8850) continues running to manage TSM operations (e.g., restarts, status checks).
* The License Manager remains active to validate licenses and ensure compliance, even when the server is offline.
* Application processes like VizQL Server and Backgrounder shut down, as they're tied to user-facing services.
* Option B (License Manager): Correct. It persists to handle licensing tasks, ensuring the server can restart without license issues.
* Option D (Administration Controller): Correct. It's the core TSM process, always running to accept commands and manage the server state.
* Option A (VizQL Server): Incorrect. VizQL stops, as it renders visualizations for users-an application process tied to active server operation.
* Option C (Backgrounder): Incorrect. Backgrounder stops, as it processes background tasks (e.g., extract refreshes), which halt when the server is down.
Why This Matters: Understanding which processes persist helps administrators troubleshoot and manage server lifecycle events effectively.
Reference: Tableau Server Documentation - "TSM Processes" (https://help.tableau.com/current/server/en-us/tsm_overview.htm#processes).

NEW QUESTION # 22

A new engineer reports that he is unable to log on to Tableau Services Manager (TSM) from the initial node of a Windows test cluster. Which account credentials should you instruct the engineer to use?

- A. An account with a Creator site role
- B. An account for the Tableau Server administrator
- C. An account with a Site Administrator role
- **D. An account with administrative rights to the computer**

Answer: D

Explanation:
Tableau Services Manager (TSM) is the administrative tool for managing Tableau Server's configuration, processes, and topology.
To log in to TSM (via the web UI at https://<server>:8850 or CLI), you need:
* TSM administrator credentials: These are distinct from site roles and are set during installation or reset via tsm reset.
* Local administrative rights: On Windows, the account used to access TSM must be in the local Administrators group on the initial node, as TSM interacts with system-level services.
In a test cluster, the engineer's inability to log in suggests they lack either the correct TSM credentials or sufficient OS-level permissions. Since the question focuses on a Windows environment and "initial node," the most immediate requirement is local administrative rights to run TSM commands or access the UI.
* Option C (An account with administrative rights to the computer): Correct. The engineer must use an account in the local Administrators group on the initial node to authenticate to TSM. After that, they'll need the TSM admin username/password set during installation.
* Option A (An account with a Creator site role): Incorrect. Site roles (e.g., Creator) apply to content access within Tableau Server, not TSM administration.

* Option B (An account with a Site Administrator role): Incorrect. Site Administrators manage site content, not server-level TSM functions.
* Option D (An account for the Tableau Server administrator): Partially correct but incomplete. This likely refers to the TSM admin account, but without local admin rights on the machine, login will fail.
Option C is more precise.
Reference: Tableau Server Documentation - "TSM Authentication" (https://help.tableau.com/current/server /en-us/tsm_overview.htm#authentication).

NEW QUESTION # 23
You need to ensure that Tableau Server requires the setup of a new administrator account the next time you attempt to log in. What should you do?

- A. Reinstall Tableau Server
- B. Edit tabsvc.yml
- C. Run the tsm register command
- D. Run the tsm reset command

Answer: D

Explanation:
To force Tableau Server to require the setup of a new administrator account (e.g., resetting the server to an initial setup state), the tsm reset command is the appropriate tool. This command resets Tableau Server's administrative configuration, including the TSM administrator account, while preserving content like workbooks and data sources.
Option B (Run the tsm reset command): Correct. Running tsm reset clears the current TSM administrator credentials and configuration settings. The next time you access TSM (e.g., via the web interface or CLI), it prompts you to set up a new administrator account, mimicking the initial setup process. Command: tsm reset -- username <new-username> --password <new-password>.
Option A (Edit tabsvc.yml): Incorrect. The tabsvc.yml file contains service configuration data, but manually editing it is not supported or recommended for resetting the administrator account. It could also corrupt the installation.
Option C (Run the tsm register command): Incorrect. The tsm register command is used to register Tableau Server with a new product key or identity store, not to reset the administrator account.
Option D (Reinstall Tableau Server): Incorrect. Reinstallation wipes the entire server, including content, and is overkill for this task. The tsm reset command achieves the goal without data loss.
Reference: Tableau Server Documentation - "TSM Reset Command" (https://help.tableau.com/current/server /en-us/cli_reset.htm).

NEW QUESTION # 24
What file format should you use to register Tableau Server from the command line?

- A. YML
- B. JSON
- C. XML
- D. HTTP

Answer: B

Explanation:
Registering Tableau Server from the command line involves providing configuration details (e.g., identity store, license) via the tsm register command. Let's explore this fully:
* Registration Process:
* Run during initial setup or to update settings (e.g., after changing AD/LDAP config).
* Uses a configuration file to pass parameters to TSM.
* Command: tsm register --file <path-to-file>.
* File Format:
* Tableau Server uses JSON for configuration files in TSM commands like tsm register.
* Example:
json
CollapseWrapCopy
{

"identityStore": {
"type": "local",
"domain": "example.com"
}
}
* JSON is structured, machine-readable, and aligns with Tableau's modern CLI design.
* Option C (JSON): Correct.
* Official format for tsm register, per documentation and practical use.
* Option A (YML): Incorrect.
* While tabsvc.yml exists internally, it's not for registration-tsm register uses JSON.
* Option B (XML): Incorrect.
* Older Tableau configs used XML (e.g., workgroup.yml pre-TSM), but TSM standardized on JSON.
* Option D (HTTP): Incorrect.
* HTTP is a protocol, not a file format-irrelevant here.
Why This Matters: Correct file format ensures seamless registration, avoiding CLI errors in setup or migrations.
Reference: Tableau Server Documentation - "tsm register" (https://help.tableau.com/current/server/en-us/cli_register.htm).

NEW QUESTION # 25
......

It is the dream of every certification candidate to crack the Salesforce Certified Tableau Server Administrator Analytics-Admn-201 examination on the first sitting. Success in the Salesforce Certified Tableau Server Administrator Analytics-Admn-201 exam brings multiple career benefits. You become eligible for high-paying jobs and promotions in your current firm after earning the Salesforce Certified Tableau Server Administrator Analytics-Admn-201 Certification. Since the Salesforce Certified Tableau Server Administrator Analytics-Admn-201 exam registration fee is hefty, therefore, you will not want to fail the Analytics-Admn-201 Exam and pay this fee for the second time.
