With the latest information and knowledge in our Salesforce-Data-Cloud Exam Braindumps, we help numerous of our customers get better job or career with their dreaming Salesforce-Data-Cloud certification.

Salesforce Data Cloud Accredited Professional Exam Sample Questions (Q51-Q56):

NEW QUESTION # 51

A customer is trying to activate data from Data Cloud to an Amazon S3 Cloud File Storage Bucket.

Which authentication type should the consultant recommend to connect to the S3 bucket from Data Cloud?

- A. Use a JWT Token generated on S3.
- B. Use an S3 Encrypted Username and Password.
- C. Use an S3 Private Key Certificate.
- **D. Use an S3 Access Key and Secret Key.**

Answer: D

Explanation:

To use the Amazon S3 Storage Connector in Data Cloud, the consultant needs to provide the S3 bucket name, region, and access key and secret key for authentication. The access key and secret key are generated by AWS and can be managed in the IAM console. The other options are not supported by the S3 Storage Connector or by Data Cloud. NEW QUESTION # 52

What is a unique requirement of a Streaming Insight query?

- A. A WHERE clause
- B. A dimension
- C. A measurement
- **D. A window function**

Answer: D

Explanation:

A window function is a unique requirement of a Streaming Insight query. It defines the time interval for the query to run on the streaming data and the frequency of the query execution. Reference: https://help.salesforce.com/s/articleView?id=sf.c360_a_streaming_insights.htm&type=5

NEW QUESTION # 53

To which Data Model entity should the Email field from a CRM Contact object be mapped?

- A. Account Contact
- **B. Contact Point Email**
- C. Individual
- D. Lead

Answer: B

Explanation:

The Email field from a CRM Contact object should be mapped to the Contact Point Email entity in the Customer 360 data model. This entity represents an email address that is associated with an individual or an account contact. Reference: [Contact Point Email

Entity]

NEW QUESTION # 54

What is a DMO called if it inherits the name, shape, and semantics of the reference object?

- A. Data Lake Object (DLO)
- **B. Standard DMO**
- C. Data Source Object (DSO)
- D. Custom DMO

Answer: B

Explanation:

Explanation

A Data Model Object (DMO) that inherits the name, shape, and semantics of the reference object is called a Standard DMO. A reference object is a predefined object in the Data Cloud data model that represents a common entity or concept, such as Individual, Order, or Product. A Standard DMO is a copy of a reference object that you can use to ingest data from a specific source without modifying the original reference object. A Standard DMO has the same fields and relationships as the reference object, but you can add custom fields or relationships to it if needed. References: Data Model Objects

NEW QUESTION # 55

What does the Ignore Empty Value option do in identity resolution?

- A. Ignores empty fields when running the standard match rules
- **B. Ignores empty fields when running reconciliation rules**
- C. Ignores empty fields when running any custom match rules
- D. Ignores Individual object records with empty fields when running identity resolution rules

Answer: B

Explanation:

The Ignore Empty Value option in identity resolution allows customers to ignore empty fields when running reconciliation rules. Reconciliation rules are used to determine the final value of an attribute for a unified individual profile, based on the values from different sources. The Ignore Empty Value option can be set to true or false for each attribute in a reconciliation rule. If set to true, the reconciliation rule will skip any source that has an empty value for that attribute and move on to the next source in the priority order. If set to false, the reconciliation rule will consider any source that has an empty value for that attribute as a valid source and use it to populate the attribute value for the unified individual profile.

The other options are not correct descriptions of what the Ignore Empty Value option does in identity resolution. The Ignore Empty Value option does not affect the custom match rules or the standard match rules, which are used to identify and link individuals across different sources based on their attributes. The Ignore Empty Value option also does not ignore individual object records with empty fields when running identity resolution rules, as identity resolution rules operate on the attribute level, not the record level.
