NEW QUESTION # 57
A Platform Engineer is deploying an NKP workload cluster using the nkp create cluster vsphere command. The cluster will be utilized by the company's code-green team and the engineer has already created a code-green NKP workspace on the NKP management cluster. After issuing the deploy command, the engineer monitored the build using the nkp describe cluster command and confirmed it completed successfully. However, a few hours later, after logging into the NKP UI, the engineer checked the code-green NKP workspace and saw that the NKP workload cluster was not there.
What is the likely reason the NKP workload cluster is not in the code-green NKP workspace?

- A. NKP vSphere clusters cannot be assigned NKP workspaces and instead are assigned the default NKP workspace. The cluster can be viewed from this workspace instead.
- B. The vSphere cluster cannot be displayed in the NKP UI unless its Kubernetes version is within `N - 1' versions of the NKP management cluster's Kubernetes version.
- C. The vSphere service account credentials had expired prior to the engineer's attempt to view the cluster in the NKP UI. Once the credentials are refreshed, the vSphere cluster will reappear in the NKP workspace.
- D. The engineer did not supply the --namespace code-green parameter as part of the nkp create cluster vsphere command, therefore it was created in the default workspace and needs to be manually attached.
