Reliable AZ-801 Exam Price, New APP AZ-801 Simulations

P.S. Free & New AZ-801 dumps are available on Google Drive shared by BraindumpsVCE: https://drive.google.com/open?id=17jnzgRjw2V4pwuojrSzxjWIBdkS3-3Wr

This cost-effective exam product is made as per the current content of the Microsoft AZ-801 examination. Therefore, using BraindumpsVCE the actual Microsoft AZ-801 dumps will guarantee your successful attempt at the AZ-801 Certification Exam. For the convenience of customers, we have designed AZ-801 pdf dumps, desktop Microsoft AZ-801 practice exam software, and Microsoft AZ-801 web-based practice test.

Microsoft AZ-801 Exam Syllabus Topics:

Section	Weight	Objectives

Topic 1: Implement and manage an on-premises and hybrid server infrastructure	15-20%	- Manage Windows Server virtual machines (VMs) • 1. Create and manage VM snapshots • 2. Implement Azure Automation • 3. Manage VMs with Windows Admin Center • 4. Manage VMs with PowerShell - Manage Windows Server in a hybrid environment • 1. Manage Azure VMs running Windows Server • 2. Implement Azure Arc for servers • 3. Manage Windows Server with PowerShell • 4. Manage Windows Server with Admin Center - Manage and maintain an on-premises and hybrid AD DS infrastructure • 1. Configure AD DS trusts • 2. Implement identity federation • 3. Manage Azure AD DS • 4. Configure and manage Azure AD Connect - Manage Windows Server by using domain-based Group Policies • 1. Implement Group Policy processing • 2. Implement Group Policy settings • 3. Implement Group Policy Preferences
Topic 2: Manage virtual machines and containers	15-20%	- Manage Azure VMs that run Windows Server • 1. Manage Azure VM availability • 2. Manage Azure VMs with Azure CLI • 3. Manage Azure VMs with PowerShell - Create and manage containers • 1. Configure Docker • 2. Manage container storage • 3. Manage container networking - Manage Hyper-V and guest virtual machines • 1. Enable VM enhanced session mode • 2. Manage VM checkpoints • 3. Manage VHD/VHDX • 4. Implement high availability for Hyper-V

Topic 3: Implement and manage on-premises and hybrid high availability solutions	15-20%	- Implement Storage Spaces Direct • 1. Manage Storage Spaces Direct • 2. Implement Storage Replica • 3. Implement cluster sets - Manage and maintain failover clustering • 1. Implement cluster-aware updating • 2. Implement node fairness - Implement high availability and disaster recovery solutions • 1. Implement clustering • 2. Manage failover clustering • 3. Manage Azure Stack HCI • 4. Implement Storage Spaces Direct - Implement failover clustering • 1. Manage failover clusters • 2. Troubleshoot failover clusters • 3. Implement workloads in failover clusters
Topic 4: Implement and manage an on-premises and hybrid disaster recovery solution	10-15%	- Manage backup and recovery for Windows Server • 1. Manage Azure Backup • 2. Implement Azure Site Recovery • 3. Manage Windows Server Backup - Protect workloads by using Hyper-V Replica • 1. Configure Hyper-V Replica • 2. Manage Hyper-V Replica - Implement disaster recovery by using Azure Site Recovery • 1. Perform failover and failback • 2. Configure Azure Site Recovery

Topic 5: Secure Windows Server on-premises and hybrid infrastructures	25-30%	- Secure a hybrid Active Directory (AD) infrastructure • 1. Configure Windows LAPS • 2. Configure password policies • 3. Configure account lockout policies • 4. Implement authentication policies • 5. Implement privileged access management - Secure Windows Server operating system • 1. Implement Credential Guard • 2. Implement Secure Boot, Trusted Platform Module (TPM), and BitLocker • 3. Configure and manage Windows Defender Firewall • 4. Configure and manage exploit protection • 5. Configure and manage Windows Defender Application Control • 6. Configure and manage Microsoft Defender for Endpoint - Secure network infrastructure for hybrid workloads • 1. Manage Windows Server with Admin Center and PowerShell • 2. Implement Azure Network Adapter • 3. Implement DNS Security (DNSSEC) - Identify and remediate Windows Server security issues • 1. Implement Update Management • 2. Monitor Windows Server • 3. Analyze Windows Server event logs

New APP AZ-801 Simulations - Latest AZ-801 Exam Cram

Using AZ-801 exam guide allows you to learn without any obstacles anytime and anywhere. All AZ-801 exam materials in the platform include PDF, PC test engine, and APP test engine three modes. Among them, the PDF version of learning materials is easy to download and print into a paper version for practice and easy to take notes; PC version of AZ-801 training torrent can imitate real test environment and conduct time-limited testing, and the system will automatically score for you after the test; and APP version of AZ-801 exam guide supports any electronic device.

Microsoft Configuring Windows Server Hybrid Advanced Services Sample Questions (Q170-Q175):

NEW QUESTION # 170
You have an on-premises server named Server1 that runs Windows Server, has the Web Server (IIS) server role installed, and hosts an ASP.NET-based web app named App1.
You have an Azure subscription that contains an Azure App Service app and an Azure container registry named ACR1.
You plan to migrate App1 to an App Service container by using Azure Migrate. The container image for App1 will be stored in ACR1.
You need to ensure that the App Containerization tool can store the container for App1 in ACR1. The solution must follow the principle of least privilege.
Which credential should the App Containerization tool use?

- A. a Microsoft Entra service principal
- B. the admin user account of ACR1

- C. a Microsoft Entra user
- D. a managed identity

Answer: A

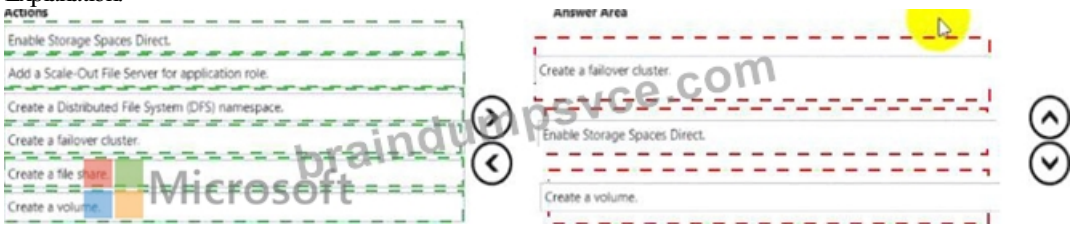

Explanation:
Detailed Explanation
The Azure Migrate App Containerization tool needs an identity with just enough rights to push the built container image into ACR1, and Microsoft ' s guidance for this scenario is to register a Microsoft Entra (Azure AD) application and use its service principal, scoped to an ACR push/pull role such as AcrPush, as the credential the tool authenticates with. This follows least privilege because the service principal can be limited to registry push operations only, unlike the ACR admin user account, which grants full administrative control over the registry, or a Microsoft Entra user account or managed identity, which are either tied to a person or not the mechanism the on-premises containerization tool uses to authenticate to Azure. A scoped service principal is therefore the appropriate credential for the tool.

NEW QUESTION # 171
You need to create a Hyper-V hyper-converged cluster that stores virtual machines by using Storage Spaces Owed Which three actions should you perform in sequence? To answer, move the appropriate anions from the list of actions to the answer area and arrange them in the correct order.

Answer:

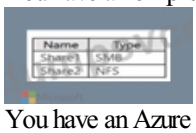

Explanation:

Explanation:

NEW QUESTION # 172
You have an on-premises server named Server1 that runs Windows Server and contains the shares shown in the following table.

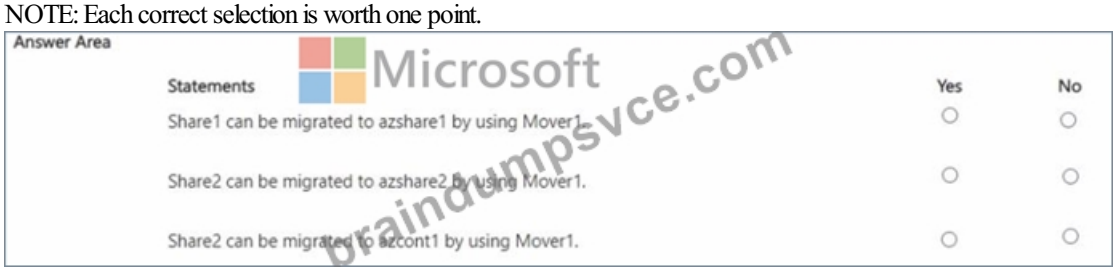

You have an Azure subscription named Sub1 that contains an Azure Storage Mover resource named Mover1 and the storage accounts shown in the following table.

Name	Kind	Performance	Hierarchical namespace
storage1	FileStorage	Premium	*Not applicable*
storage2	StorageV2	Standard	Enabled

The storage accounts contain the resources shown in the following table.

Name	Storage account	Type
azshare1	storage1	File share
azshare2	storage2	File share
azcont1	storage2	Blob container

For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 173
Your network contains an Active Directory Domain Services (AD DS) forest that has a Windows Server 2008 R2 forest functional level. The forest contains the domains shown in the following table.

Name	Operating system of all domain controllers	Domain functional level
contoso.com	Windows Server 2016	Windows Server 2012 R2
east.contoso.com	Windows Server 2019	Windows Server 2016

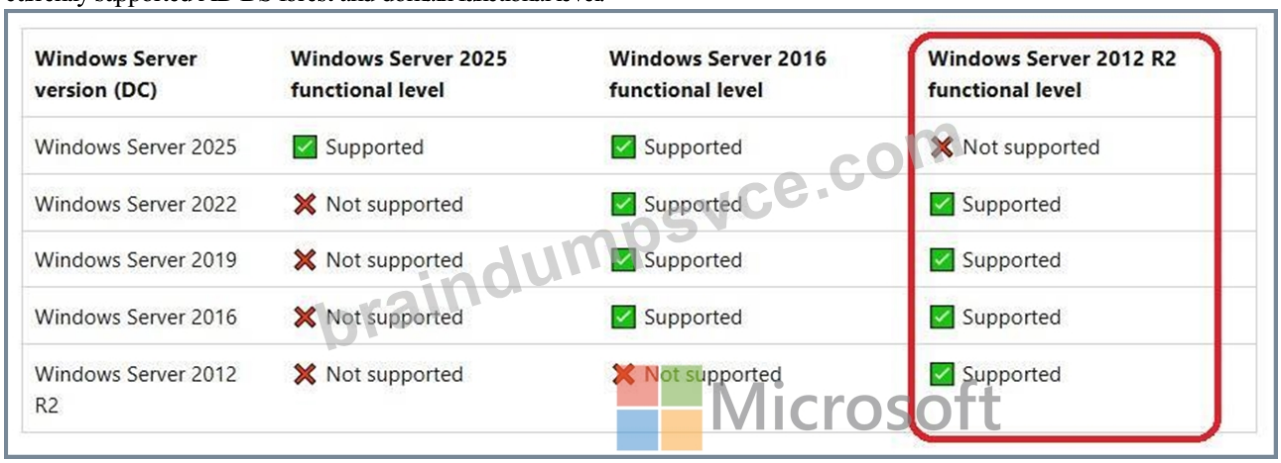

You need to perform an in-place upgrade of the domain controllers in east.contoso.com to Windows Server 2025. The solution must minimize administrative effort.
What should you do first?

- A. Raise the domain functional level of east.contoso.com to Windows Server 2025.
- B. Raise the forest functional level to Windows Server 2025.
- C. Extend the schema.
- D. Raise the domain functional level of contoso.com to Windows Server 2016.

Answer: D

Explanation:
The first step is to raise the forest functional level to Windows Server 2016, and then raise the domain functional level of the east.contoso.com domain to Windows Server 2016. Windows Server 2016 is the most recent functional level, and it supports domain controllers running Windows Server 2025. You must have all domain controllers upgraded to the new operating system before you can raise the functional level.
Upgrade steps
Before you begin
*-> 1. Raise the forest functional level to Windows Server 2016. This can be done using the Active Directory Domains and Trusts console.
2. Raise the domain functional level for east.contoso.com to Windows Server 2025.
Note:

Windows Server functional level interoperability
The following interoperability matrix summarizes which Windows Server versions you can run as domain controllers for each currently supported AD DS forest and domain functional level.

NEW QUESTION # 174
You have an on-premises server that runs Windows Server and has the Web Server (IIS) server role installed. The server hosts a web app that connects to an on-premises Microsoft SQL Server database.
You plan to migrate the web app to an Azure App Services web app. The database will remain on-premises.
You need to ensure that the migrated web app can access the database.
What should you configure in Azure?

- A. Azure Extended Network
- B. an Azure SQL managed instance
- C. a Hybrid Connection
- D. an on-premises data gateway

Answer: C

Explanation:
