The development of society urges us to advance and use our Plat-Arch-201 Study Materials to make us progress faster and become the leader of this era. The best you need is the best exam preparation materials. Our Plat-Arch-201 exam simulation will accompany you to a better future.

## Salesforce Certified Platform Data Architect Sample Questions (Q253-Q258):

### NEW QUESTION # 253

Northern Trail Outfitters has these simple requirements for a data export process:

- File format should be in CSV.
- Process should be scheduled and run once per week.

- The expert should be configurable through the Salesforce UI.  
Which tool should a data architect leverage to accomplish these requirements?

- A. Data export wizard
- B. Bulk API
- C. Third-party ETL tool
- D. Data loader

**Answer: A**

Explanation:

The correct answer is B, data export wizard. The data export wizard is a tool that allows you to export your data in CSV format, schedule the export process to run once per week, and configure the export settings through the Salesforce UI. The data export wizard can handle up to 51 million records per export. The bulk API, third-party ETL tools, and data loader are also tools that can export data, but they are not as simple or user-friendly as the data export wizard.

#### NEW QUESTION # 254

Universal Containers (UC) is expecting to have nearly 5 million shipment records in its Salesforce org. Each shipment record has up to 10 child shipment item records. The Shipment custom object has an Organization-wide Default (OWD) sharing model set to Private and the Shipment Item custom object has a Master-Detail relationship to Shipment. There are 25 sharing rules set on the Shipment custom object, which allow shipment records to be shared to each of UC's 25 business areas around the globe. These sharing rules use public groups, one for each business area plus a number of groups for management and support roles. UC has a high turnover of Sales Reps and often needs to move Sales Reps between business areas in order to meet local demand. What feature would ensure that performance, when moving Sales Reps between regions, remains adequate while meeting existing requirements?

- A. Configure shipment OWD to Public Read/Write.
- B. Implement data archiving for old Shipment records.
- C. Contact Salesforce to enable Defer Sharing Rules
- D. Contact Salesforce to create Skinny tables on Shipment.

**Answer: C**

Explanation:

Contacting Salesforce to enable Defer Sharing Rules is the feature that would ensure that performance, when moving Sales Reps between regions, remains adequate while meeting existing requirements. Defer Sharing Rules allows you to defer sharing rule recalculation when you make changes to public groups or roles that are used in sharing rules. This can improve performance and avoid locking issues when you move users between groups or roles.

Implementing data archiving for old Shipment records will not help with the performance issue related to sharing rules. Contacting Salesforce to create Skinny tables on Shipment will not help with the performance issue related to sharing rules. Configuring shipment OWD to Public Read/Write will not meet the existing requirements of having a Private sharing model.

#### NEW QUESTION # 255

Universal Containers has a large number of Opportunity fields (100) that they want to track field history on. Which two actions should an architect perform in order to meet this requirement?

Choose 2 answer

- A. Select the 100 fields in the Opportunity Set History Tracking page.
- B. Create a custom object to store the previous and new field values.
- C. Create a custom object to store a copy of the record when changed.
- D. Use Analytic Snapshots to store a copy of the record when changed.

**Answer: B,C**

Explanation:

Creating a custom object to store a copy of the record when changed and creating a custom object to store the previous and new field values are two possible actions that an architect can perform to meet the requirement of tracking field history on 100 Opportunity fields. A custom object can store more fields and records than the standard field history tracking feature, which has a limit of 20 fields per object and 18 or 24 months of data retention. A custom object can also be used for reporting and analysis of

field history data. The other options are not feasible or effective for meeting the requirement

#### NEW QUESTION # 256

Universal Containers has more than 10 million records in the Order\_c object. The query has timed out when running a bulk query. What should be considered to resolve query timeout?

- A. PK Chunking
- B. Streaming API
- C. Tooling API
- D. Metadata API

**Answer: A**

Explanation:

PK Chunking can resolve query timeout when running a bulk query on an object with more than 10 million records. PK Chunking is a feature of the Bulk API that splits a query into multiple batches based on the record IDs (primary keys) of the queried object. This can improve the query performance and avoid timeouts by reducing the number of records processed in each batch.

#### NEW QUESTION # 257

Universal Containers (UC) maintains a collection of several million Account records that represent business in the United States. As a logistics company, this list is one of the most valuable and important components of UC's business, and the accuracy of shipping addresses is paramount.

Recently it has been noticed that too many of the addresses of these businesses are inaccurate, or the businesses don't exist. Which two scalable strategies should UC consider to improve the quality of their Account addresses?

- A. Leverage Data.com Clean to clean up Account address fields with the D&B database.
- B. Integrate with a third-party database or services for address validation and enrichment.
- C. Build a team of employees that validate Accounts by searching the web and making phone calls.
- D. Contact each business on the list and ask them to review and update their address information.

**Answer: A,B**

Explanation:

Integrating with a third-party database or service for address validation and enrichment is a scalable strategy that can improve the quality of the Account addresses by comparing them with a reliable source of data. Leveraging Data.com Clean to clean up Account address fields with the D&B database is another scalable strategy that can automatically update and enrich Account records with verified information from Data.com.

#### NEW QUESTION # 258
