SAP Certified Associate - Process Data Analyst - SAP Signavio Sample

Questions (Q19-Q24):

NEW QUESTION # 19

What is the first step in starting an analysis in SAP Signavio Process Intelligence?

- **A. Create a new investigation**
- B. Upload the event log
- C. Analyze Process Discovery Widget
- D. Create a new process

Answer: A

Explanation:

In SAP Signavio Process Intelligence, the analysis process begins with setting up a structured environment to examine process data. According to the SAP Signavio Process Intelligence User Guide:

* Option C (Create a new investigation): The first step in starting an analysis is to create a new investigation, which serves as the container for all related analyses, data, and widgets. An investigation defines the scope and purpose of the analysis, such as performance evaluation or conformance checking, and is required before data can be uploaded or analyzed.

* Option A (Create a new process) is incorrect because processes are modeled in SAP Signavio Process Manager, not Process Intelligence, and analysis does not start with process creation.

* Option B (Upload the event log) is incorrect as uploading an event log is a subsequent step after creating an investigation to define the data source.
