CompTIA A+ Certification Exam: Core 2 Sample Questions (Q727-Q732):

NEW QUESTION # 727

Which of the following would MOST likely be deployed to enhance physical security for a building? (Select TWO).

- A. Soft token
- B. Personal identification number
- C. Firewall
- D. Multifactor authentication

- E. Badge reader
- F. Motion sensor

Answer: E,F

Explanation:

Explanation

Badge reader and motion sensor are devices that can be deployed to enhance physical security for a building.

A badge reader is a device that scans and verifies an identification card or tag that grants access to authorized personnel only. A badge reader can help prevent unauthorized entry or intrusion into a building or a restricted area. A motion sensor is a device that detects movement and triggers an alarm or an action when motion is detected. A motion sensor can help deter or alert potential intruders or trespassers in a building or an area.

Multifactor authentication is a method of verifying identity using two or more factors, such as something you know, something you have or something you are. Multifactor authentication is not a device that can be deployed to enhance physical security for a building but a technique that can be used to enhance logical security for systems or services. Personal identification number is a numeric code that can be used as part of authentication or access control. Personal identification number is not a device that can be deployed to enhance physical security for a building but an example of something you know factor in multifactor authentication. Firewall is a device or software that filters network traffic based on rules and policies. Firewall is not a device that can be deployed to enhance physical security for a building but a device that can be used to enhance network security for systems or services. Soft token is an application or software that generates one-time passwords or codes for authentication purposes. Soft token is not a device that can be deployed to enhance physical security for a building but an example of something you have factor in multifactor authentication.

NEW QUESTION # 728

A user sent a large amount of money to a supplier's bank account and claims that the Chief Executive Officer instructed the user to do so. A technician informs the user that the request was fraudulent and contacts the authorities. Which of the following types of attack took place?

- A. Spoofing
- B. Whaling attack
- C. Insider threat
- D. Phishing

Answer: B

NEW QUESTION # 729

A company was recently attacked by ransomware. The IT department has remediated the threat and determined that the attack method used was email. Which of the following is the most effective way to prevent this issue from reoccurring?

- A. Malware prevention software
- B. Spam filtering
- C. Stateful firewall inspection
- D. End user education

Answer: D

Explanation:

To prevent ransomware attacks via email, the most effective way is End user education (D). Educating users about the dangers of phishing emails, how to recognize suspicious emails, and the importance of not clicking on unknown links or attachments can significantly reduce the risk of ransomware infections. Awareness and training can empower users to act as the first line of defense against such cyber threats

NEW QUESTION # 730

A user reports that a PC seems to be running more slowly than usual. A technician checks system resources, but disk, CPU, and memory usage seem to be fine. The technician sees that GPU temperature is extremely high. Which of the following types of malware is MOST likely to blame?

- A. Ransomware

- B. Spyware
- C. Boot sector virus
- D. Cryptominer

Answer: D

NEW QUESTION # 731

Which of the following are mobile operating systems used on smartphones? (Select two).

- A. Linux
- B. Android
- C. iOS
- D. macOS
- E. Chrome OS
- F. Windows

Answer: B,C

Explanation:

iOS and Android are the two most popular and widely used mobile operating systems for smartphones. They are both based on Unix-like kernels and provide a variety of features and applications for users and developers. iOS is developed by Apple and runs exclusively on Apple devices, such as iPhones and iPads. Android is developed by Google and runs on a range of devices from different manufacturers, such as Samsung, Huawei, and Motorola. The other options are not mobile operating systems for smartphones, but rather for other types of devices or platforms. macOS is a desktop operating system for Apple computers, such as MacBooks and iMacs. Windows is a desktop operating system for Microsoft computers, such as Surface and Dell. Chrome OS is a web-based operating system for Google devices, such as Chromebooks and Chromecast. Linux is a family of open-source operating systems for various devices and platforms, such as Ubuntu, Fedora, and Raspberry Pi.

NEW QUESTION # 732

.....

Selecting shortcut and using technique are to get better success. If you want to get security that you can pass CompTIA 220-1102 certification exam at the first attempt, ITdumpsfree CompTIA 220-1102 exam dumps is your unique and best choice.
