

Free PDF Microsoft - AZ-800 Perfect Test Voucher

P.S. Free & New AZ-800 dumps are available on Google Drive shared by DumpStillValid: <https://drive.google.com/open?id=1Z3Gx13JWrd59sNxWJV1NGYeKFWztjhN3>

Success does not come only from the future, but it continues to accumulate from the moment you decide to do it. At the moment you choose AZ-800 practice quiz, you have already taken the first step to success. The next thing you have to do is stick with it. AZ-800 Training Materials will definitely live up to your expectations. Not only our AZ-800 study materials contain the latest exam questions and answers, but also the pass rate is high as 98% to 100%.

Once you pass the exam and obtain the AZ-800 certificate, your life will take place great changes. On one hand, your job career will become more promising. All tasks will be finished excellently and efficiently because you have learned many useful skills from our AZ-800 training guide. On the other hand, you will get more opportunities to be employed by the big company and get a brighter future with the AZ-800 certification.

New Microsoft AZ-800 Test Objectives | Online AZ-800 Lab Simulation

Candidates who participate in the Microsoft practice exam should first choose our latest braindumps pdf. It will help you pass test with 100% guaranteed. Besides, our AZ-800 exam prep can help you fit the atmosphere of actual test in advance, which enable you to improve your ability with minimum time spent on AZ-800 Dumps PDF and maximum knowledge gained.

Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q218-Q223):

NEW QUESTION # 218

You have a disaggregated cluster deployment. The deployment contains a scale-out file server (SOFS) cluster that runs Windows Server and a compute cluster that has the Hyper-V role enabled.

You need to implement Storage Quality of Service (QoS). The solution must ensure that you can control the bandwidth usage between the SOFS cluster and the Hyper-V cluster.

Which cmdlet should you run on each cluster? To answer, drag the appropriate cmdlets to the correct clusters.

Each cmdlet may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

□

Answer:

Explanation:

□ Explanation:

□ In a disaggregated deployment (separate Hyper-V compute cluster and Scale-Out File Server storage cluster), Storage Quality of

Service (Storage QoS) is implemented with centralized policies that are defined on the SOFS and applied to VM virtual disks from the Hyper-V side. The Administering Windows Server Hybrid Core Infrastructure materials describe centralized Storage QoS as follows: "In a SOFS-based deployment, you create Storage QoS policies on the Scale-Out File Server. Policies define minimum and maximum IOPS

/throughput and are stored on the cluster so they can be referenced by any VM using CSV shares exposed by the SOFS." The guide further states: "To apply a Storage QoS policy to a virtual hard disk, use the Hyper-V cmdlet to set the VHD attachment and reference the policy by name or ID. The policy then governs I/O for that disk regardless of which Hyper-V host the VM runs on." Accordingly, on the SOFS cluster, you run New-StorageQosPolicy to create the centralized policy (for example, with MinimumIops, MaximumIops, or bandwidth constraints). On the Hyper-V cluster, you attach or update the VM disk to consume that policy using Set-VMHardDiskDrive (for example, -QoS PolicyID or - QoS PolicyName). The Set-VMSan cmdlet pertains to Hyper-V Virtual SAN configuration and is not used for Storage QoS. This pattern ensures you can control and cap bandwidth usage between the SOFS storage and the Hyper-V compute clusters while maintaining consistent, cluster-wide enforcement.

NEW QUESTION # 219

Your network contains two Active Directory Domain Services (AD DS) forests named contoso.com and fabrikam.com. A two-way forest trust exists between the forests. Each forest contains a single domain. The domains contain the servers shown in the following table.

You need to configure resources based constrained delegation so that the users In contoso.com can use Windows Admin Center on Server) to connect to Server? How should you complete the command? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

In the Administering Windows Server Hybrid Core Infrastructure guidance for Windows Admin Center (WAC) and Kerberos delegation, resource-based constrained delegation (RBCD) is configured on the resource's computer account, not on the client/gateway. The documentation explains that "resource-based constrained delegation is applied to the target service account; the target's msDS- AllowedToActOnBehalfOfOtherIdentity attribute contains the security principals (computers or service accounts) that are permitted to act on behalf of users." It further clarifies that "this model supports cross- domain and cross-forest scenarios when a trust exists; you specify the front-end computer (for example, a WAC gateway) from the trusted forest as an allowed principal on the resource computer in its own domain." For WAC, the gateway (Server1 in contoso.com) must be allowed to delegate to the managed node (Server2 in fabrikam.com). The study materials show the exact PowerShell interface: "Use Set-ADComputer with - PrincipalsAllowedToDelegateToAccount to populate the resource's allowed-to-act list." Therefore, the Identity parameter must reference the resource computer account (Server2 in fabrikam.com), and the PrincipalsAllowedToDelegateToAccount parameter must reference the gateway computer account (Server1 in contoso.com). Hence the correct command is:

```
Set-ADComputer -Identity (Get-ADComputer server2.fabrikam.com) -  
PrincipalsAllowedToDelegateToAccount (Get-ADComputer server1.contoso.com)
```

NEW QUESTION # 220

You have a server that runs Windows Server and has the DHCP Server role installed.

The server has a scope named Scope1 that has the following configurations:

- Address range: 192.168.0.2 to 192.168.1.255
- Mask: 255.255.254.0
- Router: 192.168.0.1
- Lease duration: 3 days
- DNS server 172.16.0.254

You have 50 Microsoft Teams Phone devices from the same vendor. All the devices have MAC addresses within the same range. You need to ensure that all the Teams Phone devices that receive a lease from Scope1 have IP addresses in the range of 192.168.1.100 to 192.168.1.200.

The solution must NOT affect other DHCP clients that receive IP configurations from Scope1.

What should you create?

- A. a policy
- B. a scope
- C. scope options

- D. a filter

Answer: A

NEW QUESTION # 221

Your network contains an Active Directory Domain Services (AD DS) domain named adatum.com. The domain contains a server named Server1 and the users shown in the following table.

- Server1 contains a folder named D:\Folder1. The advanced security settings for Folder 1 are configured as shown in the Permissions exhibit. (Click the Permissions tab.)
- Folder1 is shared by using the following configurations
 -
 -

Answer:

Explanation:

-

NEW QUESTION # 222

SIMULATION

You need to ensure that the minimum password length for members of the BranchAdmins group is 12 characters. The solution must affect only the BranchAdmins group.

To complete this task, sign in the required computer or computers.

Answer:

Explanation:

-

NEW QUESTION # 223

.....

There are also free demos of our AZ-800 study materials on the website that you can download before placing the orders. Taking full advantage of our AZ-800 practice guide and getting to know more about them means higher possibility of winning. And our AZ-800 Exam Quiz is a bountiful treasure you cannot miss. Not only the content is the latest and valid information, but also the displays are varied and interesting. Just have a try and you will love them!
