**156-215.82 Reliable Test Tutorial & 156-215.82 Free Updates**

Considered many of our customers are too busy to study, the 156-215.82 real study dumps designed by our company were according to the real exam content, which would help you cope with the 156-215.82 exam with great ease. The masses have sharp eyes, with so many rave reviews and hot sale our customers can clearly see that how excellent our 156-215.82 Exam Questions are. After carefully calculating about the costs and benefits, our 156-215.82 prep guide would be the reliable choice for you, for an ascending life. And you can free download the demo of our 156-215.82 exam questions before your payment.

## CheckPoint Check Point Certified Security Administrator - R82 Sample Questions (Q22-Q27):

### NEW QUESTION # 22

In order to see real-time and historical graph views of Security Gateway statistics in SmartView Monitor, what feature needs to be enabled on the Security Gateway?

- **A. Monitoring Blade**
- B. SNMP
- C. None - the data is available by default
- D. Logging & Monitoring

**Answer: A**

Explanation:

In order to see real-time and historical graph views of Security Gateway statistics in SmartView Monitor, the Monitoring Blade feature needs to be enabled on the Security Gateway. The Monitoring Blade is a software blade that collects and displays network and security performance data from the Security Gateway, such as traffic, throughput, connections, CPU usage, memory usage, etc. The Monitoring Blade can be enabled or disabled on each Security Gateway from the SmartConsole. [Monitoring Blade], [SmartView Monitor]

### NEW QUESTION # 23

What are the three deployment considerations for a secure network?

- A. Bridge Mode, Remote, and Standalone
- B. Standalone, Distributed, and Bridge Mode
- **C. Remote, Standalone, and Distributed**
- D. Distributed, Bridge Mode, and Remote

**Answer: C**

Explanation:

The three deployment considerations for a secure network are Remote, Standalone, and Distributed. Remote deployment means that the Security Management Server and Security Gateway are installed on different machines. Standalone deployment means that the Security Management Server and Security Gateway are installed on the same machine. Distributed deployment means that there are multiple Security Gateways managed by one or more Security Management Servers. Therefore, the correct answer is C. Remote, Standalone, and Distributed.

### NEW QUESTION # 24

Most Check Point deployments use Gaia but which product deployment utilizes special Check Point code (with unification in R81.10)?

- **A. Scalable Platforms**
- B. Rugged Appliances
- C. Small Business and Branch Office Appliances
- D. Enterprise Network Security Appliances

**Answer: A**

Explanation:

Most Check Point deployments use Gaia, which is a unified operating system for all Check Point appliances, open servers, and virtualized gateways. However, some product deployments utilize special Check Point code, such as Scalable Platforms (formerly known as Maestro), which are high-performance security gateways that can scale up to 1.5 Tbps of firewall throughput. Scalable

Platforms use a special version of Gaia OS called Gaia Embedded, which is planned to be unified with Gaia OS in R81.102. Check Point R81 Release Notes

#### NEW QUESTION # 25

Fill in the blank: Browser-based Authentication sends users to a web page to acquire identities using \_\_\_\_\_.

- A. User Directory
- B. UserCheck
- C. Captive Portal and Transparent Kerberos Authentication
- D. Captive Portal

**Answer: C**

Explanation:

Browser-based Authentication sends users to a web page to acquire identities using Captive Portal and Transparent Kerberos Authentication. Captive Portal is a web page that prompts users to enter their credentials. Transparent Kerberos Authentication is a method that automatically authenticates users who have a valid Kerberos ticket from the Active Directory domain controller. UserCheck is a feature that allows users to interact with the security policy, not a method of authentication. User Directory is a component that integrates with external user databases, not a web page for authentication. Captive Portal alone is not enough to fill in the blank, as it is only one of the methods used by Browser-based Authentication.

#### NEW QUESTION # 26

What is NOT an advantage of Stateful Inspection?

- A. Transparency
- B. No Screening above Network layer
- C. High Performance
- D. Good Security

**Answer: B**

Explanation:

The option that is NOT an advantage of Stateful Inspection is No Screening above Network layer. Stateful Inspection is a firewall technology that inspects packets at all layers of the OSI model, from layer 3 (Network) to layer 7 (Application). Stateful Inspection provides screening above Network layer, such as checking TCP flags, sequence numbers, ports, and application protocols. The other options are advantages of Stateful Inspection, as it provides high performance, good security, and transparency for legitimate traffic.

#### NEW QUESTION # 27

.....

The Check Point Certified Security Administrator - R82 (156-215.82) exam preparation material is available in three different formats for the customers. The formats are PDF format, web-based software, and CheckPoint 156-215.82 desktop practice exam software.
